Map a region of the dataspace.
- virtual int [map_hook](#) (Dataspace::Offset offs, unsigned order, Dataspace::Flags flags, Dataspace::Map_addr *base, unsigned *send_order)
A hook that is called for acquiring the data to be mapped.
- virtual void [take](#) () noexcept
Take a reference to this dataspace.
- virtual unsigned long [release](#) () noexcept
Release a reference to this dataspace.
- virtual long [copy](#) ([l4_addr_t](#) dst_offs, [l4_umword_t](#) src_id, [l4_addr_t](#) src_offs, unsigned long size) noexcept
Copy from src dataspace to this destination dataspace.
- virtual long [clear](#) (unsigned long offs, unsigned long size) const noexcept
Clear a region in the dataspace.
- virtual long [allocate](#) ([l4_addr_t](#) offset, [l4_size_t](#) size, unsigned access) noexcept
Allocate a region within a dataspace.
- virtual unsigned long [page_shift](#) () const noexcept
Define the size of the flexpage to map.
- virtual bool [is_static](#) () const noexcept
Return whether the dataspace is static.
- virtual long [map_info](#) ([l4_addr_t](#) &start_addr, [l4_addr_t](#) &end_addr) noexcept
Return mapping information for no-MMU systems.

16.291.1 Detailed Description

[Dataspace](#) server class.

The default implementation of the interface provides a continuous dataspace with contiguous pages.

Definition at line 29 of file [dataspace_svr](#).

16.291.2 Member Function Documentation

16.291.2.1 [allocate\(\)](#)

```
virtual long L4Re::Util::Dataspace_svr::allocate (
    l4\_addr\_t offset,
    l4\_size\_t size,
    unsigned access ) [inline], [virtual], [noexcept]
```

Allocate a region within a dataspace.

Parameters

| | |
|---------------|---|
| <i>offset</i> | Offset in the dataspace, in bytes. |
| <i>size</i> | Size of the range, in bytes. |
| <i>access</i> | Access mode with which the memory backing the dataspace region should be allocated. |

Return values

| | |
|----|---------|
| 0 | Success |
| <0 | Error |

Definition at line 224 of file [dataspace_svr](#).

References [L4_ENODEV](#).

16.291.2.2 clear()

```
virtual long L4Re::Util::Dataspace_svr::clear (
    unsigned long offs,
    unsigned long size ) const [inline], [virtual], [noexcept]
```

Clear a region in the dataspace.

Parameters

| | |
|-------------|---------------------|
| <i>offs</i> | Start of the region |
| <i>size</i> | Size of the region |

Return values

| | |
|----|---------|
| 0 | Success |
| <0 | Error |

Definition at line 192 of file [dataspace_svr](#).

References [L4_ERANGE](#).

16.291.2.3 copy()

```
virtual long L4Re::Util::Dataspace_svr::copy (
    l4_addr_t dst_offs,
    l4_umword_t src_id,
    l4_addr_t src_offs,
    unsigned long size ) [inline], [virtual], [noexcept]
```

Copy from src dataspace to this destination dataspace.

Parameters

| | |
|-----------------|---------------------------------------|
| <i>dst_offs</i> | Offset into the destination dataspace |
| <i>src_id</i> | Local id of the source dataspace |
| <i>src_offs</i> | Offset into the source dataspace |
| <i>size</i> | Number of bytes to copy |

Return values

| | |
|----------|---|
| ≥ 0 | Number of bytes copied |
| < 0 | An error occurred. The error code may depend on the implementation. |

Definition at line 175 of file [dataspace_svr](#).

References [L4_ENODEV](#).

16.291.2.4 is_static()

```
virtual bool L4Re::Util::Dataspace_svr::is_static ( ) const [inline], [virtual], [noexcept]
```

Return whether the dataspace is static.

Returns

True if dataspace is static

Definition at line 244 of file [dataspace_svr](#).

16.291.2.5 map()

```
int L4Re::Util::Dataspace_svr::map (
    Dataspace::Offset offset,
    Dataspace::Map_addr local_addr,
    Dataspace::Flags flags,
    Dataspace::Map_addr min_addr,
    Dataspace::Map_addr max_addr,
    L4::Ipc::Snd_fpage & memory ) [inline]
```

Map a region of the dataspace.

Parameters

| | | |
|-----|-------------------|--|
| | <i>offset</i> | Offset to start within data space |
| | <i>local_addr</i> | Local address to map to. |
| | <i>flags</i> | Dataspace flags, see L4Re::Dataspace::F::Flags . |
| | <i>min_addr</i> | Defines start of receive window. |
| | <i>max_addr</i> | Defines end of receive window. |
| out | <i>memory</i> | Send fpage to map |

Return values

| | |
|-------|---------|
| 0 | Success |
| < 0 | Error |

Definition at line 57 of file [dataspace_svr](#).

References [L4_EOK](#), [L4_ERANGE](#), [l4_fpage\(\)](#), [L4_PAGESHIFT](#), [l4_round_page\(\)](#), [l4_trunc_page\(\)](#), [l4_trunc_size\(\)](#), and [map_hook\(\)](#).

Here is the call graph for this function:

16.291.2.6 map_hook()

```

virtual int L4Re::Util::Dataspace_svr::map_hook (
    Dataspace::Offset offs,
    unsigned order,
    Dataspace::Flags flags,
    Dataspace::Map_addr * base,
    unsigned * send_order ) [inline], [virtual]
  
```

A hook that is called for acquiring the data to be mapped.

Parameters

| | |
|-------------------|---|
| <i>offs</i> | Offset in dataspace to supply |
| <i>order</i> | Log2-size of data to supply |
| <i>flags</i> | Flags for the mapping |
| <i>base</i> | Start address of the flexpage to be mapped |
| <i>send_order</i> | Order (log2 of size) of the flexpage to be mapped |

Return values

| | |
|-----|--|
| <0 | Error and the map request will be aborted with that error. |
| >=0 | Success |

See also

[map](#)

Definition at line 136 of file [dataspace_svr](#).

Referenced by [map\(\)](#).

Here is the caller graph for this function:

16.291.2.7 map_info()

```
virtual long L4Re::Util::Dataspace_svr::map_info (
    l4_addr_t & start_addr,
    l4_addr_t & end_addr ) [inline], [virtual], [noexcept]
```

Return mapping information for no-MMU systems.

The method is only called on no-MMU systems. It should return the address of the underlying backing buffer so that the caller might map the dataspace.

The default implementation always returns an error because the derived class must provide the required information.

16.291.2.8 page_shift()

```
virtual unsigned long L4Re::Util::Dataspace_svr::page_shift ( ) const [inline], [virtual],
[noexcept]
```

Define the size of the flexpage to map.

Returns

flexpage size

Definition at line 236 of file [dataspace_svr](#).

References [L4_LOG2_PAGESIZE](#).

16.291.2.9 release()

```
virtual unsigned long L4Re::Util::Dataspace_svr::release ( ) [inline], [virtual], [noexcept]
```

Release a reference to this dataspace.

Returns

Number of references to the dataspace

Default does nothing and returns always zero.

Definition at line 160 of file [dataspace_svr](#).

16.291.2.10 take()

```
virtual void L4Re::Util::Dataspace_svr::take ( ) [inline], [virtual], [noexcept]
```

Take a reference to this dataspace.

Default does nothing.

Definition at line 150 of file [dataspace_svr](#).

`int init (L4::Cap< L4Re::Event > event, L4Re::Env const *env=L4Re::Env::env(), L4Re::Cap_alloc *ca=&L4Re::Util::cap_alloc)`
Initialise an event object.
- `int init_poll (L4::Cap< L4Re::Event > event, L4Re::Env const *env=L4Re::Env::env(), L4Re::Cap_alloc *ca=&L4Re::Util::cap_alloc)`
Initialise an event object in polling mode.
- `L4Re::Event_buffer_t< PAYLOAD > & buffer ()`
Get event buffer.
- `L4::Cap< L4::Triggerable > irq () const`
Get event IRQ.

16.295.1 Detailed Description

```
template<typename PAYLOAD>
class L4Re::Util::Event_t< PAYLOAD >
```

Convenience wrapper for getting access to an event object.

After calling `init()` the class supplies the event-buffer and the associated IRQ object.

Definition at line 32 of file `event`.

16.295.2 Member Enumeration Documentation

16.295.2.1 Mode

```
template<typename PAYLOAD >
enum L4Re::Util::Event_t::Mode
```

Modes of operation.

Enumerator

| | |
|--------------|---|
| Mode_irq | Create an IRQ and attach, to get notifications. |
| Mode_polling | Do not use an IRQ. |

Definition at line 38 of file `event`.

16.295.3 Member Function Documentation

16.295.3.1 buffer()

```
template<typename PAYLOAD >
L4Re::Event_buffer_t< PAYLOAD > & L4Re::Util::Event_t< PAYLOAD >::buffer ( ) [inline]
```

Get event buffer.

Returns

[Event](#) buffer object.

Definition at line 148 of file [event](#).

16.295.3.2 init()

```
template<typename PAYLOAD >
template<typename IRQ_TYPE >
int L4Re::Util::Event_t< PAYLOAD >::init (
    L4::Cap< L4Re::Event > event,
    L4Re::Env const * env = L4Re::Env::env(),
    L4Re::Cap_alloc * ca = &L4Re::Util::cap_alloc ) [inline]
```

Initialise an event object.

Template Parameters

| | |
|-----------------|---|
| <i>IRQ_TYPE</i> | Type used for handling notifications from the event provider. This must be derived from L4::Triggerable . |
|-----------------|---|

Parameters

| | |
|--------------|----------------------------------|
| <i>event</i> | Capability to event. |
| <i>env</i> | Pointer to L4Re-Environment |
| <i>ca</i> | Pointer to capability allocator. |

Return values

| | |
|------------|--|
| 0 | Success |
| -L4_ENOMEM | No memory to allocate required capabilities. |
| <0 | Other IPC errors. |

Definition at line 59 of file [event](#).

Additional Inherited Members

Public Types inherited from `cxx::String`

- typedef char const * **Index**
Character index type.

Public Member Functions inherited from `cxx::String`

- **String** (char const *s) noexcept
Initialize from a zero-terminated string.
- **String** (char const *s, unsigned long len) noexcept
Initialize from a pointer to first character and a length.
- **String** (char const *s, char const *e) noexcept
Initialize with start and end pointer.
- **String** ()
Zero-initialize. Create an invalid string.
- **Index start** () const
Pointer to first character.

- **Index** **end** () const
Pointer to first byte behind the string.
- int **len** () const
Length.
- void **start** (char const *s)
Set start.
- void **len** (unsigned long len)
Set length.
- bool **empty** () const
Check if the string has length zero.
- **String** **head** (**Index** **end**) const
Return prefix up to index.
- **String** **head** (unsigned long **end**) const
*Prefix of length **end**.*
- **String** **substr** (unsigned long idx, unsigned long **len**=~0UL) const
*Substring of length **len** starting at **idx**.*
- **String** **substr** (char const ***start**, unsigned long **len**=0) const
*Substring of length **len** starting at **start**.*
- template<typename F >
char const * **find_match** (F &&match) const
*Find matching character. **match** should be a function such as **isspace**.*
- char const * **find** (char const *c) const
*Find character. Return **end()** if not found.*
- char const * **find** (int c) const
*Find character. Return **end()** if not found.*
- char const * **rfind** (char const *c) const
*Find right-most character. Return **end()** if not found.*
- **Index** **starts_with** (cxx::String const &c) const
*Check if **c** is a prefix of string.*
- char const * **find** (int c, char const *s) const
*Find character **c** starting at position **s**. Return **end()** if not found.*
- char const * **find** (char const *c, char const *s) const
Find character set at position.
- char const & **operator[]** (unsigned long idx) const
*Get character at **idx**.*
- char const & **operator[]** (int idx) const
*Get character at **idx**.*
- char const & **operator[]** (**Index** idx) const
*Get character at **idx**.*
- bool **eof** (char const *s) const
*Check if pointer **s** points behind string.*
- template<typename INT >
int **from_dec** (INT *v) const
Convert decimal string to integer.
- template<typename INT >
int **from_hex** (INT *v) const
Convert hex string to integer.
- bool **operator==** (**String** const &o) const
Equality.
- bool **operator!=** (**String** const &o) const
Inequality.

[Name](#) class.

Definition at line 28 of file [name_space_svr](#).

The documentation for this class was generated from the following file:

- [l4/re/util/name_space_svr](#)

16.298 L4Re::Util::Names::Name_space Class Reference

Abstract server-side implementation of the L4::Namespace interface.

```
#include <name_space_svr>
```

Collaboration diagram for L4Re::Util::Names::Name_space:

Public Member Functions

- virtual **~Name_space** ()
The destructor of the derived class is responsible for freeing resources.

Protected Member Functions

- virtual Entry * **alloc_dynamic_entry** (Name const &n, unsigned flags)=0
Allocate a new entry for the given name.
- virtual void **free_dynamic_entry** (Entry *e)=0
Free an entry previously allocated with [alloc_dynamic_entry\(\)](#).
- virtual int **get_epiface** (l4_umword_t data, bool is_local, L4::Epiface **lo)=0
Return a pointer to the epiface assigned to a given label.
- virtual int **copy_receive_cap** (L4::Cap< void > *cap)=0
Return the receive capability for permanent use.
- virtual void **free_capability** (L4::Cap< void > cap)=0
Free a capability previously acquired with [copy_receive_cap\(\)](#).
- virtual void **free_epiface** (L4::Epiface *epiface)=0
Free epiface previously acquired with [get_epiface\(\)](#).

16.298.1 Detailed Description

Abstract server-side implementation of the L4::Namespace interface.

Note

The derived class is responsible for resource management through the provided interfaces. This includes freeing all resources on destruction!

Definition at line 180 of file [name_space_svr](#).

16.298.2 Member Function Documentation

16.298.2.1 alloc_dynamic_entry()

```
virtual Entry * L4Re::Util::Names::Name_space::alloc_dynamic_entry (
    Name const & n,
    unsigned flags ) [protected], [pure virtual]
```

Allocate a new entry for the given name.

Parameters

| | |
|--------------|--|
| <i>n</i> | Name of the entry, must be copied. |
| <i>flags</i> | Entry flags, see Obj::Flags . |

Returns

A pointer to the newly allocated entry or NULL on error.

This method is called when a new entry was received. It must allocate memory, copy *n* out of the receive buffer and wrap everything in an Entry.

Referenced by [free_epiface\(\)](#).

Here is the caller graph for this function:

16.298.2.2 copy_receive_cap()

```
virtual int L4Re::Util::Names::Name_space::copy_receive_cap (
    L4::Cap< void > * cap ) [protected], [pure virtual]
```

Return the receive capability for permanent use.

Parameters

| | | |
|-----|------------|--|
| out | <i>cap</i> | Capability slot with the received capability. Must be permanently available until free_capability() is called. |
|-----|------------|--|

This method is called when a new entry is registered together with a capability mapping. It must decide whether and where to store the capability and return the final capability slot. Typical implementations return the capability slot in the receive window and allocate a new receive window.

16.298.2.3 free_capability()

```
virtual void L4Re::Util::Names::Name_space::free_capability (
    L4::Cap< void > cap ) [protected], [pure virtual]
```

Free a capability previously acquired with [copy_receive_cap\(\)](#).

Parameters

| | | |
|----|------------|---------------------|
| in | <i>cap</i> | Capability to free. |
|----|------------|---------------------|

Counterpart of [copy_receive_cap](#). Free the capability slot when the entry is deleted or changed.

Referenced by [free_epiface\(\)](#).

Here is the caller graph for this function:

**16.298.2.4 free_dynamic_entry()**

```
virtual void L4Re::Util::Names::Name_space::free_dynamic_entry (
    Entry * e ) [protected], [pure virtual]
```

Free an entry previously allocated with [alloc_dynamic_entry\(\)](#).

Parameters

| | |
|----------|----------------|
| <i>e</i> | Entry to free. |
|----------|----------------|

Referenced by [free_epiface\(\)](#).

Here is the caller graph for this function:

16.298.2.5 free_epiface()

```
virtual void L4Re::Util::Names::Name_space::free_epiface (
    L4::Epiface * epiface ) [protected], [pure virtual]
```

Free epiface previously acquired with [get_epiface\(\)](#).

Parameters

| | | |
|----|----------------|------------------|
| in | <i>epiface</i> | Epiface to free. |
|----|----------------|------------------|

Called when an entry that points to an epiface is deleted allowing implementations that hold resources to free them.

References [alloc_dynamic_entry\(\)](#), [free_capability\(\)](#), [free_dynamic_entry\(\)](#), [free_epiface\(\)](#), [L4_BASE_TASK_CAP](#), [L4_EEXIST](#), [L4_ENOMEM](#), and [L4Re::Namespace::Overwrite](#).

Referenced by [free_epiface\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.298.2.6 get_epiface()

```
virtual int L4Re::Util::Names::Name_space::get_epiface (
    l4_umword_t data,
    bool is_local,
    L4::Epiface ** lo ) [protected], [pure virtual]
```

Return a pointer to the epiface assigned to a given label.

Parameters

| | | |
|-----|-----------------|--|
| in | <i>data</i> | Label or in the local case the capability slot of the receiving capability. |
| in | <i>is_local</i> | If true, a local capability slot was supplied, if false the label of a locally bound IPC gate. |
| out | <i>lo</i> | Pointer to epiface responsible for the capability. |

Returns

[L4_EOK](#) if a valid interface could be found or an error message otherwise.

This method is called when a new entry is registered and some local ID was received for the capability. In this case, the generic implementation needs to get the epiface in order to get the capability.

The callee must make sure that the epiface remains valid until `free_epiface` is called. In particular, the capability slot must not be reallocated as long as the namespace server holds a reference to the epiface.

The documentation for this class was generated from the following file:

- `l4/re/util/name_space_svr`

16.299 L4Re::Util::Object_registry Class Reference

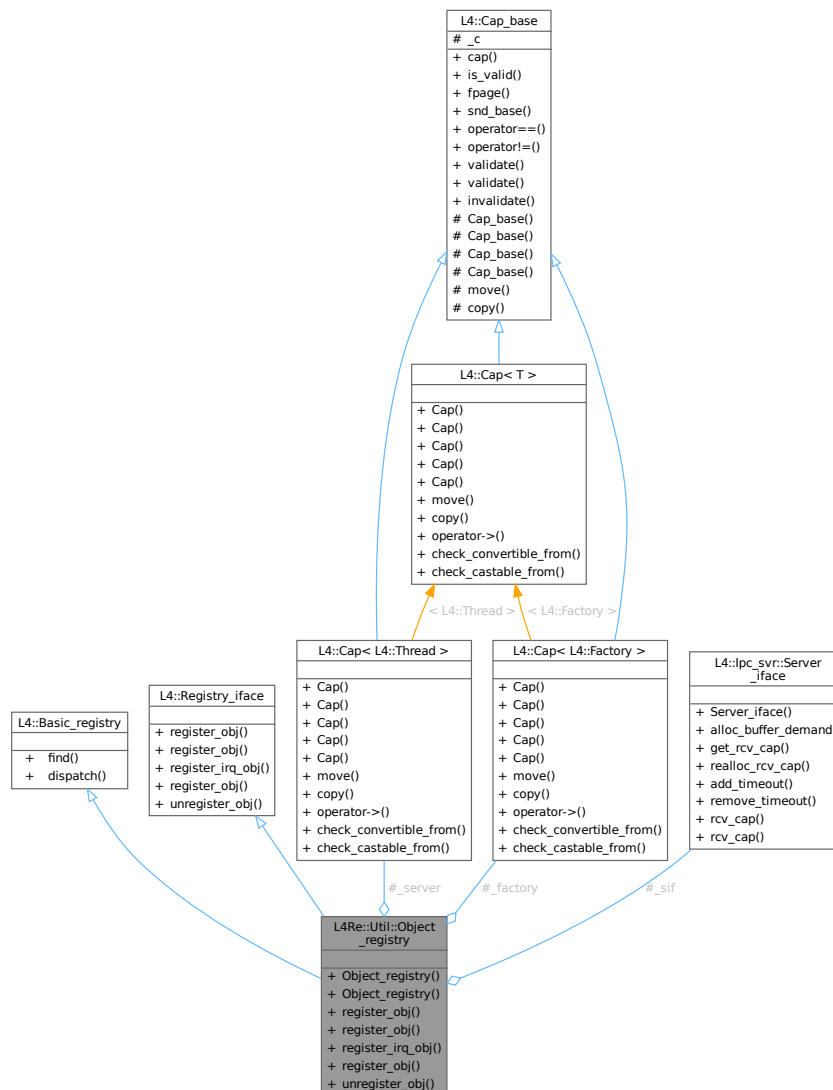

A registry that manages server objects and their attached IPC gates for a single server loop for a specific thread.

```
#include <object_registry>
```

Inheritance diagram for L4Re::Util::Object_registry:

Collaboration diagram for L4Re::Util::Object_registry:

Public Member Functions

- `Object_registry (L4::lpc_svr::Server_iface *sif)`
Create a registry for the main thread of the task using the default factory.
- `Object_registry (L4::lpc_svr::Server_iface *sif, L4::Cap< L4::Thread > server, L4::Cap< L4::Factory > factory)`
Create a registry for arbitrary threads.
- `L4::Cap< void > register_obj (L4::Epiface *o, char const *service)` override
Register a new server object to a pre-allocated receive endpoint.
- `L4::Cap< void > register_obj (L4::Epiface *o)` override
Register a new server object on a newly allocated capability.
- `L4::Cap< L4::Irq > register_irq_obj (L4::Epiface *o)` override
Register a handler for an interrupt.
- `L4::Cap< L4::Rcv_endpoint > register_obj (L4::Epiface *o, L4::Cap< L4::Rcv_endpoint > ep)` override

Register a handler for an already existing interrupt.

- void [unregister_obj](#) ([L4::Epiface](#) *o, bool unmap=true) override

Remove a server object from the handler list.

Additional Inherited Members

Static Public Member Functions inherited from [L4::Basic_registry](#)

- static [Value](#) * [find](#) ([l4_umword_t](#) label)

Get the server object for an [lpc_gate](#) label.

- static [l4_msgtag_t](#) [dispatch](#) ([l4_msgtag_t](#) tag, [l4_umword_t](#) label, [l4_utcb_t](#) *utcb)

The dispatch function called by the server loop.

16.299.1 Detailed Description

A registry that manages server objects and their attached IPC gates for a single server loop for a specific thread.

This class manages most of the setup of a server object. If necessary, an IPC gate is created, the specified thread is bound to the IPC gate. Incoming IPC is dispatched to the server object based on the label of the IPC gate.

The object registry is also able to manage IRQ endpoints. They require a different method for the object creation. Otherwise they are handled in the same way as IPC gates: a server object is responsible to process the incoming interrupts.

Definition at line 41 of file [object_registry](#).

16.299.2 Constructor & Destructor Documentation

16.299.2.1 [Object_registry\(\)](#) [1/2]

```
L4Re::Util::Object_registry::Object_registry (
    L4::Ipc\_svr::Server\_iface * sif ) [inline], [explicit]
```

Create a registry for the main thread of the task using the default factory.

Parameters

| | |
|------------|------------------------|
| <i>sif</i> | Server loop interface. |
|------------|------------------------|

Definition at line 67 of file [object_registry](#).

16.299.2.2 [Object_registry\(\)](#) [2/2]

```
L4Re::Util::Object_registry::Object_registry (
    L4::Ipc\_svr::Server\_iface * sif,
    L4::Cap< L4::Thread > server,
    L4::Cap< L4::Factory > factory ) [inline]
```

Create a registry for arbitrary threads.

Parameters

| | |
|----------------|---|
| <i>sif</i> | Server loop interface. |
| <i>server</i> | Capability to the thread that executes the server objects. |
| <i>factory</i> | Capability to a factory object capable of creating new IPC gates. |

Definition at line 81 of file [object_registry](#).

16.299.3 Member Function Documentation

16.299.3.1 register_irq_obj()

```
L4::Cap< L4::Irq > L4Re::Util::Object_registry::register_irq_obj (
    L4::Epiface * o ) [inline], [override], [virtual]
```

Register a handler for an interrupt.

Parameters

| | |
|----------|----------------------------------|
| <i>o</i> | Server object that handles IRQs. |
|----------|----------------------------------|

Return values

| | |
|--|--|
| <i>L4::Cap<L4::Irq></i> | Capability to a new IRQ object on success. |
| <i>L4::Cap<L4::Irq>::Invalid</i> | The allocation of the IRQ has failed. |

The IRQ will be newly allocated using the registry's factory object. The caller must call [unregister_obj\(\)](#) to free all resources.

Implements [L4::Registry_iface](#).

Definition at line 227 of file [object_registry](#).

16.299.3.2 register_obj() [1/3]

```
L4::Cap< void > L4Re::Util::Object_registry::register_obj (
    L4::Epiface * o ) [inline], [override], [virtual]
```

Register a new server object on a newly allocated capability.

Parameters

| | |
|----------|--|
| <i>o</i> | Server object that handles IPC requests. |
|----------|--|

Return values

| | |
|-------------------------------------|--|
| <i>L4::Cap<void></i> | A valid capability to a new IPC gate. |
| <i>L4::Cap<void>::Invalid</i> | The allocation of the IPC gate has failed. |

The IPC gate will be allocated using the registry's factory. The caller must call [unregister_obj\(\)](#) to free all resources.

Implements [L4::Registry_iface](#).

Definition at line 211 of file [object_registry](#).

16.299.3.3 register_obj() [2/3]

```
L4::Cap< void > L4Re::Util::Object_registry::register_obj (
    L4::Epiface * o,
    char const * service ) [inline], [override], [virtual]
```

Register a new server object to a pre-allocated receive endpoint.

Parameters

| | |
|----------------|---|
| <i>o</i> | Server object that handles IPC requests. |
| <i>service</i> | Name of a pre-allocated receive endpoint. |

Return values

| | |
|-------------------------------------|--|
| <i>L4::Cap<void></i> | The capability known as <i>service</i> on success. |
| <i>L4::Cap<void>::Invalid</i> | No capability with the given name found. |

The interface must be freed with [unregister_obj\(\)](#) by the caller to unbind the thread from the capability.

Implements [L4::Registry_iface](#).

Examples

[examples/clntsrv/src/server.cc](#), and [examples/libs/l4re/streammap/server.cc](#).

Definition at line 194 of file [object_registry](#).

16.299.3.4 register_obj() [3/3]

```
L4::Cap< L4::Rcv_endpoint > L4Re::Util::Object_registry::register_obj (
    L4::Epiface * o,
    L4::Cap< L4::Rcv_endpoint > ep ) [inline], [override], [virtual]
```

Register a handler for an already existing interrupt.

Parameters

| | |
|-----------|---|
| <i>o</i> | Server object that handles the IPC. |
| <i>ep</i> | Capability to a receive endpoint, may be a hardware or software interrupt or an IPC gate. |

Return values

| | |
|---|--------------------------------------|
| <code>L4::Cap<L4::Rcv_endpoint></code> | Capability ep on success. |
| <code>L4::Cap<L4::Rcv_endpoint>::Invalid</code> | The IRQ attach operation has failed. |

The interface must be freed with [unregister_obj\(\)](#) by the caller to unbind the thread from the capability.

Implements [L4::Registry_iface](#).

Definition at line 249 of file [object_registry](#).

16.299.3.5 unregister_obj()

```
void L4Re::Util::Object_registry::unregister_obj (
    L4::Epiface * o,
    bool unmap = true ) [inline], [override], [virtual]
```

Remove a server object from the handler list.

Parameters

| | |
|--------------|--|
| <i>o</i> | Server object to unbind. |
| <i>unmap</i> | Specifies if the object capability shall be unmapped (true) or not. The default (true) is to unmap the capability. |

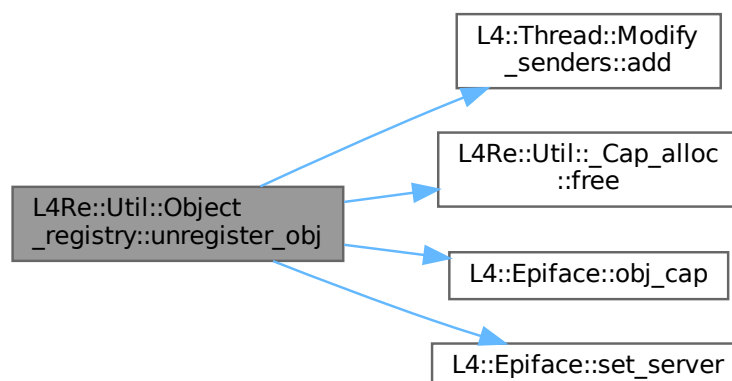

The capability used by the server object will be unmapped if *unmap* is true.

Implements [L4::Registry_iface](#).

Definition at line 265 of file [object_registry](#).

References [L4::Thread::Modify_senders::add\(\)](#), [L4Re::Util::cap_alloc](#), [L4Re::Util::_Cap_alloc::free\(\)](#), [L4_FP_ALL_SPACES](#), [L4::Epiface::obj_cap\(\)](#), and [L4::Epiface::set_server\(\)](#).

Here is the call graph for this function:

The documentation for this class was generated from the following file:

- l4/re/util/object_registry

16.300 L4Re::Util::Ref_cap< T > Struct Template Reference

Automatic capability that implements automatic free and unmap of the capability selector.

```
#include <cap_alloc>
```

Collaboration diagram for L4Re::Util::Ref_cap< T >:

16.300.1 Detailed Description

```
template<typename T>
struct L4Re::Util::Ref_cap< T >
```

Automatic capability that implements automatic free and unmap of the capability selector.

Template Parameters

| | |
|----------|--|
| T | Type of the object that is referred by the capability. |
|----------|--|

This kind of automatic capability implements a counted reference to a capability selector. The capability shall be unmapped and freed when the reference count in the allocator goes to zero.

Usage:

```

L4Re::Util::Ref_cap<L4Re::Dataspace>::Cap global_ds_cap;

{
    L4Re::Util::Ref_cap<L4Re::Dataspace>::Cap
        ds_cap(L4Re::Util::cap_alloc.alloc<L4Re::Dataspace>());
    // reference count for the allocated cap selector is now 1

    // use the dataspace cap
    L4Re::chksys(mem_alloc->alloc(4096, ds_cap.get()));

    global_ds_cap = ds_cap;
    // reference count is now 2
    ...
}
// reference count dropped to 1 (ds_cap is no longer existing).
  
```

Definition at line 142 of file [cap_alloc](#).

The documentation for this struct was generated from the following file:

- [l4/re/util/cap_alloc](#)

16.301 L4Re::Util::Ref_del_cap< T > Struct Template Reference

Automatic capability that implements automatic free and unmap+delete of the capability selector.

```
#include <cap_alloc>
```

Collaboration diagram for L4Re::Util::Ref_del_cap< T >:

16.301.1 Detailed Description

```
template<typename T>
struct L4Re::Util::Ref_del_cap< T >
```

Automatic capability that implements automatic free and unmap+delete of the capability selector.

Template Parameters

| | |
|----------|--|
| <i>T</i> | Type of the object that is referred by the capability. |
|----------|--|

This kind of automatic capability implements a counted reference to a capability selector. The capability shall be unmapped and freed when the reference count in the allocator goes to zero. The main difference to [Ref_cap](#) is that the unmap is done with the deletion flag enabled and this leads to the deletion of the object if the current task holds appropriate deletion rights.

Usage:

```
L4Re::Util::Ref_del_cap<L4Re::Dataspace>::Cap global_ds_cap;

{
    L4Re::Util::Ref_del_cap<L4Re::Dataspace>::Cap
        ds_cap(L4Re::Util::cap_alloc.alloc<L4Re::Dataspace>());
    // reference count for the allocated cap selector is now 1

    // use the dataspace cap
}
```

```
L4Re::chksys(mem_alloc->alloc(4096, ds_cap.get()));

global_ds_cap = ds_cap;
// reference count is now 2
...
}
// reference count dropped to 1 (ds_cap is no longer existing).
...
global_ds_cap = L4_INVALID_CAP;
// reference count dropped to 0 (data space shall be deleted).
```

Definition at line 183 of file [cap_alloc](#).

16.302 L4Re::Util::Registry_server< LOOP_HOOKS > Class Template Reference

A server loop object which has a [Object_registry](#) included.

```
#include <object_registry>
```

Inheritance diagram for L4Re::Util::Registry_server< LOOP_HOOKS >:

Collaboration diagram for L4Re::Util::Registry_server< LOOP_HOOKS >:

Public Member Functions

- [Registry_server\(\)](#)
Create a new server loop object for the main thread of the task.
- [Registry_server](#) (`l4_utcb_t *`, `L4::Cap< L4::Thread > server`, `L4::Cap< L4::Factory > factory`)
Create a new server loop object for an arbitrary thread and factory.
- [Registry_server](#) (`L4::Cap< L4::Thread > server`, `L4::Cap< L4::Factory > factory`)
Create a new server loop object for an arbitrary thread and factory.

- [Object_registry](#) const * **registry** () const
Return registry of this server loop.
- [Object_registry](#) * **registry** ()
Return registry of this server loop.
- void [L4_NORETURN loop](#) ([l4_utcb_t](#) *utcb=[l4_utcb](#)())
Start the server loop.
- template<typename Printer >
void [L4_NORETURN loop_dbg](#) (Printer printer, [l4_utcb_t](#) *utcb=[l4_utcb](#)())
Start the server loop with error printing.

Public Member Functions inherited from [L4::Server< LOOP_HOOKS >](#)

- [Server](#) ([l4_utcb_t](#) *)
Initializes the server loop.
- **Server** ()
Initializes the server loop.
- template<typename DISPATCH >
[L4_NORETURN](#) void [internal_loop](#) (DISPATCH dispatch, [l4_utcb_t](#) *)
The server loop.
- template<typename R >
[L4_NORETURN](#) void [loop_noexc](#) (R r, [l4_utcb_t](#) *u=[l4_utcb](#)())
Server loop without exception handling.
- template<typename EXC , typename R >
[L4_NORETURN](#) void [loop](#) (R r, [l4_utcb_t](#) *u=[l4_utcb](#)())
Server loop with internal exception handling.
- template<typename EXC , typename R , typename Printer >
[L4_NORETURN](#) void [loop_dbg](#) (R r, Printer p, [l4_utcb_t](#) *u=[l4_utcb](#)())
Server loop with internal exception handling including message printing.

Public Member Functions inherited from [L4::lpc_svr::Br_manager_no_buffers](#)

- int [alloc_buffer_demand](#) ([Demand](#) const &demand) override
Tells the server to allocate buffers for the given demand.
- [L4::Cap< void >](#) [get_rcv_cap](#) (int) const override
Returns [L4::Cap< void >::Invalid](#), we have no buffer management.
- int [realloc_rcv_cap](#) (int) override
Returns -L4_ENOMEM, we have no buffer management.
- int [add_timeout](#) ([Timeout](#) *, [l4_kernel_clock_t](#)) override
Returns -L4_ENOSYS, we have no timeout queue.
- int [remove_timeout](#) ([Timeout](#) *) override
Returns -L4_ENOSYS, we have no timeout queue.

Public Member Functions inherited from [L4::lpc_svr::Server_iface](#)

- **Server_iface** ()
Make a server interface.
- template<typename T >
[L4::Cap< T >](#) [rcv_cap](#) (int index) const
Get given receive buffer as typed capability.
- [L4::Cap< void >](#) [rcv_cap](#) (int index) const
Get receive cap with the given index as generic (void) type.

Additional Inherited Members

Public Types inherited from L4::lpc_svr::Server_iface

- typedef L4::Type_info::Demand Demand
Data type expressing server-side demand for receive buffers.

Protected Member Functions inherited from L4::Server< LOOP_HOOKS >

- `l4_msgtag_t reply_n_wait (l4_msgtag_t reply, l4_umword_t *p, l4_utcb_t *)`
Internal implementation for reply and wait.

Protected Member Functions inherited from L4::lpc_svr::Br_manager_no_buffers

- unsigned `first_free_br ()` const
Returns 1 as first free buffer.
- void `setup_wait (l4_utcb_t *utcb, L4::lpc_svr::Reply_mode)`
Setup wait function for the server loop (Server<>).

16.302.1 Detailed Description

```
template<typename LOOP_HOOKS = L4::lpc_svr::Default_loop_hooks>
class L4Re::Util::Registry_server< LOOP_HOOKS >
```

A server loop object which has a [Object_registry](#) included.

Examples

[examples/clntsrv/src/server.cc](#), [examples/libs/l4re/c++/shared_ds/ds_srv.cc](#), and [examples/libs/l4re/streammap/server.cc](#).

Definition at line 296 of file [object_registry](#).

16.302.2 Constructor & Destructor Documentation

16.302.2.1 Registry_server() [1/3]

```
template<typename LOOP_HOOKS = L4::lpc_svr::Default_loop_hooks>
L4Re::Util::Registry_server< LOOP_HOOKS >::Registry_server ( ) [inline]
```

Create a new server loop object for the main thread of the task.

Precondition

Must be called from the main thread or behaviour is undefined.

Definition at line 308 of file [object_registry](#).

16.302.2.2 Registry_server() [2/3]

```
template<typename LOOP_HOOKS = L4::lpc_svr::Default_loop_hooks>
L4Re::Util::Registry_server< LOOP_HOOKS >::Registry_server (
    l4_utcb_t * ,
    L4::Cap< L4::Thread > server,
    L4::Cap< L4::Factory > factory ) [inline]
```

Create a new server loop object for an arbitrary thread and factory.

Parameters

| | |
|----------------|--|
| <i>server</i> | Capability to thread running the server loop. |
| <i>factory</i> | Capability to factory object used to create new IPC gates. |

Deprecated Note that this variant of the constructor is deprecated, please do not supply the UTCB pointer, it's not used.

Definition at line 320 of file [object_registry](#).

16.302.2.3 Registry_server() [3/3]

```
template<typename LOOP_HOOKS = L4::Ipc_svr::Default_loop_hooks>
L4Re::Util::Registry_server< LOOP_HOOKS >::Registry_server (
    L4::Cap< L4::Thread > server,
    L4::Cap< L4::Factory > factory ) [inline]
```

Create a new server loop object for an arbitrary thread and factory.

Parameters

| | |
|----------------|--|
| <i>server</i> | Capability to thread running the server loop. |
| <i>factory</i> | Capability to factory object used to create new IPC gates. |

Definition at line 331 of file [object_registry](#).

16.302.3 Member Function Documentation

16.302.3.1 loop()

16.305 L4Re::Util::Vcon_svr< SVR > Class Template Reference

[Console](#) server template class.

```
#include <vcon_svr>
```

Collaboration diagram for L4Re::Util::Vcon_svr< SVR >:

16.305.1 Detailed Description

```
template<typename SVR>
class L4Re::Util::Vcon_svr< SVR >
```

[Console](#) server template class.

This template uses `vcon_write()` and `vcon_read()` to get and deliver data from the implementor.

`vcon_read()` needs to update the status argument with the `L4_vcon_read_stat` flags, especially the `L4_VCON_READ_STAT_DONE` flag to indicate that there's nothing more to read for the other end.

`vcon_write()` gets the live data from the UTCB. Make sure to copy out the data before using the UTCB again.

The size parameter of both functions is given in bytes.

Definition at line 36 of file [vcon_svr](#).

The documentation for this class was generated from the following file:

16.306 L4Re::Util::Video::Goos_svr Class Reference

Goos server class.

```
#include <goos_svr>
```

Collaboration diagram for L4Re::Util::Video::Goos_svr:

Public Member Functions

- [L4::Cap](#)< [L4Re::Dataspace](#) > [get_fb](#) () const
Return framebuffer memory dataspace.
- [L4Re::Video::Goos::Info](#) const * [screen_info](#) () const
Goos information structure.
- [L4Re::Video::View::Info](#) const * [view_info](#) () const
View information structure.
- virtual int [refresh](#) (int x, int y, int w, int h)
Refresh area of the framebuffer.
- void [init_infos](#) ()
Initialize the view information structure of this object.
- virtual ~[Goos_svr](#) ()
Destructor.

Protected Attributes

- [L4::Cap](#)< [L4Re::Dataspace](#) > [_fb_ds](#)
Goos memory dataspace.
- [L4Re::Video::Goos::Info](#) [_screen_info](#)
Goos information.
- [L4Re::Video::View::Info](#) [_view_info](#)
View information.

16.306.1 Detailed Description

Goos server class.

Definition at line 25 of file [goos_svr](#).

16.306.2 Member Function Documentation

16.306.2.1 [get_fb\(\)](#)

```
L4::Cap< L4Re::Dataspace > L4Re::Util::Video::Goos\_svr::get\_fb ( ) const [inline]
```

Return framebuffer memory dataspace.

Returns

Goos memory dataspace

Definition at line 42 of file [goos_svr](#).

References [_fb_ds](#).

16.306.2.2 init_infos()

```
void L4Re::Util::Video::Goos_svr::init_infos ( ) [inline]
```

Initialize the view information structure of this object.

This function initializes the view info structure of this goos object based on the information in the goos information, i.e. the width, height and pixel_info of the goos information has to contain valid values before calling init_info().

Definition at line 78 of file [goos_svr](#).

References [_screen_info](#), [_view_info](#), [L4Re::Video::View::Info::buffer_index](#), [L4Re::Video::View::Info::flags](#), [L4Re::Video::View::Info::height](#), [L4Re::Video::Goos::Info::height](#), [L4Re::Video::View::Info::pixel_info](#), [L4Re::Video::Goos::Info::pixel_info](#), [L4Re::Video::View::Info::view_index](#), [L4Re::Video::View::Info::width](#), [L4Re::Video::Goos::Info::width](#), [L4Re::Video::View::Info::xpos](#), and [L4Re::Video::View::Info::ypos](#).

16.306.2.3 refresh()

```
virtual int L4Re::Util::Video::Goos_svr::refresh (
    int x,
    int y,
    int w,
    int h ) [inline], [virtual]
```

Refresh area of the framebuffer.

Parameters

| | |
|----------|--------------------------|
| <i>x</i> | X coordinate (pixels) |
| <i>y</i> | Y coordinate (pixels) |
| <i>w</i> | Width of area in pixels |
| <i>h</i> | Height of area in pixels |

Returns

0 on success, negative error code otherwise

Definition at line 66 of file [goos_svr](#).

References [L4_ENOSYS](#).

16.306.2.4 screen_info()

```
L4Re::Video::Goos::Info const * L4Re::Util::Video::Goos_svr::screen_info ( ) const [inline]
```

Goos information structure.

Returns

Return goos information structure.

Definition at line 48 of file [goos_svr](#).

References [_screen_info](#).

16.306.2.5 view_info()

```
L4Re::Video::View::Info const * L4Re::Util::Video::Goos_svr::view_info ( ) const [inline]
```

View information structure.

Returns

Return view information structure.

Definition at line 54 of file [goos_svr](#).

References [_view_info](#).

The documentation for this class was generated from the following file:

16.307 L4Re::Vfs::Be_file Class Reference

Boiler plate class for implementing an open file for [L4Re::Vfs](#).

```
#include <backend>
```

Inheritance diagram for L4Re::Vfs::Be_file:

Collaboration diagram for L4Re::Vfs::Be_file:

Public Member Functions

- `int unlock_all_locks ()` noexcept override
Unlock all locks on the file.
- `L4::Cap< L4Re::Dataspace > data_space ()` noexcept override
Get an [L4Re::Dataspace](#) object for the file.
- `ssize_t readv (const struct iovec *, int)` noexcept override
Default backend for POSIX read and readv functions.
- `ssize_t writev (const struct iovec *, int)` noexcept override
Default backend for POSIX write and writev functions.
- `ssize_t pwritev (const struct iovec *, int, off64_t)` noexcept override
Default backend for POSIX pwrite and pwritev functions.
- `ssize_t preadv (const struct iovec *, int, off64_t)` noexcept override
Default backend for POSIX pread and preadv functions.
- `off64_t lseek64 (off64_t, int)` noexcept override
Default backend for POSIX seek and lseek functions.
- `int ftruncate64 (off64_t)` noexcept override
Default backend for the POSIX truncate, ftruncate and similar functions.
- `int fsync ()` const noexcept override
Default backend for POSIX fsync.
- `int fdatasync ()` const noexcept override
Default backend for POSIX fdatasync.

- int **ioctl** (unsigned long, va_list) noexcept override
Default backend for POSIX ioctl.
- int **fstat64** (struct stat64 *) const noexcept override
Get status information for the file.
- int **fchmod** (mode_t) noexcept override
Default backend for POSIX chmod and fchmod.
- int **get_status_flags** () const noexcept override
Default backend for POSIX fcntl subfunctions.
- int **set_status_flags** (long) noexcept override
Default backend for POSIX fcntl subfunctions.
- int **get_lock** (struct flock64 *) noexcept override
Default backend for POSIX fcntl subfunctions.
- int **set_lock** (struct flock64 *, bool) noexcept override
Default backend for POSIX fcntl subfunctions.
- int **faccessat** (const char *, int, int) noexcept override
Default backend for POSIX access and faccessat functions.
- int **fchmodat** (const char *, mode_t, int) noexcept override
Default backend for POSIX fchmodat function.
- int **utime** (const struct utimbuf *) noexcept override
Default backend for POSIX utime.
- int **utimes** (const struct timeval[2]) noexcept override
Default backend for POSIX utimes.
- int **utimensat** (const char *, const struct timespec[2], int) noexcept override
Default backend for POSIX utimensat.
- int **mkdir** (const char *, mode_t) noexcept override
Default backend for POSIX mkdir and mkdirat.
- int **unlink** (const char *) noexcept override
Default backend for POSIX unlink, unlinkat.
- int **rename** (const char *, const char *) noexcept override
Default backend for POSIX rename, renameat.
- int **link** (const char *, const char *) noexcept override
Default backend for POSIX link, linkat.
- int **symlink** (const char *, const char *) noexcept override
Default backend for POSIX symlink, symlinkat.
- int **rmdir** (const char *) noexcept override
Default backend for POSIX rmdir, rmdirat.
- ssize_t **readlink** (char *, size_t) override
Default backend for POSIX readlink, readlinkat.
- bool **check_ready** ([Ready_type](#)) noexcept override
Default implementation of a readiness check.

Additional Inherited Members

Public Types inherited from [L4Re::Vfs::Generic_file](#)

- enum [Ready_type](#) : unsigned
Type of I/O operation/condition a file can indicate readiness.

16.307.1 Detailed Description

Boiler plate class for implementing an open file for [L4Re::Vfs](#).

This class may be used as a base class for everything that a POSIX file descriptor may point to. This are things such as regular files, directories, special device files, streams, pipes, and so on.

Examples

[tmpfs/lib/src/fs.cc](#).

Definition at line 28 of file [backend](#).

16.307.2 Member Function Documentation

16.307.2.1 `check_ready()`

```
bool L4Re::Vfs::Be_file::check_ready (
    Ready_type ) [inline], [override], [virtual], [noexcept]
```

Default implementation of a readiness check.

By default, we assume a file is not ready for an I/O operation/condition since the proper semantics of that relies on the backend.

Returns

Always false.

Implements [L4Re::Vfs::Generic_file](#).

Definition at line 215 of file [backend](#).

16.307.2.2 `data_space()`

```
L4::Cap< L4Re::Dataspace > L4Re::Vfs::Be_file::data_space ( ) [inline], [override], [virtual],
[noexcept]
```

Get an [L4Re::Dataspace](#) object for the file.

This is used as a backend for POSIX mmap and mmap2 functions.

Note

mmap is not possible if the function returns an invalid capability.

Returns

A capability to an [L4Re::Dataspace](#) that represents the file contents in an [L4Re](#) way.

Implements [L4Re::Vfs::Regular_file](#).

Definition at line 45 of file [backend](#).

16.307.2.3 `fstat64()`

```
int L4Re::Vfs::Be_file::fstat64 (
    struct stat64 * buf ) const [inline], [override], [virtual], [noexcept]
```

Get status information for the file.

This is the backend for POSIX fstat, stat, fstat64 and friends.

Parameters

| | | |
|-----|-----|--|
| out | buf | This buffer is filled with the status information. |
|-----|-----|--|

Returns

0 on success, or <0 on error.

Implements [L4Re::Vfs::Generic_file](#).

Definition at line 84 of file [backend](#).

16.307.2.4 unlock_all_locks()

```
int L4Re::Vfs::Be_file::unlock_all_locks ( ) [inline], [override], [virtual], [noexcept]
```

Unlock all locks on the file.

Note

All locks means all locks independent of which file the locks were taken by.

This method is called by the POSIX close implementation to get the POSIX semantics of releasing all locks taken by this application on a close for any fd referencing the real file.

Returns

0 on success, or <0 on error.

Implements [L4Re::Vfs::Generic_file](#).

Definition at line 41 of file [backend](#).

The documentation for this class was generated from the following file:

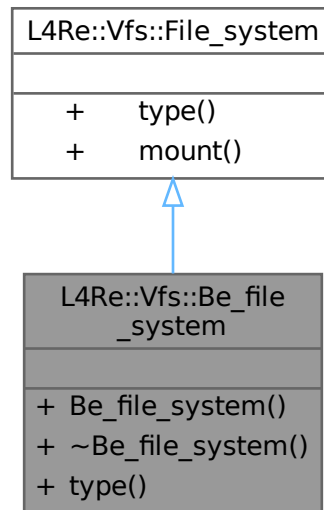

- [l4/l4re_vfs/backend](#)

16.308 L4Re::Vfs::Be_file_system Class Reference

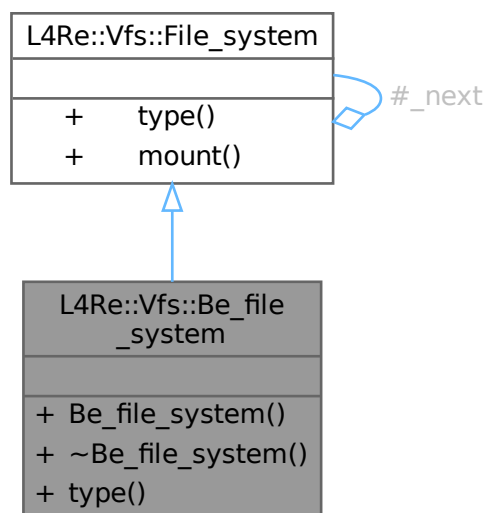

Boilerplate class for implementing a [L4Re::Vfs::File_system](#).

```
#include <backend>
```

Inheritance diagram for L4Re::Vfs::Be_file_system:

Collaboration diagram for L4Re::Vfs::Be_file_system:

Public Member Functions

- [Be_file_system](#) (char const *fstype) noexcept
Create a file-system object for the given fstype.
- [~Be_file_system](#) () noexcept
Destroy a file-system object.
- char const * [type](#) () const noexcept override
Return the file-system type.

Public Member Functions inherited from [L4Re::Vfs::File_system](#)

- virtual int [mount](#) (char const *source, unsigned long mountflags, void const *data, [cxx::Ref_ptr](#)< [File](#) > *dir) noexcept=0
Create a directory object dir representing source mounted with this file system.

16.308.1 Detailed Description

Boilerplate class for implementing a [L4Re::Vfs::File_system](#).

This class already takes care of registering and unregistering the file system in the global registry and implements the [type\(\)](#) method.

Examples

[tmpfs/lib/src/fs.cc](#).

Definition at line 308 of file [backend](#).

16.308.2 Constructor & Destructor Documentation

16.308.2.1 [Be_file_system](#)()

```
L4Re::Vfs::Be_file_system::Be_file_system (
    char const * fstype ) [inline], [explicit], [noexcept]
```

Create a file-system object for the given *fstype*.

Parameters

| | |
|---------------|--|
| <i>fstype</i> | The type that type() shall return. |
|---------------|--|

This constructor takes care of registering the file system in the registry of L4Re::Vfs::vfs_ops.

Definition at line 322 of file [backend](#).

16.308.2.2 [~Be_file_system](#)()

```
L4Re::Vfs::Be_file_system::~~Be_file_system ( ) [inline], [noexcept]
```

Destroy a file-system object.

This destructor takes care of removing this file system from the registry of `L4Re::Vfs::vfs_ops`.

Definition at line 334 of file [backend](#).

16.308.3 Member Function Documentation

16.308.3.1 `type()`

```
char const * L4Re::Vfs::Be_file_system::type ( ) const [inline], [override], [virtual], [noexcept]
```

Return the file-system type.

Returns the file-system type given as *fstype* in the constructor.

Implements [L4Re::Vfs::File_system](#).

Definition at line 344 of file [backend](#).

The documentation for this class was generated from the following file:

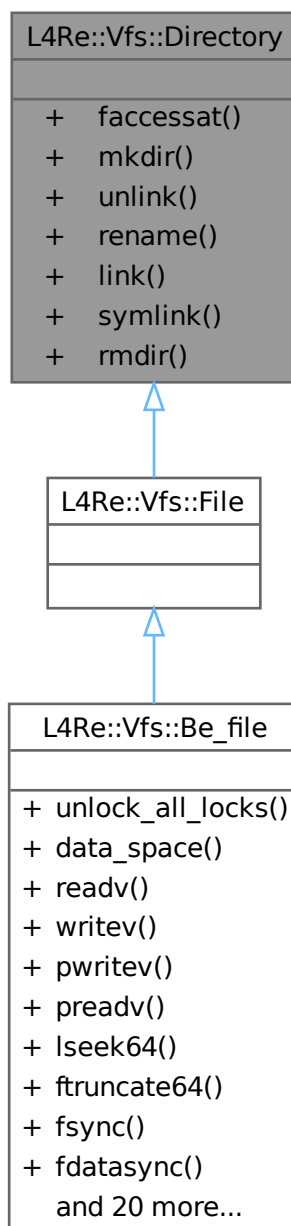

- `l4/l4re_vfs/backend`

16.309 L4Re::Vfs::Directory Class Reference

Interface for a POSIX file that is a directory.

```
#include <vfs.h>
```

Inheritance diagram for L4Re::Vfs::Directory:

Collaboration diagram for L4Re::Vfs::Directory:

| L4Re::Vfs::Directory | |
|----------------------|-------------|
| | |
| + | faccessat() |
| + | mkdir() |
| + | unlink() |
| + | rename() |
| + | link() |
| + | symlink() |
| + | rmdir() |

Public Member Functions

- virtual int [faccessat](#) (const char *path, int mode, int flags) noexcept=0
Check access permissions on the given file.
- virtual int [mkdir](#) (const char *path, mode_t mode) noexcept=0
Create a new subdirectory.
- virtual int [unlink](#) (const char *path) noexcept=0
Unlink the given file from that directory.
- virtual int [rename](#) (const char *src_path, const char *dst_path) noexcept=0
Rename the given file.
- virtual int [link](#) (const char *src_path, const char *dst_path) noexcept=0
Create a hard link (second name) for the given file.
- virtual int [symlink](#) (const char *src_path, const char *dst_path) noexcept=0
Create a symbolic link for the given file.
- virtual int [rmdir](#) (const char *path) noexcept=0
Delete an empty directory.

16.309.1 Detailed Description

Interface for a POSIX file that is a directory.

This interface provides functionality for directory files in the [L4Re::Vfs](#). However, real objects always use the combined [L4Re::Vfs::File](#) interface.

Definition at line [159](#) of file [vfs.h](#).

16.309.2 Member Function Documentation

16.309.2.1 faccessat()

```
virtual int L4Re::Vfs::Directory::faccessat (
    const char * path,
    int mode,
    int flags ) [pure virtual], [noexcept]
```

Check access permissions on the given file.

Backend function for POSIX access and faccessat functions.

Parameters

| | |
|--------------|--|
| <i>path</i> | The path relative to this directory. Note: <i>path</i> is relative to this directory and may contain subdirectories. |
| <i>mode</i> | The access mode to check. |
| <i>flags</i> | The flags as in POSIX faccessat (AT_EACCESS, AT_SYMLINK_NOFOLLOW). |

Returns

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

16.309.2.2 link()

```
virtual int L4Re::Vfs::Directory::link (
    const char * src_path,
    const char * dst_path ) [pure virtual], [noexcept]
```

Create a hard link (second name) for the given file.

Backend for the POSIX link and linkat functions.

Parameters

| | |
|-----------------|---|
| <i>src_path</i> | The old name of the file. Note: <i>src_path</i> is relative to this directory and may contain subdirectories. |
| <i>dst_path</i> | The new (second) name for the file. Note: <i>dst_path</i> is relative to this directory and may contain subdirectories. |

Returns

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

16.309.2.3 mkdir()

```
virtual int L4Re::Vfs::Directory::mkdir (
    const char * path,
    mode_t mode ) [pure virtual], [noexcept]
```

Create a new subdirectory.

Backend for POSIX mkdir and mkdirat function calls.

Parameters

| | |
|-------------|---|
| <i>path</i> | The name of the subdirectory to create. Note: <i>path</i> is relative to this directory and may contain subdirectories. |
| <i>mode</i> | The file mode to use for the new directory. |

Returns

0 on success, or <0 on error. -ENOTDIR if this or some component in path is not a directory.

Implemented in [L4Re::Vfs::Be_file](#).

16.309.2.4 rename()

```
virtual int L4Re::Vfs::Directory::rename (
    const char * src_path,
    const char * dst_path ) [pure virtual], [noexcept]
```

Rename the given file.

Backend for the POSIX rename, renameat functions.

Parameters

| | |
|-----------------|---|
| <i>src_path</i> | The old name of the file to rename. Note: <i>src_path</i> is relative to this directory and may contain subdirectories. |
| <i>dst_path</i> | The new name for the file. Note: <i>dst_path</i> is relative to this directory and may contain subdirectories. |

Returns

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

16.309.2.5 rmdir()

```
virtual int L4Re::Vfs::Directory::rmdir (
    const char * path ) [pure virtual], [noexcept]
```

Delete an empty directory.

Backend for POSIX rmdir, rmdirat functions.

Parameters

| | |
|-------------|--|
| <i>path</i> | The name of the directory to remove. Note: <i>path</i> is relative to this directory and may contain subdirectories. |
|-------------|--|

Returns

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

16.309.2.6 symlink()

```
virtual int L4Re::Vfs::Directory::symlink (
    const char * src_path,
    const char * dst_path ) [pure virtual], [noexcept]
```

Create a symbolic link for the given file.

Backend for the POSIX symlink and symlinkat functions.

Parameters

| | |
|-----------------|---|
| <i>src_path</i> | The old name of the file. Note: <i>src_path</i> shall be an absolute path. |
| <i>dst_path</i> | The name for symlink. Note: <i>dst_path</i> is relative to this directory and may contain subdirectories. |

Returns

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

16.309.2.7 unlink()

```
virtual int L4Re::Vfs::Directory::unlink (
    const char * path ) [pure virtual], [noexcept]
```

Unlink the given file from that directory.

Backend for the POSIX unlink and unlinkat functions.

Parameters

| | |
|-------------|---|
| <i>path</i> | The name of the file to unlink. Note: <i>path</i> is relative to this directory and may contain subdirectories. |
|-------------|---|

Returns

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

The documentation for this class was generated from the following file:

- l4/l4re_vfs/vfs.h

16.310 L4Re::Vfs::File Class Reference

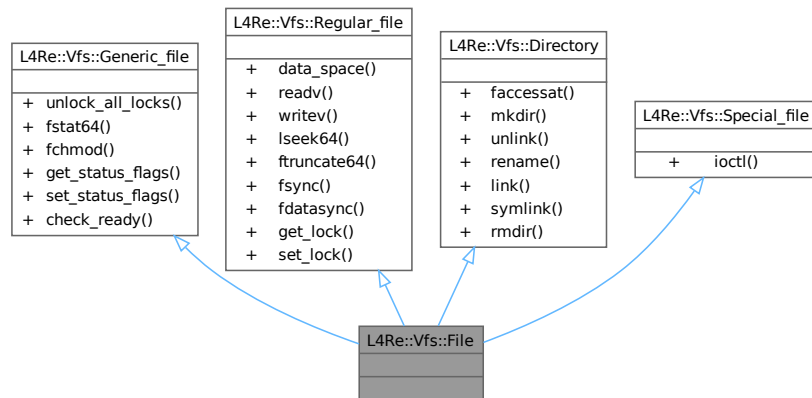

The basic interface for an open POSIX file.

```
#include <vfs.h>
```

Inheritance diagram for L4Re::Vfs::File:

Collaboration diagram for L4Re::Vfs::File:

Additional Inherited Members

Public Types inherited from [L4Re::Vfs::Generic_file](#)

- enum [Ready_type](#) : unsigned
Type of I/O operation/condition a file can indicate readiness.

Public Member Functions inherited from [L4Re::Vfs::Generic_file](#)

- virtual int [unlock_all_locks](#) () noexcept=0
Unlock all locks on the file.
- virtual int [fstat64](#) (struct stat64 *buf) const noexcept=0
Get status information for the file.
- virtual int [fchmod](#) (mode_t) noexcept=0
Change POSIX access rights on the file.
- virtual int [get_status_flags](#) () const noexcept=0
Get file status flags (fcntl F_GETFL).
- virtual int [set_status_flags](#) (long flags) noexcept=0
Set file status flags (fcntl F_SETFL).
- virtual bool [check_ready](#) ([Ready_type](#) rt) noexcept=0
Check whether the file is ready for an I/O operation/condition.

Public Member Functions inherited from [L4Re::Vfs::Regular_file](#)

- virtual [L4::Cap](#)< [L4Re::Dataspace](#) > [data_space](#) () noexcept=0
Get an [L4Re::Dataspace](#) object for the file.
- virtual ssize_t [readv](#) (const struct iovec *, int iovcnt) noexcept=0
Read one or more blocks of data from the file.
- virtual ssize_t [writev](#) (const struct iovec *, int iovcnt) noexcept=0
Write one or more blocks of data to the file.

- virtual `off64_t lseek64 (off64_t, int) noexcept=0`
Change the file pointer.
- virtual `int ftruncate64 (off64_t pos) noexcept=0`
Truncate the file at the given position.
- virtual `int fsync () const noexcept=0`
Sync the data and meta data to persistent storage.
- virtual `int fdatsync () const noexcept=0`
Sync the data to persistent storage.
- virtual `int get_lock (struct flock64 *lock) noexcept=0`
Test if the given lock can be placed in the file.
- virtual `int set_lock (struct flock64 *lock, bool wait) noexcept=0`
Acquire or release the given lock on the file.

Public Member Functions inherited from [L4Re::Vfs::Directory](#)

- virtual `int faccessat (const char *path, int mode, int flags) noexcept=0`
Check access permissions on the given file.
- virtual `int mkdir (const char *path, mode_t mode) noexcept=0`
Create a new subdirectory.
- virtual `int unlink (const char *path) noexcept=0`
Unlink the given file from that directory.
- virtual `int rename (const char *src_path, const char *dst_path) noexcept=0`
Rename the given file.
- virtual `int link (const char *src_path, const char *dst_path) noexcept=0`
Create a hard link (second name) for the given file.
- virtual `int symlink (const char *src_path, const char *dst_path) noexcept=0`
Create a symbolic link for the given file.
- virtual `int rmdir (const char *path) noexcept=0`
Delete an empty directory.

Public Member Functions inherited from [L4Re::Vfs::Special_file](#)

- virtual `int ioctl (unsigned long cmd, va_list args) noexcept=0`
The famous IO control.

16.310.1 Detailed Description

The basic interface for an open POSIX file.

An open POSIX file can be anything that hides behind a POSIX file descriptor. This means that even directories are files. An open file can be anything from a directory to a special device file so see [Generic_file](#), [Regular_file](#), [Directory](#), and [Special_file](#) for more information.

Note

For implementing a backend for the [L4Re::Vfs](#) [L4Re::Vfs::Be_file](#) may be used as a base class.

Definition at line 454 of file [vfs.h](#).

The documentation for this class was generated from the following file:

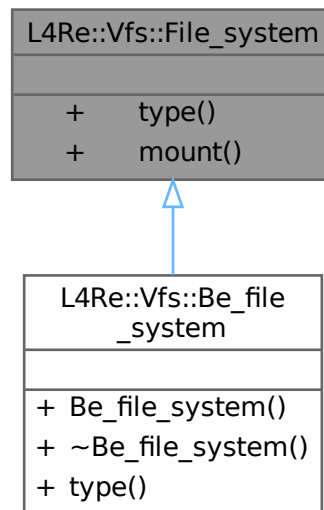

- `l4/l4re_vfs/vfs.h`

16.311 L4Re::Vfs::File_system Class Reference

Basic interface for an [L4Re::Vfs](#) file system.

```
#include <vfs.h>
```

Inheritance diagram for L4Re::Vfs::File_system:

Collaboration diagram for L4Re::Vfs::File_system:

Public Member Functions

- virtual char const * `type ()` const noexcept=0
Returns the type of the file system used in mount as fstype argument.
- virtual int `mount` (char const *source, unsigned long mountflags, void const *data, [cxx::Ref_ptr](#)< [File](#) > *dir) noexcept=0
Create a directory object dir representing source mounted with this file system.

16.311.1 Detailed Description

Basic interface for an [L4Re::Vfs](#) file system.

Note

For implementing a special file system [L4Re::Vfs::Be_file_system](#) may be used as a base class.

The main purpose of this interface is to have a single object for each supported file-system type (e.g., ext2, vfat) that exists in the application and is registered at the [L4Re::Vfs::Fs](#) singleton available via [L4Re::Vfs::vfs_ops](#). Ultimately, the POSIX mount function calls the [File_system::mount](#) method matching the file-system type given in mount.

Definition at line 846 of file [vfs.h](#).

16.311.2 Member Function Documentation

16.311.2.1 mount()

```
virtual int L4Re::Vfs::File_system::mount (
    char const * source,
    unsigned long mountflags,
    void const * data,
    cxx::Ref\_ptr< File > * dir ) [pure virtual], [noexcept]
```

Create a directory object *dir* representing *source* mounted with this file system.

Parameters

| | | |
|-----|-------------------|---|
| | <i>source</i> | The path to the source device to mount. This may also be some URL or anything file-system specific. |
| | <i>mountflags</i> | The mount flags as specified in the POSIX mount call. |
| | <i>data</i> | The data as specified in the POSIX mount call. The contents are file-system specific. |
| out | <i>dir</i> | A new directory object representing the file-system root directory. |

Returns

0 on success, and <0 on error (e.g. -EINVAL).

16.311.2.2 type()

```
virtual char const * L4Re::Vfs::File_system::type ( ) const [pure virtual], [noexcept]
```

Returns the type of the file system used in mount as fstype argument.

Note

This method is already provided by [Be_file_system](#).

Implemented in [L4Re::Vfs::Be_file_system](#).

The documentation for this class was generated from the following file:

- [l4/l4re_vfs/vfs.h](#)

16.312 L4Re::Vfs::Fs Class Reference

POSIX File-system related functionality.

```
#include <vfs.h>
```

Inheritance diagram for L4Re::Vfs::Fs:

Collaboration diagram for L4Re::Vfs::Fs:

Public Member Functions

- virtual [cxx::Ref_ptr< File >](#) **get_file** (int fd) noexcept=0
Get the [L4Re::Vfs::File](#) for the file descriptor fd.
- virtual [cxx::Ref_ptr< File >](#) **get_root** () noexcept=0
Get the directory object for the application's root directory.
- virtual [cxx::Ref_ptr< File >](#) **get_cwd** () noexcept
Get the directory object for the application's current working directory.
- virtual void **set_cwd** ([cxx::Ref_ptr< File >](#) const &) noexcept
Set the current working directory for the application.
- virtual int **alloc_fd** ([cxx::Ref_ptr< File >](#) const &f=[cxx::Ref_ptr<>::Nil](#)) noexcept=0
Allocate the next free file descriptor.
- virtual [cxx::Pair< cxx::Ref_ptr< File >, int >](#) **set_fd** (int fd, [cxx::Ref_ptr< File >](#) const &f=[cxx::Ref_ptr<>::Nil](#)) noexcept=0
Set the file object referenced by the file descriptor fd.
- virtual [cxx::Ref_ptr< File >](#) **free_fd** (int fd) noexcept=0
Free the file descriptor fd.
- virtual int **mount** (char const *path, [cxx::Ref_ptr< File >](#) const &dir) noexcept=0
Mount a given file object at the given global path in the VFS.
- int **mount** (char const *source, char const *target, char const *fstype, unsigned long mountflags, void const *data) noexcept
Backend for the POSIX mount call.

16.312.1 Detailed Description

POSIX File-system related functionality.

Note

This class usually exists as a singleton and as a superclass of [L4Re::Vfs::Ops](#) (

See also

[L4Re::Vfs::vfs_ops](#)).

Definition at line 935 of file [vfs.h](#).

16.312.2 Member Function Documentation

16.312.2.1 `alloc_fd()`

```
virtual int L4Re::Vfs::Fs::alloc_fd (
    cxx::Ref_ptr< File > const & f = cxx::Ref_ptr<>::Nil ) [pure virtual], [noexcept]
```

Allocate the next free file descriptor.

Parameters

| | |
|----------|---|
| <i>f</i> | The file to assign to that file descriptor. |
|----------|---|

Returns

The allocated file descriptor, or -EMFILE on error.

16.312.2.2 `free_fd()`

```
virtual cxx::Ref_ptr< File > L4Re::Vfs::Fs::free_fd (
    int fd ) [pure virtual], [noexcept]
```

Free the file descriptor *fd*.

Parameters

| | |
|-----------|------------------------------|
| <i>fd</i> | The file descriptor to free. |
|-----------|------------------------------|

Returns

A pointer to the file object that was assigned to the *fd*.

16.312.2.3 `get_file()`

```
virtual cxx::Ref_ptr< File > L4Re::Vfs::Fs::get_file (
    int fd ) [pure virtual], [noexcept]
```

Get the [L4Re::Vfs::File](#) for the file descriptor *fd*.

Parameters

| | |
|-----------|-----------------------------------|
| <i>fd</i> | The POSIX file descriptor number. |
|-----------|-----------------------------------|

Returns

A pointer to the [File](#) object, or 0 if *fd* is not open.

16.312.2.4 mount()

```
virtual int L4Re::Vfs::Fs::mount (
    char const * path,
    cxx::Ref_ptr< File > const & dir ) [pure virtual], [noexcept]
```

Mount a given file object at the given global path in the VFS.

Parameters

| | |
|-------------|---|
| <i>path</i> | The global path to mount <i>dir</i> at. |
| <i>dir</i> | A pointer to the file/directory object that shall be mounted at <i>path</i> . |

Returns

0 on success, or <0 on error.

16.312.2.5 set_fd()

```
virtual cxx::Pair< cxx::Ref_ptr< File >, int > L4Re::Vfs::Fs::set_fd (
    int fd,
    cxx::Ref_ptr< File > const & f = cxx::Ref_ptr<>::Nil ) [pure virtual], [noexcept]
```

Set the file object referenced by the file descriptor *fd*.

Parameters

| | |
|-----------|--|
| <i>fd</i> | The file descriptor to set to <i>f</i> . |
| <i>f</i> | The file object to assign. |

Returns

A pair of a pointer to the file object that was previously assigned to *fd* (*first*) and a return value (*second*). *second* contains `-#EBADF` if the passed file descriptor is outside the valid range. *first* contains a Nil pointer in that case. On success, *second* contains 0.

The documentation for this class was generated from the following files:

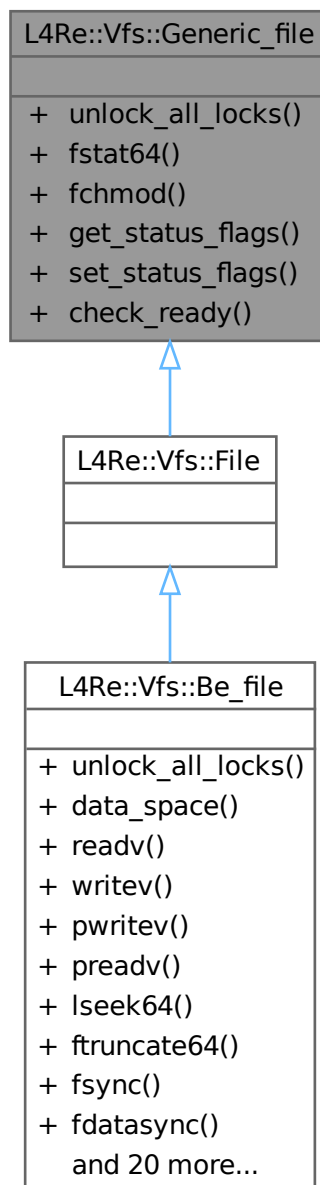

- l4/l4re_vfs/vfs.h
- l4/l4re_vfs/impl/vfs_impl.h

16.313 L4Re::Vfs::Generic_file Class Reference

The common interface for an open POSIX file.

```
#include <vfs.h>
```

Inheritance diagram for L4Re::Vfs::Generic_file:

Collaboration diagram for L4Re::Vfs::Generic_file:

| L4Re::Vfs::Generic_file |
|--|
| <ul style="list-style-type: none"> + unlock_all_locks() + fstat64() + fchmod() + get_status_flags() + set_status_flags() + check_ready() |

Public Types

- enum [Ready_type](#) : unsigned
Type of I/O operation/condition a file can indicate readiness.

Public Member Functions

- virtual int [unlock_all_locks](#) () noexcept=0
Unlock all locks on the file.
- virtual int [fstat64](#) (struct stat64 *buf) const noexcept=0
Get status information for the file.
- virtual int [fchmod](#) (mode_t) noexcept=0
Change POSIX access rights on the file.
- virtual int [get_status_flags](#) () const noexcept=0
Get file status flags (fcntl F_GETFL).
- virtual int [set_status_flags](#) (long flags) noexcept=0
Set file status flags (fcntl F_SETFL).
- virtual bool [check_ready](#) ([Ready_type](#) rt) noexcept=0
Check whether the file is ready for an I/O operation/condition.

16.313.1 Detailed Description

The common interface for an open POSIX file.

This interface is common to all kinds of open files, independent of the file type (e.g., directory, regular file etc.). However, in the [L4Re::Vfs](#) the interface [File](#) is used for every real object.

See also

[L4Re::Vfs::File](#) for more information.

Definition at line 51 of file [vfs.h](#).

16.313.2 Member Enumeration Documentation

16.313.2.1 Ready_type

```
enum L4Re::Vfs::Generic_file::Ready_type : unsigned
```

Type of I/O operation/condition a file can indicate readiness.

As defined by select() and similar functions.

Definition at line 59 of file [vfs.h](#).

16.313.3 Member Function Documentation

16.313.3.1 check_ready()

```
virtual bool L4Re::Vfs::Generic_file::check_ready (
    Ready_type rt ) [pure virtual], [noexcept]
```

Check whether the file is ready for an I/O operation/condition.

This method is used by the implementation of select() and similar functions.

Parameters

| | |
|-----------|---|
| <i>rt</i> | Type of the I/O operation/condition to be ready, as defined by the select() and similar functions (Read, Write, Exception). |
|-----------|---|

Return values

| | |
|--------------|--|
| <i>true</i> | The file is ready for the given type of I/O operation/condition. |
| <i>false</i> | The file is not ready for the given type of I/O operation/condition. |

Implemented in [L4Re::Vfs::Be_file](#).

16.313.3.2 fchmod()

```
virtual int L4Re::Vfs::Generic_file::fchmod (
    mode_t ) [pure virtual], [noexcept]
```

Change POSIX access rights on the file.

Backend for POSIX chmod and fchmod.

Implemented in [L4Re::Vfs::Be_file](#).

16.313.3.3 fstat64()

```
virtual int L4Re::Vfs::Generic_file::fstat64 (  
    struct stat64 * buf ) const    [pure virtual], [noexcept]
```

Get status information for the file.

This is the backend for POSIX fstat, stat, fstat64 and friends.

Parameters

| | | |
|------------|------------|--|
| <i>out</i> | <i>buf</i> | This buffer is filled with the status information. |
|------------|------------|--|

Returns

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

16.313.3.4 get_status_flags()

```
virtual int L4Re::Vfs::Generic_file::get_status_flags ( ) const [pure virtual], [noexcept]
```

Get file status flags (fcntl F_GETFL).

This function is used by the fcntl implementation for the F_GETFL command.

Returns

flags such as O_RDONLY, O_WRONLY, O_RDWR, O_DIRECT, O_ASYNC, O_NOATIME, O_NONBLOCK, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

16.313.3.5 set_status_flags()

```
virtual int L4Re::Vfs::Generic_file::set_status_flags (
    long flags ) [pure virtual], [noexcept]
```

Set file status flags (fcntl F_SETFL).

This function is used by the fcntl implementation for the F_SETFL command.

Parameters

| | |
|--------------|---|
| <i>flags</i> | The file status flags to set. This must be a combination of O_RDONLY, O_WRONLY, O_RDWR, O_APPEND, O_ASYNC, O_DIRECT, O_NOATIME, O_NONBLOCK. |
|--------------|---|

Note

Creation flags such as O_CREAT, O_EXCL, O_NOCTTY, O_TRUNC are ignored.

Returns

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

16.313.3.6 unlock_all_locks()

```
virtual int L4Re::Vfs::Generic_file::unlock_all_locks ( ) [pure virtual], [noexcept]
```

Unlock all locks on the file.

Note

All locks means all locks independent of which file the locks were taken by.

This method is called by the POSIX close implementation to get the POSIX semantics of releasing all locks taken by this application on a close for any fd referencing the real file.

Returns

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

The documentation for this class was generated from the following file:

- l4/l4re_vfs/vfs.h

16.314 L4Re::Vfs::Mman Class Reference

Interface for POSIX memory management.

```
#include <vfs.h>
```

Inheritance diagram for L4Re::Vfs::Mman:

Collaboration diagram for L4Re::Vfs::Mman:

| L4Re::Vfs::Mman |
|---|
| <ul style="list-style-type: none"> + mmap2() + munmap() + mremap() + mprotect() + msync() + madvise() |

Public Member Functions

- virtual int **mmap2** (void *start, size_t len, int prot, int flags, int fd, off_t offset, void **ptr) noexcept=0
Backend for the mmap2 system call.
- virtual int **munmap** (void *start, size_t len) noexcept=0
Backend for the munmap system call.
- virtual int **mremap** (void *old, size_t old_sz, size_t new_sz, int flags, void **new_addr) noexcept=0
Backend for the mremap system call.
- virtual int **mprotect** (const void *a, size_t sz, int prot) noexcept=0
Backend for the mprotect system call.
- virtual int **msync** (void *addr, size_t len, int flags) noexcept=0
Backend for the msync system call.
- virtual int **madvise** (void *addr, size_t len, int advice) noexcept=0
Backend for the madvise system call.

16.314.1 Detailed Description

Interface for POSIX memory management.

Note

This interface usually exists as a singleton and as a superclass of [L4Re::Vfs::Ops](#).

An implementation for this interface is in [l4/l4re_vfs/impl/vfs_impl.h](#) and used by the l4re_vfs library or by the VFS implementation in ldso.

Definition at line 762 of file [vfs.h](#).

The documentation for this class was generated from the following file:

- l4/l4re_vfs/vfs.h

16.315 L4Re::Vfs::Ops Class Reference

Interface for the POSIX backends of an application.

```
#include <vfs.h>
```

Inheritance diagram for L4Re::Vfs::Ops:

Collaboration diagram for L4Re::Vfs::Ops:

Additional Inherited Members

Public Member Functions inherited from L4Re::Vfs::Mman

- virtual int **mmap2** (void *start, size_t len, int prot, int flags, int fd, off_t offset, void **ptr) noexcept=0
Backend for the mmap2 system call.
- virtual int **munmap** (void *start, size_t len) noexcept=0
Backend for the munmap system call.
- virtual int **mremap** (void *old, size_t old_sz, size_t new_sz, int flags, void **new_addr) noexcept=0
Backend for the mremap system call.
- virtual int **mprotect** (const void *a, size_t sz, int prot) noexcept=0
Backend for the mprotect system call.
- virtual int **msync** (void *addr, size_t len, int flags) noexcept=0
Backend for the msync system call.
- virtual int **madvise** (void *addr, size_t len, int advice) noexcept=0
Backend for the madvice system call.

Public Member Functions inherited from L4Re::Vfs::Fs

- virtual [cxx::Ref_ptr< File >](#) **get_file** (int fd) noexcept=0
Get the [L4Re::Vfs::File](#) for the file descriptor fd.

- virtual `cxx::Ref_ptr< File > get_root ()` noexcept=0
Get the directory object for the application's root directory.
- virtual `cxx::Ref_ptr< File > get_cwd ()` noexcept
Get the directory object for the application's current working directory.
- virtual void `set_cwd (cxx::Ref_ptr< File > const &)` noexcept
Set the current working directory for the application.
- virtual int `alloc_fd (cxx::Ref_ptr< File > const &f=cxx::Ref_ptr<>::Nil)` noexcept=0
Allocate the next free file descriptor.
- virtual `cxx::Pair< cxx::Ref_ptr< File >, int > set_fd (int fd, cxx::Ref_ptr< File > const &f=cxx::Ref_ptr<>::Nil)` noexcept=0
Set the file object referenced by the file descriptor fd.
- virtual `cxx::Ref_ptr< File > free_fd (int fd)` noexcept=0
Free the file descriptor fd.
- virtual int `mount (char const *path, cxx::Ref_ptr< File > const &dir)` noexcept=0
Mount a given file object at the given global path in the VFS.
- int `mount (char const *source, char const *target, char const *fstype, unsigned long mountflags, void const *data)` noexcept
Backend for the POSIX mount call.

16.315.1 Detailed Description

Interface for the POSIX backends of an application.

Note

There usually exists a single instance of this interface available via `L4Re::Vfs::vfs_ops` that is used for all kinds of C-Library functions.

Definition at line 1098 of file `vfs.h`.

The documentation for this class was generated from the following file:

- `l4/l4re_vfs/vfs.h`

16.316 L4Re::Vfs::Regular_file Class Reference

Interface for a POSIX file that provides regular file semantics.

```
#include <vfs.h>
```

Inheritance diagram for L4Re::Vfs::Regular_file:

Collaboration diagram for `L4Re::Vfs::Regular_file`:

| L4Re::Vfs::Regular_file | |
|-------------------------|----------------------------|
| | |
| + | <code>data_space()</code> |

| + | <code>ftruncate64()</code> |
| + | <code>fsync()</code> |
| + | <code>fdatasync()</code> |
| + | <code>get_lock()</code> |
| + | <code>set_lock()</code> |

Public Member Functions

- virtual `L4::Cap< L4Re::Dataspace > data_space ()` noexcept=0
Get an `L4Re::Dataspace` object for the file.
- virtual `ssize_t readv (const struct iovec *, int iovcnt)` noexcept=0
Read one or more blocks of data from the file.
- virtual `ssize_t writew (const struct iovec *, int iovcnt)` noexcept=0
Write one or more blocks of data to the file.
- virtual `off64_t lseek64 (off64_t, int)` noexcept=0
Change the file pointer.
- virtual `int ftruncate64 (off64_t pos)` noexcept=0
Truncate the file at the given position.
- virtual `int fsync ()` const noexcept=0
Sync the data and meta data to persistent storage.
- virtual `int fdatasync ()` const noexcept=0
Sync the data to persistent storage.
- virtual `int get_lock (struct flock64 *lock)` noexcept=0
Test if the given lock can be placed in the file.
- virtual `int set_lock (struct flock64 *lock, bool wait)` noexcept=0
Acquire or release the given lock on the file.

16.316.1 Detailed Description

Interface for a POSIX file that provides regular file semantics.

Real objects always use the combined `L4Re::Vfs::File` interface.

Definition at line 286 of file `vfs.h`.

16.316.2 Member Function Documentation

16.316.2.1 data_space()

```
virtual L4::Cap< L4Re::Dataspace > L4Re::Vfs::Regular_file::data_space ( ) [pure virtual],  
[noexcept]
```

Get an [L4Re::Dataspace](#) object for the file.

This is used as a backend for POSIX mmap and mmap2 functions.

Note

mmap is not possible if the function returns an invalid capability.

Returns

A capability to an [L4Re::Dataspace](#) that represents the file contents in an [L4Re](#) way.

Implemented in [L4Re::Vfs::Be_file](#).

16.316.2.2 fdatsync()

```
virtual int L4Re::Vfs::Regular_file::fdatsync ( ) const [pure virtual], [noexcept]
```

Sync the data to persistent storage.

This is the backend for POSIX fdatsync.

Implemented in [L4Re::Vfs::Be_file](#).

16.316.2.3 fsync()

```
virtual int L4Re::Vfs::Regular_file::fsync ( ) const [pure virtual], [noexcept]
```

Sync the data and meta data to persistent storage.

This is the backend for POSIX fsync.

Implemented in [L4Re::Vfs::Be_file](#).

16.316.2.4 ftruncate64()

```
virtual int L4Re::Vfs::Regular_file::ftruncate64 (  
    off64_t pos ) [pure virtual], [noexcept]
```

Truncate the file at the given position.

This function is the backend for truncate and friends.

Parameters

| | |
|------------|--|
| <i>pos</i> | The offset at which the file shall be truncated. |
|------------|--|

Returns

0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

16.316.2.5 get_lock()

```
virtual int L4Re::Vfs::Regular_file::get_lock (
    struct flock64 * lock ) [pure virtual], [noexcept]
```

Test if the given lock can be placed in the file.

This function is used as backend for fcntl F_GETLK commands.

Parameters

| | |
|-------------|---|
| <i>lock</i> | The lock that shall be placed on the file. The <i>l_type</i> member will contain F_UNLCK if the lock could be placed. |
|-------------|---|

Returns

0 on success, <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

16.316.2.6 lseek64()

```
virtual off64_t L4Re::Vfs::Regular_file::lseek64 (
    off64_t ,
    int ) [pure virtual], [noexcept]
```

Change the file pointer.

This is the backend for POSIX seek, lseek and friends.

Returns

The new file position, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

16.316.2.7 readv()

```
virtual ssize_t L4Re::Vfs::Regular_file::readv (
    const struct iovec * ,
    int iovcnt ) [pure virtual], [noexcept]
```

Read one or more blocks of data from the file.

This function acts as backend for POSIX read and readv calls and reads data starting from the `f_pos` pointer of that open file. The file pointer is advanced according to the number of bytes read.

Returns

The number of bytes read from the file, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

16.316.2.8 set_lock()

```
virtual int L4Re::Vfs::Regular_file::set_lock (
    struct flock64 * lock,
    bool wait ) [pure virtual], [noexcept]
```

Acquire or release the given lock on the file.

This function is used as backend for `fcntl` `F_SETLK` and `F_SETLKW` commands.

Parameters

| | |
|-------------|---|
| <i>lock</i> | The lock that shall be placed on the file. |
| <i>wait</i> | If true, then block if there is a conflicting lock on the file. |

Returns

0 on success, <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

16.316.2.9 writev()

```
virtual ssize_t L4Re::Vfs::Regular_file::writev (
    const struct iovec * ,
    int iovcnt ) [pure virtual], [noexcept]
```

Write one or more blocks of data to the file.

This function acts as backend for POSIX write and writev calls. The data is written starting at the current file pointer and the file pointer must be advanced according to the number of written bytes.

Returns

The number of bytes written to the file, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

The documentation for this class was generated from the following file:

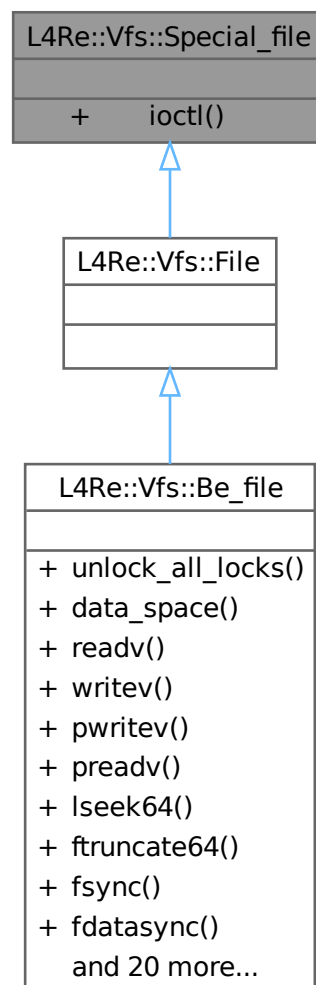

- l4/l4re_vfs/vfs.h

16.317 L4Re::Vfs::Special_file Class Reference

Interface for a POSIX file that provides special file semantics.

```
#include <vfs.h>

Public Member Functions

- virtual int [ioctl](#) (unsigned long cmd, va_list args) noexcept=0
The famous IO control.

16.317.1 Detailed Description

Interface for a POSIX file that provides special file semantics.

Real objects always use the combined [L4Re::Vfs::File](#) interface.

Definition at line [419](#) of file [vfs.h](#).

16.317.2 Member Function Documentation

16.317.2.1 ioctl()

```
virtual int L4Re::Vfs::Special_file::ioctl (
    unsigned long cmd,
    va_list args ) [pure virtual], [noexcept]
```

The famous IO control.

Backend for POSIX generic object invocation ioctl.

Parameters

| | |
|-------------|--|
| <i>cmd</i> | The ioctl command. |
| <i>args</i> | The arguments for the ioctl, usually some kind of pointer. |

Returns

>=0 on success, or <0 on error.

Implemented in [L4Re::Vfs::Be_file](#).

The documentation for this class was generated from the following file:

- l4/l4re_vfs/vfs.h

16.318 L4Re::Video::Color_component Class Reference

A color component.

```
#include <colors>
```

Collaboration diagram for L4Re::Video::Color_component:

| L4Re::Video::Color_component |
|--|
| <ul style="list-style-type: none"> + Color_component() + Color_component() + size() + shift() + operator==() + get() + set() + dump() |

Public Member Functions

- **Color_component ()**
Constructor.
- **Color_component** (unsigned char bits, unsigned char **shift**)
Constructor.
- unsigned char **size** () const
Return the number of bits used by the component.
- unsigned char **shift** () const
Return the position of the component in the pixel.
- bool **operator==** (**Color_component** const &o) const
Compare for equality.
- int **get** (unsigned long v) const
Get component from value (normalized to 16bits).
- long unsigned **set** (int v) const
Transform 16bit normalized value to the component in the color space.
- template<typename OUT >
void **dump** (OUT &s) const
Dump information on the view information to a stream.

16.318.1 Detailed Description

A color component.

Definition at line 21 of file [colors](#).

16.318.2 Constructor & Destructor Documentation

16.318.2.1 Color_component()

```
L4Re::Video::Color_component::Color_component (
    unsigned char bits,
    unsigned char shift ) [inline]
```

Constructor.

Parameters

| | |
|--------------|--|
| <i>bits</i> | Number of bits used by the component |
| <i>shift</i> | Position in bits of the component in the pixel |

Definition at line 36 of file [colors](#).

16.318.3 Member Function Documentation

16.318.3.1 dump()

```
template<typename OUT >
void L4Re::Video::Color_component::dump (
    OUT & s ) const [inline]
```

Dump information on the view information to a stream.

Parameters

| | |
|----------|--------|
| <i>s</i> | Stream |
|----------|--------|

Definition at line 81 of file [colors](#).

16.318.3.2 get()

```
int L4Re::Video::Color_component::get (
    unsigned long v ) const [inline]
```

Get component from value (normalized to 16bits).

Parameters

| | |
|----------|-------|
| <i>v</i> | Value |
|----------|-------|

Returns

Converted value

Definition at line [63](#) of file [colors](#).

16.318.3.3 operator==()

```
bool L4Re::Video::Color_component::operator== (
    Color_component const & o ) const [inline]
```

Compare for equality.

Returns

True if the same components are described, false if not.

Definition at line [55](#) of file [colors](#).

16.318.3.4 set()

```
long unsigned L4Re::Video::Color_component::set (
    int v ) const [inline]
```

Transform 16bit normalized value to the component in the color space.

Parameters

| | |
|----------|-------------------------------|
| <i>v</i> | Value return Converted value. |
|----------|-------------------------------|

Definition at line [73](#) of file [colors](#).

16.318.3.5 shift()

```
unsigned char L4Re::Video::Color_component::shift ( ) const [inline]
```

Return the position of the component in the pixel.

Returns

Position in bits of the component in the pixel

Definition at line 49 of file [colors](#).

Referenced by [L4Re::Video::Pixel_info::padding\(\)](#).

Flags for a [Goos](#).

Public Member Functions

- long **info** (Info *info)
Return the Goos information of the Goos.
- long **get_static_buffer** (unsigned idx, L4::lpc::Out< L4::Cap< L4Re::Dataspace > > rbuf)
Return a static buffer of a Goos.
- long **create_buffer** (unsigned long size, L4::lpc::Out< L4::Cap< L4Re::Dataspace > > rbuf)
Create a buffer.
- long **delete_buffer** (unsigned idx)
Delete a buffer.
- int **create_view** (View *view, l4_utcb_t *utcb=l4_utcb()) const noexcept
Create a view.
- int **delete_view** (View const &v, l4_utcb_t *utcb=l4_utcb()) const noexcept
Delete a view.
- View **view** (unsigned index) const noexcept
Return a view.
- long **refresh** (int x, int y, int w, int h)
Trigger refreshing of the given area on the virtual screen.

Public Member Functions inherited from L4::Kobject

- l4_msgtag_t **dec_refcnt** (l4_mword_t diff, l4_utcb_t *utcb=l4_utcb())
Decrement the in kernel reference counter for the object.

Additional Inherited Members

Protected Types inherited from

L4::Kobject_t< Goos, L4::Kobject, L4RE_PROTO_GOOS >

- typedef Goos **Class**
The target interface type (inheriting from Kobject_t)
- typedef Typeid::Iface< PROTO, Goos > **__iface**
The interface description for the derived class.
- typedef Typeid::Merge_list< Typeid::Iface_list< __iface >, typename Base::__iface_list > **__iface_list**
The list of all RPC interfaces provided directly or through inheritance.

Protected Member Functions inherited from

L4::Kobject_t< Goos, L4::Kobject, L4RE_PROTO_GOOS >

- L4::Cap< Class > **c** () const noexcept
Get the capability to ourselves.

Protected Member Functions inherited from L4::Kobject

- l4_cap_idx_t **cap** () const noexcept
Return capability selector.

Static Protected Member Functions inherited from [L4::Kobject_t< Goos, L4::Kobject, L4RE_PROTO_GOOS >](#)

- static void `__check_protocols__()` noexcept
Helper to check for protocol conflicts.

16.319.1 Detailed Description

Class that abstracts framebuffers.

A framebuffer is the pixel data that is displayed on a screen and a [Goos](#) object lets the user manipulate that data. A [Goos](#) makes use of two kinds of objects:

- Buffers in the form of [L4Re::Dataspace](#) objects. These hold the bytes for the pixel data.
- [L4Re::Video::View](#) objects.

Both can either be static, that is their number and configuration is fixed and determined by the framebuffer, or they can be dynamic, with the user allocating them.

Definition at line 223 of file [goos](#).

16.319.2 Member Enumeration Documentation

16.319.2.1 Flags

```
enum L4Re::Video::Goos::Flags
```

Flags for a [Goos](#).

Enumerator

| | |
|--------------------------------|--|
| <code>F_auto_refresh</code> | The graphics display is automatically refreshed. |
| <code>F_pointer</code> | We have a mouse pointer. |
| <code>F_dynamic_views</code> | Supports dynamically allocated views. |
| <code>F_dynamic_buffers</code> | Supports dynamically allocated buffers. |

Definition at line 228 of file [goos](#).

16.319.3 Member Function Documentation

16.319.3.1 `create_buffer()`

```
long L4Re::Video::Goos::create\_buffer (
    unsigned long size,
    L4::Ipc::Out< L4::Cap< L4Re::Dataspace > > rbuf )
```

Create a buffer.

Parameters

| | |
|-------------|---|
| <i>size</i> | Size of buffer in bytes. |
| <i>rbuf</i> | Capability slot to point the buffer dataspace to. |

Return values

| | |
|----------|--|
| ≥ 0 | Success, the value returned is the buffer index. |
| < 0 | Error |

16.319.3.2 create_view()

```
int L4Re::Video::Goos::create_view (
    View * view,
    l4_utcb_t * utcb = l4_utcb() ) const [inline], [noexcept]
```

Create a view.

Parameters

| | | |
|-----|-------------|--|
| out | <i>view</i> | A view object. |
| | <i>utcb</i> | UTCB of the caller. This is a default parameter. |

Return values

| | |
|----------|--|
| ≥ 0 | Success, the value returned is the view index. |
| < 0 | Error |

Definition at line 312 of file [goos](#).

16.319.3.3 delete_buffer()

```
long L4Re::Video::Goos::delete_buffer (
    unsigned idx )
```

Delete a buffer.

Parameters

| | |
|------------|-----------------------------------|
| <i>idx</i> | Buffer to delete. |
|------------|-----------------------------------|

Return values

| | |
|-------|---------|
| 0 | Success |
| < 0 | Error |

16.319.3.4 delete_view()

```
int L4Re::Video::Goos::delete_view (
    View const & v,
    l4_utcb_t * utcb = l4_utcb() ) const [inline], [noexcept]
```

Delete a view.

Parameters

| | |
|-------------|--|
| <i>v</i> | The view object to delete. |
| <i>utcb</i> | UTCB of the caller. This is a default parameter. |

Return values

| | |
|----|---------|
| 0 | Success |
| <0 | Error |

Definition at line 332 of file [goos](#).

16.319.3.5 get_static_buffer()

```
long L4Re::Video::Goos::get_static_buffer (
    unsigned idx,
    L4::Ipc::Out< L4::Cap< L4Re::Dataspace > > rbuf )
```

Return a static buffer of a [Goos](#).

Parameters

| | |
|-------------|---|
| <i>idx</i> | Index of the static buffer. |
| <i>rbuf</i> | Capability slot to point the buffer dataspace to. |

Return values

| | |
|----|---------|
| 0 | Success |
| <0 | Error |

16.319.3.6 info()

```
long L4Re::Video::Goos::info (
    Info * info )
```

Return the [Goos](#) information of the [Goos](#).

Parameters

| | | |
|-----|-------------|---|
| out | <i>info</i> | Goos information structure pointer. |
|-----|-------------|---|

Return values

| | |
|----|---------|
| 0 | Success |
| <0 | Error |

16.319.3.7 view()

```
View L4Re::Video::Goos::view (
    unsigned index ) const [inline], [noexcept]
```

Return a view.

Parameters

| | |
|--------------|------------------------------|
| <i>index</i> | Index of the view to return. |
|--------------|------------------------------|

Returns

The view.

Definition at line 363 of file [goos](#).

The documentation for this class was generated from the following file:

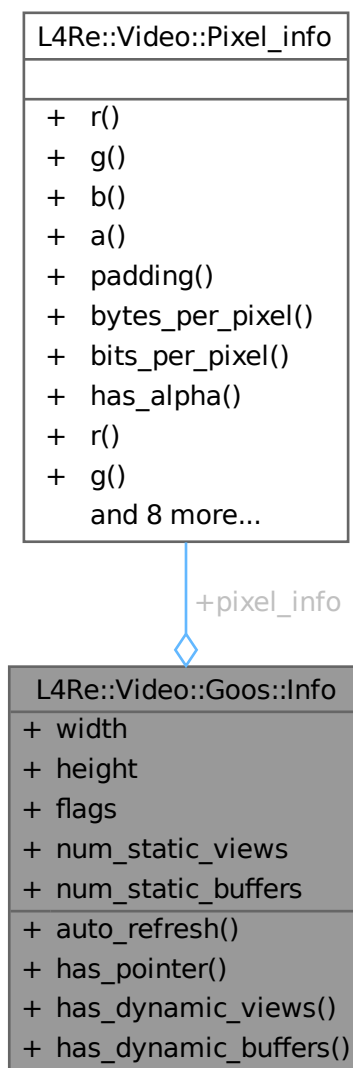

- [l4/re/video/goos](#)

16.320 L4Re::Video::Goos::Info Struct Reference

Information structure of a [Goos](#).

```
#include <goos>
```

Collaboration diagram for L4Re::Video::Goos::Info:

Public Member Functions

- bool **auto_refresh** () const
Return whether this [Goos](#) does auto refreshing or the view refresh functions must be used to make changes visible.
- bool **has_pointer** () const
Return whether a pointer is used by the provider of the [Goos](#).
- bool **has_dynamic_views** () const
Return whether dynamic view are supported.
- bool **has_dynamic_buffers** () const
Return whether dynamic buffers are supported.

Data Fields

- unsigned long **width**
Width.
- unsigned long **height**
Height.
- unsigned **flags**
Flags, see [Flags](#).
- unsigned **num_static_views**
Number of static view.
- unsigned **num_static_buffers**
Number of static buffers.
- [Pixel_info](#) **pixel_info**
Pixel information.

16.320.1 Detailed Description

- template<typename OUT >
void [dump](#) (OUT &s) const
Dump information on the pixel to a stream.

16.321.1 Detailed Description

Pixel information.

This class wraps the information on a pixel, such as the size and position of each color component in the pixel.

Definition at line 94 of file [colors](#).

16.321.2 Constructor & Destructor Documentation

16.321.2.1 Pixel_info() [1/2]

```
L4Re::Video::Pixel_info::Pixel_info (
    unsigned char bpp,
    char r,
    char rs,
    char g,
    char gs,
    char b,
    char bs,
    char a = 0,
    char as = 0 ) [inline]
```

Constructor.

Parameters

| | |
|------------|---------------------------------------|
| <i>bpp</i> | Size of pixel in bytes. |
| <i>r</i> | Red component size. |
| <i>rs</i> | Red component shift. |
| <i>g</i> | Green component size. |
| <i>gs</i> | Green component shift. |
| <i>b</i> | Blue component size. |
| <i>bs</i> | Blue component shift. |
| <i>a</i> | Alpha component size, defaults to 0. |
| <i>as</i> | Alpha component shift, defaults to 0. |

Definition at line 212 of file [colors](#).

16.321.2.2 Pixel_info() [2/2]

```
template<typename VBI >
L4Re::Video::Pixel_info::Pixel_info (
    VBI const * vbi ) [inline], [explicit]
```

Convenience constructor.

Parameters

| | |
|------------|--|
| <i>vbi</i> | Suitable information structure. Convenience constructor to create the pixel info from a VESA Framebuffer Info. |
|------------|--|

Definition at line 224 of file [colors](#).

16.321.3 Member Function Documentation

16.321.3.1 a() [1/2]

```
Color_component const & L4Re::Video::Pixel_info::a ( ) const [inline]
```

Return the alpha color component of the pixel.

Returns

Alpha color component.

Definition at line 123 of file [colors](#).

16.321.3.2 a() [2/2]

```
void L4Re::Video::Pixel_info::a (  
    Color_component const & c ) [inline]
```

Set the alpha color component of the pixel.

Parameters

| | |
|---|------------------------|
| c | Alpha color component. |
|---|------------------------|

Definition at line 187 of file [colors](#).

16.321.3.3 b() [1/2]

```
Color_component const & L4Re::Video::Pixel_info::b ( ) const [inline]
```

Return the blue color component of the pixel.

Returns

Blue color component.

Definition at line 117 of file [colors](#).

16.321.3.4 b() [2/2]

```
void L4Re::Video::Pixel_info::b (  
    Color_component const & c ) [inline]
```

Set the blue color component of the pixel.

Parameters

| | |
|---|-----------------------|
| c | Blue color component. |
|---|-----------------------|

Definition at line 181 of file [colors](#).

16.321.3.5 bits_per_pixel()

```
unsigned char L4Re::Video::Pixel_info::bits_per_pixel ( ) const [inline]
```

Number of bits of the pixel.

Returns

Number of bits used by the pixel.

Definition at line 156 of file [colors](#).

References [L4Re::Video::Color_component::size\(\)](#).

Here is the call graph for this function:

**16.321.3.6 bytes_per_pixel() [1/2]**

```
unsigned char L4Re::Video::Pixel_info::bytes_per_pixel ( ) const [inline]
```

Query size of pixel in bytes.

Returns

Size of pixel in bytes.

Definition at line 150 of file [colors](#).

16.321.3.7 bytes_per_pixel() [2/2]

```
void L4Re::Video::Pixel_info::bytes_per_pixel (
    unsigned char bpp ) [inline]
```

Set the size of the pixel in bytes.

Parameters

| | |
|------------|-------------------------|
| <i>bpp</i> | Size of pixel in bytes. |
|------------|-------------------------|

Definition at line 193 of file [colors](#).

16.321.3.8 dump()

```
template<typename OUT >
void L4Re::Video::Pixel_info::dump (
    OUT & s ) const [inline]
```

Dump information on the pixel to a stream.

Parameters

| | |
|----------|--------|
| s | Stream |
|----------|--------|

Definition at line 246 of file [colors](#).

Referenced by [L4Re::Video::View::Info::dump\(\)](#).

Here is the caller graph for this function:

16.321.3.9 g() [1/2]

```
Color_component const & L4Re::Video::Pixel_info::g ( ) const [inline]
```

Return the green color component of the pixel.

Returns

Green color component.

Definition at line 111 of file [colors](#).

16.321.3.10 g() [2/2]

```
void L4Re::Video::Pixel_info::g (
    Color_component const & c ) [inline]
```

Set the green color component of the pixel.

Parameters

| | |
|---|------------------------|
| c | Green color component. |
|---|------------------------|

Definition at line 175 of file [colors](#).

16.321.3.11 has_alpha()

```
bool L4Re::Video::Pixel_info::has_alpha ( ) const [inline]
```

Return whether the pixel has an alpha channel.

Returns

True if the pixel has an alpha channel, false if not.

Definition at line 163 of file [colors](#).

References [L4Re::Video::Color_component::size\(\)](#).

Here is the call graph for this function:

**16.321.3.12 operator==()**

```
bool L4Re::Video::Pixel_info::operator== (
    Pixel_info const & o ) const [inline]
```

Compare for complete equality of the color space.

Parameters

| | |
|---|---|
| o | A Pixel_info to compare to. |
|---|---|

Returns

true if the both [Pixel_info](#)'s are equal, false if not.

Definition at line 236 of file [colors](#).

16.321.3.13 padding()

```
Color_component const L4Re::Video::Pixel_info::padding ( ) const [inline]
```

Compute the padding pseudo component.

The padding pseudo component represents the tailing bits that are reserved in RGB32 and similar pixel formats.

Returns

Padding pseudo component.

Definition at line 131 of file [colors](#).

References [L4Re::Video::Color_component::shift\(\)](#), and [L4Re::Video::Color_component::size\(\)](#).

Here is the call graph for this function:

**16.321.3.14 r() [1/2]**

```
Color_component const & L4Re::Video::Pixel_info::r ( ) const [inline]
```

Return the red color component of the pixel.

Returns

Red color component.

Definition at line 105 of file [colors](#).

16.321.3.15 r() [2/2]

```
void L4Re::Video::Pixel_info::r (
    Color_component const & c ) [inline]
```

Set the red color component of the pixel.

Parameters

| | |
|---|----------------------|
| c | Red color component. |
|---|----------------------|

Definition at line 169 of file [colors](#).

The documentation for this class was generated from the following file:

- [l4/re/video/colors](#)

16.322 L4Re::Video::View Class Reference

[View](#) of a framebuffer.

```
#include <goos>
```

Collaboration diagram for L4Re::Video::View:

|--|
| <ul style="list-style-type: none"> + info() + set_info() + set_viewport() + stack() + push_top() + push_bottom() + refresh() + valid() |

Data Structures

- struct [Info](#)
Information structure of a view.

Public Types

- enum [Flags](#) {
[F_none](#) = 0x00 , [F_set_buffer](#) = 0x01 , [F_set_buffer_offset](#) = 0x02 , [F_set_bytes_per_line](#) = 0x04 ,
[F_set_pixel](#) = 0x08 , [F_set_position](#) = 0x10 , [F_dyn_allocated](#) = 0x20 , [F_set_background](#) = 0x40 ,
[F_set_flags](#) = 0x80 , [F_fully_dynamic](#) }
Flags on a view.
- enum [V_flags](#) { [F_above](#) = 0x1000 , [F_flags_mask](#) = 0xff000 }
Property flags of a view.

Public Member Functions

- `int info (Info *info) const noexcept`
Return the view information of the view.
- `int set_info (Info const &info) const noexcept`
Set the information structure for this view.
- `int set_viewport (int scr_x, int scr_y, int w, int h, unsigned long buf_offset) const noexcept`
Set the position of the view in the [Goos](#).
- `int stack (View const &pivot, bool behind=true) const noexcept`
Move this view in the view stack.
- `int push_top () const noexcept`
Make this view the top-most view.
- `int push_bottom () const noexcept`
Push this view the back.
- `int refresh (int x, int y, int w, int h) const noexcept`
Refresh/Redraw the view.
- `bool valid () const`
Return whether this view is valid.

16.322.1 Detailed Description

[View](#) of a framebuffer.

A view is a rectangular subset of a framebuffer managed by a [Goos](#) object. The [Goos](#) orders multiple views in a stack which determines which view is on top in case they overlap. The view's pixel data is provided by a backing buffer, which must belong to the [Goos](#). It can be static or dynamically allocated, depending on the framebuffer.

Definition at line 39 of file [goos](#).

16.322.2 Member Enumeration Documentation

16.322.2.1 Flags

```
enum L4Re::Video::View::Flags
```

Flags on a view.

Enumerator

| | |
|-----------------------------------|---|
| <code>F_none</code> | everything for this view is static (the VESA-FB case) |
| <code>F_set_buffer</code> | buffer object for this view can be changed |
| <code>F_set_buffer_offset</code> | buffer offset can be set |
| <code>F_set_bytes_per_line</code> | bytes per line can be set |
| <code>F_set_pixel</code> | pixel type can be set |
| <code>F_set_position</code> | position on screen can be set |
| <code>F_dyn_allocated</code> | View is dynamically allocated. |
| <code>F_set_background</code> | Set view as background for session. |
| <code>F_set_flags</code> | Set view flags (. See also |

Definition at line 59 of file [goos](#).

16.322.2.2 V_flags

```
enum L4Re::Video::View::V_flags
```

Property flags of a view.

Such flags can be set or deleted with the [F_set_flags](#) operation using the [set_info\(\)](#) method.

Enumerator

| | |
|------------------------------|--|
| F_above | Flag the view as stay on top. |
| F_flags_mask | Mask containing all possible property flags. |

Definition at line 82 of file [goos](#).

16.322.3 Member Function Documentation

16.322.3.1 info()

```
int L4Re::Video::View::info (
    Info * info ) const [inline], [noexcept]
```

Return the view information of the view.

Parameters

| | | |
|-----|-------------|--------------------------------|
| out | <i>info</i> | Information structure pointer. |
|-----|-------------|--------------------------------|

Return values

| | |
|----|---------|
| 0 | Success |
| <0 | Error |

Definition at line 367 of file [goos](#).

16.322.3.2 refresh()

```
int L4Re::Video::View::refresh (
    int x,
    int y,
    int w,
    int h ) const [inline], [noexcept]
```

Refresh/Redraw the view.

Parameters

| | |
|----------|-------------|
| <i>x</i> | X position. |
| <i>y</i> | Y position. |
| <i>w</i> | Width. |
| <i>h</i> | Height. |

Return values

| | |
|----|---------|
| 0 | Success |
| <0 | Error |

Definition at line 379 of file [goos](#).

16.322.3.3 set_info()

```
int L4Re::Video::View::set_info (
    Info const & info ) const [inline], [noexcept]
```

Set the information structure for this view.

Parameters

| | |
|-------------|------------------------|
| <i>info</i> | Information structure. |
|-------------|------------------------|

Return values

| | |
|----|---------|
| 0 | Success |
| <0 | Error |

The function will also set the view port according to the values given in the information structure.

Definition at line 371 of file [goos](#).

16.322.3.4 set_viewport()

```
int L4Re::Video::View::set_viewport (
    int scr_x,
    int scr_y,
    int w,
    int h,
    unsigned long buf_offset ) const [inline], [noexcept]
```

Set the position of the view in the [Goos](#).

Parameters

| | |
|-------------------|-------------------------------|
| <i>scr_x</i> | X position |
| <i>scr_y</i> | Y position |
| <i>w</i> | Width |
| <i>h</i> | Height |
| <i>buf_offset</i> | Offset in the buffer in bytes |

Return values

| | |
|----|---------|
| 0 | Success |
| <0 | Error |

Definition at line 383 of file [goos](#).

References [L4Re::Video::View::Info::buffer_index](#), [L4Re::Video::View::Info::buffer_offset](#), [L4Re::Video::View::Info::bytes_per_line](#), [L4Re::Video::View::Info::flags](#), [L4Re::Video::View::Info::height](#), [L4Re::Video::View::Info::pixel_info](#), [L4Re::Video::View::Info::view_index](#), [L4Re::Video::View::Info::width](#), [L4Re::Video::View::Info::xpos](#), and [L4Re::Video::View::Info::ypos](#).

16.322.3.5 stack()

```
int L4Re::Video::View::stack (
    View const & pivot,
    bool behind = true ) const [inline], [noexcept]
```

Move this view in the view stack.

Parameters

| | |
|---------------|--|
| <i>pivot</i> | View to move relative to |
| <i>behind</i> | When true move the view behind the pivot view, if false move the view before the pivot view. |

Return values

| | |
|----|---------|
| 0 | Success |
| <0 | Error |

Definition at line 375 of file [goos](#).

16.323.1 Detailed Description

Information structure of a view.

Definition at line 91 of file [goos](#).

The documentation for this struct was generated from the following file:

- l4/re/video/goos

16.324 l4re_aux_t Struct Reference

Auxiliary descriptor.

```
#include <l4aux.h>
```

Collaboration diagram for l4re_aux_t:

| l4re_aux_t |
|-------------|
| + binary |
| + kip_ds |
| + dbg_lvl |
| + ldr_flags |
| + ldr_base |
| |

Data Fields

- char const * **binary**
Binary name.
- [l4_cap_idx_t](#) **kip_ds**
Data space of the KIP.
- [l4_umword_t](#) **dbg_lvl**
Debug levels for l4re.
- [l4_umword_t](#) **ldr_flags**
Flags for l4re, see l4re_aux_ldr_flags_t.
- [l4_addr_t](#) **ldr_base**
Load offset of executable.

16.324.1 Detailed Description

Auxiliary descriptor.

Definition at line 40 of file [l4aux.h](#).

The documentation for this struct was generated from the following file:

- [l4/re/l4aux.h](#)

16.325 l4re_ds_stats_t Struct Reference

Information about the data space.

```
#include <dataspace.h>
```

Collaboration diagram for l4re_ds_stats_t:

| l4re_ds_stats_t | |
|-----------------|-------|
| + | size |
| + | flags |
| | |

Data Fields

- l4re_ds_size_t **size**
size
- l4re_ds_flags_t **flags**
flags

16.325.1 Detailed Description

Information about the data space.

Definition at line 38 of file [dataspace.h](#).

The documentation for this struct was generated from the following file:

- [l4re/c/dataspace.h](#)

16.326 l4re_elf_aux_mword_t Struct Reference

Auxiliary vector element for a single unsigned data word.

```
#include <elf_aux.h>
```

Collaboration diagram for l4re_elf_aux_mword_t:

| l4re_elf_aux_mword_t | |
|----------------------|--|
| | |
| | |

16.326.1 Detailed Description

Auxiliary vector element for a single unsigned data word.

Definition at line 118 of file [elf_aux.h](#).

The documentation for this struct was generated from the following file:

- [l4re/elf_aux.h](#)

16.327 l4re_elf_aux_t Struct Reference

Generic header for each auxiliary vector element.

```
#include <elf_aux.h>
```

Collaboration diagram for l4re_elf_aux_t:

16.327.1 Detailed Description

Generic header for each auxiliary vector element.

Definition at line 98 of file [elf_aux.h](#).

The documentation for this struct was generated from the following file:

- [l4re/elf_aux.h](#)

16.328 l4re_elf_aux_vma_t Struct Reference

Auxiliary vector element for a reserved virtual memory area.

```
#include <elf_aux.h>
```

Collaboration diagram for l4re_elf_aux_vma_t:

16.328.1 Detailed Description

Auxiliary vector element for a reserved virtual memory area.

Definition at line 107 of file [elf_aux.h](#).

The documentation for this struct was generated from the following file:

- [l4/re/elf_aux.h](#)

16.329 l4re_env_cap_entry_t Struct Reference

Entry in the [L4Re](#) environment array for the named initial objects.

```
#include <env.h>
```

Collaboration diagram for `l4re_env_cap_entry_t`:

| <code>l4re_env_cap_entry_t</code> |
|---------------------------------------|
| + <code>cap</code> |
| + <code>flags</code> |
| + <code>name</code> |
| + <code>l4re_env_cap_entry_t()</code> |
| + <code>l4re_env_cap_entry_t()</code> |

Public Member Functions

- `l4re_env_cap_entry_t()` [L4_NOTHROW](#)
Create an invalid entry.
- `l4re_env_cap_entry_t(char const *n, l4_cap_idx_t c, l4_umword_t f=0)` [L4_NOTHROW](#)
*Create an entry with the name *n*, capability *c*, and flags *f*.*

Data Fields

- `l4_cap_idx_t cap`
The capability selector for the object.
- `l4_umword_t flags`
Some flags for the object.
- `char name[16]`
The name of the object.

16.329.1 Detailed Description

Entry in the [L4Re](#) environment array for the named initial objects.

Definition at line 39 of file [env.h](#).

16.329.2 Constructor & Destructor Documentation

16.329.2.1 l4re_env_cap_entry_t()

```
l4re_env_cap_entry_t::l4re_env_cap_entry_t (
    char const * n,
    l4_cap_idx_t c,
    l4_umword_t f = 0 ) [inline]
```

Create an entry with the name *n*, capability *c*, and flags *f*.

Parameters

| | |
|----------|--|
| <i>n</i> | is the name of the initial object. |
| <i>c</i> | is the capability selector that refers the initial object. |
| <i>f</i> | are the additional flags for the object. |

Definition at line 70 of file [env.h](#).

References [name](#).

16.329.3 Field Documentation

16.329.3.1 flags

```
l4_umword_t l4re_env_cap_entry_t::flags
```

Some flags for the object.

Note

Currently unused.

Definition at line 50 of file [env.h](#).

Referenced by [l4re_env_get_cap_l\(\)](#).

The documentation for this struct was generated from the following file:

- [l4/re/env.h](#)

16.330 l4re_env_t Struct Reference

Initial environment data structure.

```
#include <env.h>
```

Collaboration diagram for l4re_env_t:

Data Fields

- [l4_cap_idx_t](#) **parent**
Parent object-capability.
- [l4_cap_idx_t](#) **rm**
Region map object-capability.
- [l4_cap_idx_t](#) **mem_alloc**
Memory allocator object-capability.
- [l4_cap_idx_t](#) **log**
Logging object-capability.
- [l4_cap_idx_t](#) **main_thread**

- *Object-capability of the first user thread.*
- [l4_cap_idx_t](#) **factory**
Object-capability of the factory available to the task.
- [l4_cap_idx_t](#) **scheduler**
Object capability for the scheduler set to use.
- [l4_cap_idx_t](#) **itas**
ITAS services object-capability.
- [l4_cap_idx_t](#) **first_free_cap**
First capability index available to the application.
- [l4_fpage_t](#) **utcb_area**
UTCB area of the task.
- [l4_addr_t](#) **first_free_utcb**
First UTCB within the UTCB area available to the application.
- [l4re_env_cap_entry_t](#) * **caps**
Pointer to the first entry in the initial objects array which contains [l4re_env_cap_entry_t](#) elements.

16.330.1 Detailed Description

Initial environment data structure.

See also

[Initial environment](#)

Definition at line 98 of file [env.h](#).

16.330.2 Field Documentation

16.330.2.1 caps

```
l4re\_env\_cap\_entry\_t* l4re\_env\_t::caps
```

Pointer to the first entry in the initial objects array which contains [l4re_env_cap_entry_t](#) elements.

The array is terminated by an invalid entry with a `flags` value of `~0`.

Definition at line 116 of file [env.h](#).

Referenced by [L4Re::Env::initial_caps\(\)](#), and [L4Re::Env::initial_caps\(\)](#).

The documentation for this struct was generated from the following file:

- [l4/re/env.h](#)

16.331 l4re_event_t Struct Reference

Event structure used in buffer.

```
#include <event.h>
```

Collaboration diagram for l4re_event_t:

Data Fields

- long long **time**
Time stamp of the event.
- unsigned short **type**
Type of the event.
- unsigned short **code**
Code of the event.
- int **value**
Value of the event.
- [l4_umword_t](#) **stream_id**
Stream ID.

16.331.1 Detailed Description

Event structure used in buffer.

Definition at line 29 of file [event.h](#).

The documentation for this struct was generated from the following file:

- [l4re/c/event.h](#)

16.332 l4re_video_color_component_t Struct Reference

Color component structure.

```
#include <colors.h>
```

Collaboration diagram for l4re_video_color_component_t:

| l4re_video_color_component_t | |
|------------------------------|-------|
| + | size |
| + | shift |
| | |

Data Fields

- unsigned char **size**
Size in bits.
- unsigned char **shift**
offset in pixel

16.332.1 Detailed Description

Color component structure.

Definition at line 20 of file [colors.h](#).

The documentation for this struct was generated from the following file:

- [l4/re/c/video/colors.h](#)

16.333 l4re_video_goos_info_t Struct Reference

Goos information structure.

```
#include <goos.h>
```

Collaboration diagram for `l4re_video_goos_info_t`:

Data Fields

- unsigned long **width**
Width of the goos.
- unsigned long **height**
Height of the goos.
- unsigned **flags**
Flags of the framebuffer, see [l4re_video_goos_info_flags_t](#).
- unsigned **num_static_views**
Number of static views.
- unsigned **num_static_buffers**
Number of static buffers.
- [l4re_video_pixel_info_t](#) **pixel_info**
Pixel layout of the goos.

16.333.1 Detailed Description

Goos information structure.

Definition at line 40 of file [goos.h](#).

The documentation for this struct was generated from the following file:

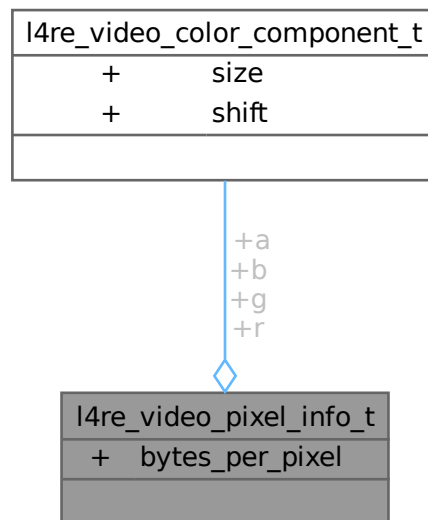

- [l4re/c/video/goos.h](#)

16.334 l4re_video_pixel_info_t Struct Reference

Pixel_info structure.

```
#include <colors.h>
```

Collaboration diagram for l4re_video_pixel_info_t:

Data Fields

- [l4re_video_color_component_t a](#)
Colors.
- unsigned char **bytes_per_pixel**
Bytes per pixel.

16.334.1 Detailed Description

Pixel_info structure.

Definition at line 30 of file [colors.h](#).

The documentation for this struct was generated from the following file:

- [l4re/c/video/colors.h](#)

16.335 l4re_video_view_info_t Struct Reference

View information structure.

```
#include <view.h>
```

Collaboration diagram for l4re_video_view_info_t:

Data Fields

- unsigned **flags**
Flags.
- unsigned **view_index**
Number of view in the goos.
- unsigned long **height**
Position in goos and size of view.
- unsigned long **buffer_offset**
Memory offset in goos buffer.
- unsigned long **bytes_per_line**
Size of line in view.
- [l4re_video_pixel_info_t](#) **pixel_info**
Pixel info.
- unsigned **buffer_index**
Number of buffer of goos.

16.335.1 Detailed Description

View information structure.

Definition at line 48 of file [view.h](#).

The documentation for this struct was generated from the following file:

- [l4re/c/video/view.h](#)

16.336 l4re_video_view_t Struct Reference

C representation of a goos view.

```
#include <view.h>
```

Collaboration diagram for l4re_video_view_t:

16.336.1 Detailed Description

C representation of a goos view.

A view is a visible rectangle that provides a view to the contents of a buffer (frame buffer) memory object and is placed on a real screen.

Definition at line 67 of file [view.h](#).

The documentation for this struct was generated from the following file:

- [l4/re/c/video/view.h](#)

16.337 l4shmc_ringbuf_head_t Struct Reference

Head field of a ring buffer.

```
#include <ringbuf.h>
```

Collaboration diagram for l4shmc_ringbuf_head_t:

| l4shmc_ringbuf_head_t | |
|-----------------------|--------------|
| + | next_read |
| + | next_write |
| + | bytes_filled |
| + | sender_waits |
| + | data |
| | |

Data Fields

- unsigned **next_read**
offset to next read packet
- unsigned **next_write**
offset to next write packet
- unsigned **bytes_filled**
bytes filled in buffer
- unsigned **sender_waits**
sender waiting?
- char **data** []
tail pointer -> data

16.337.1 Detailed Description

Head field of a ring buffer.

Definition at line 58 of file [ringbuf.h](#).

The documentation for this struct was generated from the following file:

- [l4shmc/ringbuf.h](#)

16.338 l4shmc_ringbuf_t Struct Reference

Ring buffer.

```
#include <ringbuf.h>
```

Collaboration diagram for l4shmc_ringbuf_t:

Data Fields

- `l4shmc_area_t * _area`
L4SHM area this buffer is located in.
- `l4_cap_idx_t _owner`
owner (attached to send/recv signal)
- `l4shmc_chunk_t _chunk`
chunk descriptor
- `unsigned _size`
chunk size // XXX do we need this?
- `char * _chunkname`
name of the ring buffer chunk
- `char * _signame`
base name of the ring buffer signals
- `l4shmc_ringbuf_head_t * _addr`
pointer to ring buffer head
- `l4shmc_signal_t _signal_full`
"full" signal - triggered when data is produced
- `l4shmc_signal_t _signal_empty`
"empty" signal - triggered when data is consumed

16.338.1 Detailed Description

Ring buffer.

Definition at line 84 of file [ringbuf.h](#).

The documentation for this struct was generated from the following file:

- [l4/shmc/ringbuf.h](#)

16.339 l4util_l4mod_info Struct Reference

Base module structure.

```
#include <l4mod.h>
```

Collaboration diagram for `l4util_l4mod_info`:

| <code>l4util_l4mod_info</code> |
|--------------------------------|
| + flags |
| + cmdline |
| + mods_addr |
| + mods_count |
| + vbe_ctrl_info |
| + vbe_mode_info |

Data Fields

- [l4_uint64_t](#) **flags**
Flags.
- [l4_uint64_t](#) **cmdline**
Pointer to kernel command line.
- [l4_uint64_t](#) **mods_addr**
Module list.
- [l4_uint32_t](#) **mods_count**
Number of modules.
- [l4_uint64_t](#) **vbe_ctrl_info**
VESA video info, valid if one of vbe_ctrl_info or vbe_mode_info is not zero.
- [l4_uint64_t](#) **vbe_mode_info**
VESA video mode info.

16.339.1 Detailed Description

Base module structure.

Definition at line 36 of file [l4mod.h](#).

16.339.2 Field Documentation**16.339.2.1 vbe_ctrl_info**

```
l4\_uint64\_t l4util_l4mod_info::vbe_ctrl_info
```

VESA video info, valid if one of vbe_ctrl_info or vbe_mode_info is not zero.

VESA video controller info

Definition at line 48 of file [l4mod.h](#).

The documentation for this struct was generated from the following file:

- [l4/util/l4mod.h](#)

16.340 l4util_l4mod_mod Struct Reference

A single module.

```
#include <l4mod.h>
```

Collaboration diagram for l4util_l4mod_mod:

| l4util_l4mod_mod |
|------------------|
| + flags |
| + mod_start |
| + mod_end |
| + cmdline |
| |

Data Fields

- [l4_uint64_t](#) **flags**
Module flags ([l4util_l4mod_mod_info_flag](#))
- [l4_uint64_t](#) **mod_start**
Starting address of module in memory.
- [l4_uint64_t](#) **mod_end**
End address of module in memory.
- [l4_uint64_t](#) **cmdline**
Module command line.

16.340.1 Detailed Description

A single module.

Definition at line 27 of file [l4mod.h](#).

The documentation for this struct was generated from the following file:

- [l4/util/l4mod.h](#)

16.341 l4util_mb_addr_range_t Struct Reference

INT-15, AX=E820 style "AddressRangeDescriptor" ...with a "size" parameter on the front which is the structure size - 4, pointing to the next one, up until the full buffer length of the memory map has been reached.

```
#include <mb_info.h>
```

Collaboration diagram for `l4util_mb_addr_range_t`:

| l4util_mb_addr_range_t | |
|------------------------|-------------|
| + | struct_size |
| + | addr |
| + | size |
| + | type |
| | |

Data Fields

- [l4_uint32_t struct_size](#)
Size of structure.
- [l4_uint64_t addr](#)
Start address.
- [l4_uint64_t size](#)
Size of memory range.
- [l4_uint32_t type](#)
type of memory range

16.341.1 Detailed Description

INT-15, AX=E820 style "AddressRangeDescriptor" ...with a "size" parameter on the front which is the structure size - 4, pointing to the next one, up until the full buffer length of the memory map has been reached.

Definition at line 48 of file [mb_info.h](#).

| + num |
| + mmap_length |
| and 12 more... |

Data Fields

- [l4_uint32_t](#) **flags**
MultiBoot info version number.
- [l4_uint32_t](#) **mem_lower**
available memory below 1MB
- [l4_uint32_t](#) **mem_upper**
available memory starting from 1MB [kB]
- [l4_uint32_t](#) **boot_device**
"root" partition
- [l4_uint32_t](#) **cmdline**
Kernel command line.
- [l4_uint32_t](#) **mods_count**
number of modules
- [l4_uint32_t](#) **mods_addr**
module list
- [l4_uint32_t](#) **mmap_length**
size of memory mapping buffer
- [l4_uint32_t](#) **mmap_addr**
address of memory mapping buffer

- [l4_uint32_t drives_length](#)
size of drive info buffer
- [l4_uint32_t drives_addr](#)
address of driver info buffer
- [l4_uint32_t config_table](#)
ROM configuration table.
- [l4_uint32_t boot_loader_name](#)
Boot Loader Name.
- [l4_uint32_t apm_table](#)
APM table.
- [l4_uint32_t vbe_ctrl_info](#)
VESA video controller info.
- [l4_uint32_t vbe_mode_info](#)
VESA video mode info.
- [l4_uint16_t vbe_mode](#)
VESA video mode number.
- [l4_uint16_t vbe_interface_seg](#)
VESA segment of prot BIOS interface.
- [l4_uint16_t vbe_interface_off](#)
VESA offset of prot BIOS interface.
- [l4_uint16_t vbe_interface_len](#)
VESA lenght of prot BIOS interface.

16.344.1 Detailed Description

MultiBoot Info description.

This is the struct passed to the boot image. This is done by placing its address in the EAX register.

Definition at line 247 of file [mb_info.h](#).

The documentation for this struct was generated from the following file:

- [l4/util/mb_info.h](#)

16.345 l4util_mb_mod_t Struct Reference

The structure type "mod_list" is used by the [multiboot_info](#) structure.

```
#include <mb_info.h>
```

Collaboration diagram for `l4util_mb_mod_t`:

Data Fields

- `l4_uint32_t mod_start`
Starting address of module in memory.
- `l4_uint32_t mod_end`
End address of module in memory.
- `l4_uint32_t cmdline`
Module command line.
- `l4_uint32_t pad`
padding to take it to 16 bytes

16.345.1 Detailed Description

The structure type "mod_list" is used by the [multiboot_info](#) structure.

Definition at line 33 of file [mb_info.h](#).

Number of images.
- [l4_uint8_t reserved0](#)
Reserved for page function.

direct color

- [l4_uint8_t red_mask_size](#)
Size of direct color red mask in bits.
- [l4_uint8_t red_field_position](#)
Bit position of LSB of red mask.
- [l4_uint8_t green_mask_size](#)
Size of direct color green mask in bits.
- [l4_uint8_t green_field_position](#)
Bit position of LSB of green mask.
- [l4_uint8_t blue_mask_size](#)
Size of direct color blue mask in bits.
- [l4_uint8_t blue_field_position](#)
Bit position of LSB of blue mask.
- [l4_uint8_t reserved_mask_size](#)
Size of direct color reserved mask in bits.
- [l4_uint8_t reserved_field_position](#)
Bit position of LSB of reserved mask.

- [l4_uint8_t direct_color_mode_info](#)

Direct color mode attributes.

>= VESA version 2.0

- [l4_uint32_t phys_base](#)
Physical address for flat memory memory frame buffer.
- [l4_uint32_t reserved1](#)
Reserved – always set to 0.
- [l4_uint16_t reversed2](#)
Reserved – always set to 0.

>= VESA version 3.0

- [l4_uint16_t linear_bytes_per_scanline](#)
Bytes per scan line for linear modes.
- [l4_uint8_t banked_number_of_image_pages](#)
Number of images for banked modes.
- [l4_uint8_t linear_number_of_image_pages](#)
Number of images for linear modes.
- [l4_uint8_t linear_red_mask_size](#)
Size of direct color red mask (linear modes).
- [l4_uint8_t linear_red_field_position](#)
Bit position of LSB of red mask (linear modes).
- [l4_uint8_t linear_green_mask_size](#)
Size of direct color green mask (linear modes).
- [l4_uint8_t linear_green_field_position](#)
Bit position of LSB of green mask (linear modes).
- [l4_uint8_t linear_blue_mask_size](#)
Size of direct color blue mask (linear modes).
- [l4_uint8_t linear_blue_field_position](#)
Bit position of LSB of blue mask (linear modes).
- [l4_uint8_t linear_reserved_mask_size](#)
Size of direct color reserved mask (linear modes).
- [l4_uint8_t linear_reserved_field_position](#)
Bit position of LSB of reserved mask (linear modes).
- [l4_uint32_t max_pixel_clock](#)
Maximum pixel clock (in Hz) for graphics mode.
- [l4_uint8_t reserved3](#) [190]
Reserved (padding)

16.347.1 Detailed Description

VBE mode information.

Find a device by the hardware interface identifier (HID).
- [int next_device](#) ([Device](#) *child, [int depth=L4VBUS_MAX_DEPTH](#), [l4vbus_device_t](#) *devinfo=0) const
Find next child following [child](#).
- [int device](#) ([l4vbus_device_t](#) *devinfo) const
Obtain detailed information about a [Vbus](#) device.
- [int get_resource](#) ([unsigned res_idx](#), [l4vbus_resource_t](#) *res) const
Obtain the resource description of an individual device resource.
- [int is_compatible](#) ([char const](#) *cid) const
Check if the given device has a compatibility ID (CID) or HID that matches [cid](#).
- [bool operator==](#) ([Device](#) const &o) const
Test if two devices are the same [Vbus](#) device.
- [bool operator!=](#) ([Device](#) const &o) const
Test if two [Vbus](#) devices are not the same.

Public Member Functions inherited from [L4vbus::Pm< Device >](#)

- [int pm_suspend](#) () const
Suspend the device.
- [int pm_resume](#) () const
Resume the device.

Protected Attributes

- [L4::Cap< Vbus > _bus](#)
The [Vbus](#) capability where this device is located on.
- [l4vbus_device_handle_t _dev](#)
The device handle for this device.

16.348.1 Detailed Description

[Device](#) on a [L4vbus::Vbus](#).

Definition at line 83 of file [vbus](#).

16.348.2 Constructor & Destructor Documentation

16.348.2.1 Device()

```
L4vbus::Device::Device (
    L4::Cap< Vbus > bus,
    l4vbus\_device\_handle\_t dev ) [inline]
```

Construct a new vbus device using a device handle.

Specifying the special root bus device handle [L4VBUS_ROOT_BUS](#) forms the root device of the corresponding vbus, see [Vbus::root](#).

Parameters

| | |
|------------|--|
| <i>bus</i> | The vbus capability where this device is assigned. |
| <i>dev</i> | The device handle of the device. |

Definition at line 100 of file [vbus](#).

16.348.3 Member Function Documentation

16.348.3.1 bus_cap()

```
L4::Cap< Vbus > L4vbus::Device::bus_cap ( ) const [inline]
```

Access the [Vbus](#) capability of the underlying virtual bus.

Returns

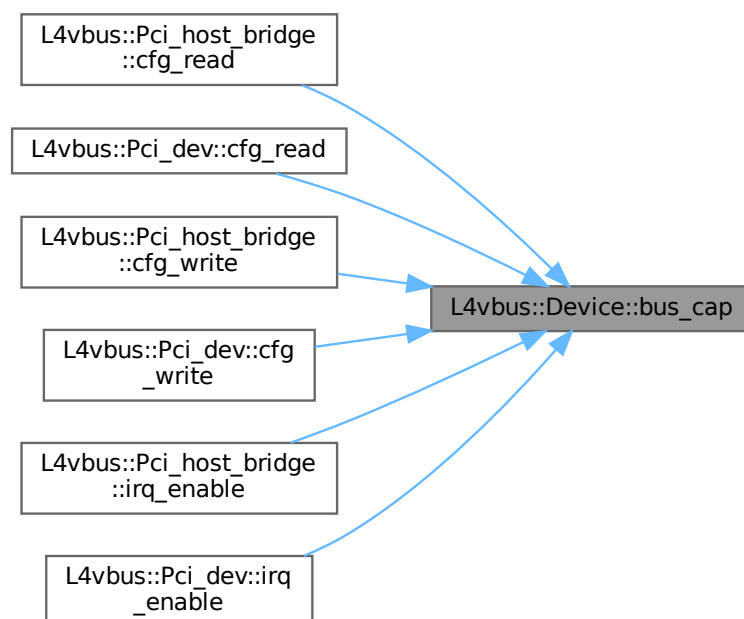

the capability to the underlying [Vbus](#).

Definition at line 107 of file [vbus](#).

References [_bus](#).

Referenced by [L4vbus::Pci_host_bridge::cfg_read\(\)](#), [L4vbus::Pci_dev::cfg_read\(\)](#), [L4vbus::Pci_host_bridge::cfg_write\(\)](#), [L4vbus::Pci_dev::cfg_write\(\)](#), [L4vbus::Pci_host_bridge::irq_enable\(\)](#), and [L4vbus::Pci_dev::irq_enable\(\)](#).

Here is the caller graph for this function:

16.348.3.2 dev_handle()

```
l4vbus_device_handle_t L4vbus::Device::dev_handle ( ) const [inline]
```

Access the device handle of this device.

Returns

the device handle for this device.

The device handle is used to directly address the device on its virtual bus.

Definition at line 116 of file [vbus](#).

References [_dev](#).

16.348.3.3 device()

```
int L4vbus::Device::device (
    l4vbus_device_t * devinfo ) const [inline]
```

Obtain detailed information about a [Vbus](#) device.

Parameters

| | | |
|-----|----------------|---|
| out | <i>devinfo</i> | Information structure which contains details about the device. The pointer might be NULL. |
|-----|----------------|---|

Return values

| | |
|------------|---|
| 0 | Success. |
| -L4_ENODEV | No device with the given device handle <i>dev</i> could be found. |

Definition at line 189 of file [vbus](#).

References [_bus](#), [_dev](#), and [l4vbus_get_device\(\)](#).

Here is the call graph for this function:

16.348.3.4 device_by_hid()

```
int L4vbus::Device::device_by_hid (
    Device * child,
    char const * hid,
    int depth = L4VBUS_MAX_DEPTH,
    l4vbus_device_t * devinfo = 0 ) const [inline]
```

Find a device by the hardware interface identifier (HID).

This function searches the vbus for a device with the given HID and returns a handle to the first matching device. The HID usually conforms to an ACPI HID or a Linux device tree compatible identifier.

It is possible to have multiple devices with the same HID on a vbus. In order to find all matching devices this function has to be called repeatedly with `child` pointing to the device found in the previous iteration. The iteration starts at `child` that might be any device node in the tree.

Parameters

| | | |
|---------|----------------|---|
| in, out | <i>child</i> | Handle of the device from where in the device tree the search should start. To start searching from the beginning <i>child</i> must be initialized using the default (L4VBUS_NULL). If a matching device is found, its handle is returned through this parameter. |
| | <i>hid</i> | HID of the device |
| | <i>depth</i> | Maximum depth for the recursive lookup |
| out | <i>devinfo</i> | Device information structure (might be NULL) |

Return values

| | |
|-------------------------|--|
| ≥ 0 | A device with the given HID was found. |
| <code>-L4_ENOENT</code> | No device with the given HID could be found on the vbus. |
| <code>-L4_EINVAL</code> | Invalid or no HID provided. |
| <code>-L4_ENODEV</code> | Function called on a non-existing device. |

Definition at line [148](#) of file [vbus](#).

References [_bus](#), [_dev](#), and [l4vbus_get_device_by_hid\(\)](#).

Here is the call graph for this function:

16.348.3.5 get_resource()

```
int L4vbus::Device::get_resource (
    unsigned res_idx,
    l4vbus_resource_t * res ) const [inline]
```

Obtain the resource description of an individual device resource.

Parameters

| | | |
|-----|----------------|---|
| | <i>res_idx</i> | Index of the resource for which the resource description should be returned. The total number of resources for a device is available in the l4vbus_device_t structure that is returned by L4vbus::Device::device_by_hid() and L4vbus::Device::next_device() . |
| out | <i>res</i> | Descriptor of the resource. |

This function returns the resource descriptor of an individual device resource selected by the `res_idx` parameter.

Return values

| | |
|-------------------|---|
| <i>0</i> | Success. |
| <i>-L4_ENOENT</i> | Invalid resource index <code>res_idx</code> . |

Definition at line 209 of file [vbus](#).

References [_bus](#), [_dev](#), and [l4vbus_get_resource\(\)](#).

Here is the call graph for this function:

16.348.3.6 is_compatible()

```
int L4vbus::Device::is_compatible (
    char const * cid ) const [inline]
```

Check if the given device has a compatibility ID (CID) or HID that matches *cid*.

Parameters

| | |
|------------|------------------------------|
| <i>cid</i> | the compatibility ID to test |
|------------|------------------------------|

Returns

1 when the given ID (*cid*) matches this device, 0 when the given ID does not match, <0 on error.

Definition at line 223 of file [vbus](#).

References [_bus](#), [_dev](#), and [l4vbus_is_compatible\(\)](#).

Here is the call graph for this function:

**16.348.3.7 next_device()**

```

int L4vbus::Device::next_device (
    Device * child,
    int depth = L4VBUS_MAX_DEPTH,
    l4vbus_device_t * devinfo = 0 ) const [inline]
  
```

Find next child following `child`.

Parameters

| | | |
|---------|----------------|--|
| in, out | <i>child</i> | Handle of the device that precedes the device that shall be returned. To start from the beginning, <i>child</i> must be initialized with <code>L4VBUS_NULL</code> (Device::Device). If a device is found, its handle is returned through this parameter. |
| | <i>depth</i> | Depth to look for |
| out | <i>devinfo</i> | Device information (might be NULL) |

Returns

0 on success, else failure

Definition at line 171 of file [vbus](#).

References [_bus](#), [_dev](#), and [l4vbus_get_next_device\(\)](#).

Here is the call graph for this function:

16.348.3.8 `operator!=()`

```
bool L4vbus::Device::operator!= (
    Device const & o ) const [inline]
```

Test if two [Vbus](#) devices are not the same.

Returns

true if the two devices are different, false else.

Definition at line [239](#) of file [vbus](#).

References [_bus](#), and [_dev](#).

16.348.3.9 `operator==()`

```
bool L4vbus::Device::operator== (
    Device const & o ) const [inline]
```

Test if two devices are the same [Vbus](#) device.

Returns

true if the two devices are the same, false else.

Definition at line [230](#) of file [vbus](#).

References [_bus](#), and [_dev](#).

16.349.1 Detailed Description

A [Gpio_module](#) groups multiple GPIO pins together.

Definition at line 133 of file [vbus_gpio](#).

16.349.2 Member Function Documentation

16.349.2.1 config_pad()

```
int L4vbus::Gpio_module::config_pad (
    Pin_slice const & mask,
    unsigned func,
    unsigned value ) const [inline]
```

Hardware specific configuration function for multiple GPIO pins.

Parameters

| | |
|--------------|--|
| <i>mask</i> | Mask of GPIO pins to configure. A bit set to 1 configures this pin. A maximum of 32 pins can be configured at once. The real number depends on the hardware and the driver implementation. |
| <i>func</i> | Hardware specific configuration register, usually offset to the GPIO chip's base address. |
| <i>value</i> | Value which is written into the hardware specific configuration register for the specified pins |

Returns

0 if OK, error code otherwise

Definition at line 185 of file [vbus_gpio](#).

References [L4vbus::Device::_bus](#), [L4vbus::Device::_dev](#), and [l4vbus_gpio_multi_config_pad\(\)](#).

Here is the call graph for this function:

16.349.2.2 get()

```
int L4vbus::Gpio_module::get (
    unsigned offset,
    unsigned * data ) const [inline]
```

Read values of multiple GPIO pins at once.

Parameters

| | | |
|-----|---------------|---|
| | <i>offset</i> | Pin corresponding to the LSB in <i>data</i> . Note: allowed may be hardware specific. |
| out | <i>data</i> | Each bit returns the value (0 or 1) for the corresponding GPIO pin. The value of pins that are not accessible is undefined. |

Returns

0 if OK, error code otherwise

Definition at line 201 of file [vbus_gpio](#).

References [L4vbus::Device::_bus](#), [L4vbus::Device::_dev](#), and [l4vbus_gpio_multi_get\(\)](#).

Here is the call graph for this function:

16.349.2.3 pin()

```
Gpio_pin L4vbus::Gpio_module::pin (  
    unsigned pin ) const [inline]
```

Get [Gpio_pin](#) for a specific pin of this [Gpio_module](#).

Parameters

| | |
|------------|--|
| <i>pin</i> | GPIO pin number to get Gpio_pin for. |
|------------|--|

Returns

[Gpio_pin](#)

Definition at line 229 of file [vbus_gpio](#).

References [pin\(\)](#).

Referenced by [pin\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.349.2.4 set()

```
int L4vbus::Gpio_module::set (
    Pin_slice const & mask,
    unsigned data ) [inline]
```

Set multiple GPIO output pins at once.

Parameters

| | |
|-------------|--|
| <i>mask</i> | Mask of GPIO pins to set. A bit set to 1 selects this pin. A maximum of 32 pins can be set at once. The real number depends on the hardware and the driver implementation. |
| <i>data</i> | Each bit corresponds to the GPIO pin in <i>mask</i> . The value of each bit is written to the GPIO pin if its bit in <i>mask</i> is set. |

Returns

0 if OK, error code otherwise

Definition at line 217 of file `vbus_gpio`.

References `L4vbus::Device::_bus`, `L4vbus::Device::_dev`, and `l4vbus_gpio_multi_set()`.

Here is the call graph for this function:

16.349.2.5 setup()

```

int L4vbus::Gpio_module::setup (
    Pin_slice const & mask,
    unsigned mode,
    unsigned value ) const [inline]
  
```

Configure function of multiple GPIO pins at once.

Parameters

| | |
|--------------|--|
| <i>mask</i> | Mask of GPIO pins to configure. A bit set to 1 configures this pin. A maximum of 32 pins can be configured at once. The real number depends on the hardware and the driver implementation. |
| <i>mode</i> | GPIO function, see L4vbus_gpio_generic_func for generic functions. Hardware specific functions must be provided in the lower 8 bits. |
| <i>value</i> | Optional value to set the GPIO pins to if they are configured as output pins |

Returns

0 if OK, error code otherwise

Definition at line 166 of file [vbus_gpio](#).

References [L4vbus::Device::_bus](#), [L4vbus::Device::_dev](#), and [l4vbus_gpio_multi_setup\(\)](#).

    unsigned value ) const [inline]
```

Hardware specific configuration function.

Parameters

| | |
|--------------|--|
| <i>func</i> | Hardware specific configuration register, usually offset to the GPIO chip's base address |
| <i>value</i> | Value which is written into the hardware specific configuration register for the specified pin |

Returns

0 if OK, error code otherwise

Definition at line 89 of file [vbus_gpio](#).

References [L4vbus::Device::_bus](#), [L4vbus::Device::_dev](#), and [l4vbus_gpio_config_pad\(\)](#).

Here is the call graph for this function:

16.351.2.3 config_pull()

```
int L4vbus::Gpio_pin::config_pull (
    unsigned mode ) const [inline]
```

Generic function to set pull up/down mode.

Parameters

| | |
|-------------|---|
| <i>mode</i> | mode for pull up/down resistors, see L4vbus_gpio_pull_modes |
|-------------|---|

Returns

0 if OK, error code otherwise

Definition at line 75 of file [vbus_gpio](#).

References [L4vbus::Device::_bus](#), [L4vbus::Device::_dev](#), and [l4vbus_gpio_config_pull\(\)](#).

Here is the call graph for this function:

16.351.2.4 `get()`

```
int L4vbus::Gpio_pin::get ( ) const [inline]
```

Read value of GPIO input pin.

Returns

Value of GPIO pin (usually 0 or 1), negative error code otherwise.

Definition at line 38 of file [vbus_gpio](#).

References [L4vbus::Device::_bus](#), [L4vbus::Device::_dev](#), and [l4vbus_gpio_get\(\)](#).

Here is the call graph for this function:

16.351.2.5 `pin()`

```
unsigned L4vbus::Gpio_pin::pin ( ) const [inline]
```

Get pin number.

Returns

GPIO pin number

Definition at line 122 of file [vbus_gpio](#).

16.351.2.6 `set()`

```
int L4vbus::Gpio_pin::set (
    int value ) const [inline]
```

Set GPIO output pin.

Parameters

| | |
|--------------|---|
| <i>value</i> | Value to write to the GPIO pin (usually 0 or 1) |
|--------------|---|

Returns

0 if OK, error code otherwise

Definition at line 49 of file [vbus_gpio](#).

References [L4vbus::Device::_bus](#), [L4vbus::Device::_dev](#), and [l4vbus_gpio_set\(\)](#).

Here is the call graph for this function:

**16.351.2.7 setup()**

```
int L4vbus::Gpio_pin::setup (
    unsigned mode,
    unsigned value ) const [inline]
```

Configure the function of a GPIO pin.

Parameters

| | |
|--------------|--|
| <i>mode</i> | GPIO function, see L4vbus_gpio_generic_func for generic functions. Hardware specific functions must be provided in the lower 8 bits. |
| <i>value</i> | Optional value to set the GPIO pin to if it is configured as an output pin |

Returns

0 if OK, error code otherwise

Definition at line 64 of file [vbus_gpio](#).

References [L4vbus::Device::_bus](#), [L4vbus::Device::_dev](#), and [l4vbus_gpio_setup\(\)](#).

Here is the call graph for this function:

16.351.2.8 to_irq()

```
int L4vbus::Gpio_pin::to_irq ( ) const [inline]
```

Create IRQ for GPIO pin.

Returns

IRQ number if OK, negative error code otherwise

Definition at line 112 of file [vbus_gpio](#).

References [L4vbus::Device::_bus](#), [L4vbus::Device::_dev](#), and [l4vbus_gpio_to_irq\(\)](#).

Here is the call graph for this function:

The documentation for this class was generated from the following file:

16.352 L4vbus::lcu Class Reference

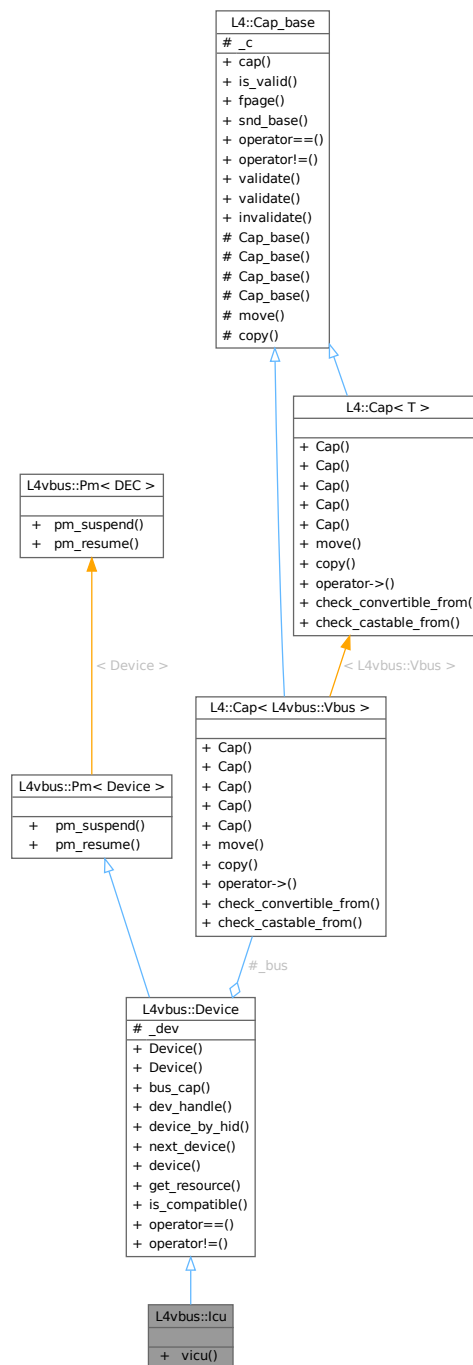

[Vbus](#) Interrupt controller API.

```
#include <vbus>
```

Inheritance diagram for L4vbus::lcu:

Collaboration diagram for L4vbus::lcu:

Public Types

- enum `Src_types` { `Src_dev_handle` = `L4VBUS_ICU_SRC_DEV_HANDLE` }
- Flags that can be used with the ICU on a vbus device.*

Public Member Functions

- int `vicu` (L4::Cap< L4::lcu > icu) const

Request an [L4::Icu](#) capability for this [Vbus](#)'s virtual ICU.

Public Member Functions inherited from [L4vbus::Device](#)

- [Device](#) ()
Construct a new vbus device using the NULL device [L4VBUS_NULL](#).
- [Device](#) ([L4::Cap](#)< [Vbus](#) > bus, [l4vbus_device_handle_t](#) dev)
Construct a new vbus device using a device handle.
- [L4::Cap](#)< [Vbus](#) > [bus_cap](#) () const
Access the [Vbus](#) capability of the underlying virtual bus.
- [l4vbus_device_handle_t](#) [dev_handle](#) () const
Access the device handle of this device.
- int [device_by_hid](#) ([Device](#) *child, char const *hid, int depth=L4VBUS_MAX_DEPTH, [l4vbus_device_t](#) *devinfo=0) const
Find a device by the hardware interface identifier (HID).
- int [next_device](#) ([Device](#) *child, int depth=L4VBUS_MAX_DEPTH, [l4vbus_device_t](#) *devinfo=0) const
Find next child following [child](#).
- int [device](#) ([l4vbus_device_t](#) *devinfo) const
Obtain detailed information about a [Vbus](#) device.
- int [get_resource](#) (unsigned res_idx, [l4vbus_resource_t](#) *res) const
Obtain the resource description of an individual device resource.
- int [is_compatible](#) (char const *cid) const
Check if the given device has a compatibility ID (CID) or HID that matches [cid](#).
- bool [operator==](#) ([Device](#) const &o) const
Test if two devices are the same [Vbus](#) device.
- bool [operator!=](#) ([Device](#) const &o) const
Test if two [Vbus](#) devices are not the same.

Public Member Functions inherited from [L4vbus::Pm](#)< [Device](#) >

- int [pm_suspend](#) () const
Suspend the device.
- int [pm_resume](#) () const
Resume the device.

Additional Inherited Members

Protected Attributes inherited from [L4vbus::Device](#)

- [L4::Cap](#)< [Vbus](#) > [_bus](#)
The [Vbus](#) capability where this device is located on.
- [l4vbus_device_handle_t](#) [_dev](#)
The device handle for this device.

16.352.1 Detailed Description

[Vbus](#) Interrupt controller API.

Every [Vbus](#) contains a virtual interrupt control unit that manages the IRQs of the devices on the bus. This class provides access to a capability to an [L4::Icu](#) object which can then be used to interface with the IRQs.

See also

[L4::Icu](#)

Definition at line 260 of file [vbus](#).

16.352.2 Member Enumeration Documentation

16.352.2.1 Src_types

```
enum L4vbus::Icu::Src_types
```

Flags that can be used with the ICU on a vbus device.

Enumerator

| | |
|----------------|---|
| Src_dev_handle | Flag to denote that the value should be interpreted as a device handle. This flag may be used in the <code>source</code> parameter in L4::Icu::msi_info() to denote that the ICU should interpret the source ID as a device handle. |
|----------------|---|

Definition at line 264 of file [vbus](#).

16.352.3 Member Function Documentation

16.352.3.1 vicu()

```
int L4vbus::Icu::vicu (
    L4::Cap< L4::Icu > icu ) const [inline]
```

Request an [L4::Icu](#) capability for this [Vbus](#)'s virtual ICU.

Parameters

| | | |
|-----|------------|---|
| out | <i>icu</i> | Capability slot where the L4::Icu capability shall be stored. |
|-----|------------|---|

Return values

| | |
|------------------|------------|
| 0 | Success. |
| <i>otherwise</i> | IPC error. |

Definition at line 285 of file [vbus](#).

References [L4vbus::Device::_bus](#), [L4vbus::Device::_dev](#), [L4::Cap_base::cap\(\)](#), and [l4vbus_vicu_get_cap\(\)](#).

The documentation for this class was generated from the following file:

- `I4/vbus/vbus`

16.353 L4vbus::Pci_dev Class Reference

A PCI device.

```
#include <vbus_pci>
```

Inheritance diagram for L4vbus::Pci_dev:

Collaboration diagram for L4vbus::Pci_dev:

Public Member Functions

- `int cfg_read (l4_uint32_t reg, l4_uint32_t *value, l4_uint32_t width) const`
Read from the device's vPCI configuration space.
- `int cfg_write (l4_uint32_t reg, l4_uint32_t value, l4_uint32_t width) const`
Write to the device's vPCI configuration space.
- `int irq_enable (unsigned char *trigger, unsigned char *polarity) const`
Enable the device's PCI interrupt.

Public Member Functions inherited from L4vbus::Device

- **Device** ()
Construct a new vbus device using the NULL device `L4VBUS_NULL`.
- **Device** (L4::Cap< Vbus > bus, l4vbus_device_handle_t dev)
Construct a new vbus device using a device handle.
- **L4::Cap< Vbus > bus_cap** () const
Access the `Vbus` capability of the underlying virtual bus.
- **l4vbus_device_handle_t dev_handle** () const
Access the device handle of this device.
- **int device_by_hid** (Device *child, char const *hid, int depth=L4VBUS_MAX_DEPTH, l4vbus_device_t *devinfo=0) const
Find a device by the hardware interface identifier (HID).
- **int next_device** (Device *child, int depth=L4VBUS_MAX_DEPTH, l4vbus_device_t *devinfo=0) const
Find next child following `child`.
- **int device** (l4vbus_device_t *devinfo) const
Obtain detailed information about a `Vbus` device.
- **int get_resource** (unsigned res_idx, l4vbus_resource_t *res) const
Obtain the resource description of an individual device resource.
- **int is_compatible** (char const *cid) const
Check if the given device has a compatibility ID (CID) or HID that matches `cid`.
- **bool operator==** (Device const &o) const
Test if two devices are the same `Vbus` device.
- **bool operator!=** (Device const &o) const
Test if two `Vbus` devices are not the same.

Public Member Functions inherited from L4vbus::Pm< Device >

- **int pm_suspend** () const
Suspend the device.
- **int pm_resume** () const
Resume the device.

Additional Inherited Members

Protected Attributes inherited from L4vbus::Device

- **L4::Cap< Vbus > _bus**
The `Vbus` capability where this device is located on.
- **l4vbus_device_handle_t _dev**
The device handle for this device.

16.353.1 Detailed Description

A PCI device.

Definition at line 93 of file `vbus_pci`.

16.353.2 Member Function Documentation

16.353.2.1 `cfg_read()`

```
int L4vbus::Pci_dev::cfg_read (
    14_uint32_t reg,
    14_uint32_t * value,
    14_uint32_t width ) const [inline]
```

Read from the device's vPCI configuration space.

Parameters

| | | |
|-----|--------------|---|
| | <i>reg</i> | Register in configuration space to read |
| out | <i>value</i> | Value that has been read |
| | <i>width</i> | Width to read in bits (e.g. 8, 16, 32) |

Returns

0 on success, else failure

Definition at line 105 of file `vbus_pci`.

References `L4vbus::Device::_dev`, `L4vbus::Device::bus_cap()`, and `l4vbus_pcidev_cfg_read()`.

Here is the call graph for this function:

16.353.2.2 `cfg_write()`

```
int L4vbus::Pci_dev::cfg_write (
    14_uint32_t reg,
    14_uint32_t value,
    14_uint32_t width ) const [inline]
```

Write to the device's vPCI configuration space.

Parameters

| | |
|--------------|--|
| <i>reg</i> | Register in configuration space to write |
| <i>value</i> | Value to write |
| <i>width</i> | Width to write in bits (e.g. 8, 16, 32) |

Returns

0 on success, else failure

Definition at line 121 of file [vbus_pci](#).

References [L4vbus::Device::_dev](#), [L4vbus::Device::bus_cap\(\)](#), and [l4vbus_pcidev_cfg_write\(\)](#).

Here is the call graph for this function:

**16.353.2.3 irq_enable()**

```
int L4vbus::Pci_dev::irq_enable (
    unsigned char * trigger,
    unsigned char * polarity ) const [inline]
```

Enable the device's PCI interrupt.

Parameters

| | | |
|-----|-----------------|---------------------------------------|
| out | <i>trigger</i> | False if interrupt is level-triggered |
| out | <i>polarity</i> | True if interrupt is of low polarity |

Returns

On success: Interrupt line to be used, else failure

Definition at line 137 of file [vbus_pci](#).

References [L4vbus::Device::_dev](#), [L4vbus::Device::bus_cap\(\)](#), and [l4vbus_pcidev_irq_enable\(\)](#).

Here is the call graph for this function:

The documentation for this class was generated from the following file:

The device handle for this device.

16.354.1 Detailed Description

A Pci host bridge.

Definition at line 25 of file [vbus_pci](#).

16.354.2 Member Function Documentation

16.354.2.1 `cfg_read()`

```
int L4vbus::Pci_host_bridge::cfg_read (
    l4_uint32_t bus,
    l4_uint32_t devfn,
    l4_uint32_t reg,
    l4_uint32_t * value,
    l4_uint32_t width ) const [inline]
```

Read from the vPCI configuration space using the PCI root bridge.

Parameters

| | | |
|-----|--------------|--|
| | <i>bus</i> | Bus number |
| | <i>devfn</i> | Device id (upper 16bit) and function (lower 16bit) |
| | <i>reg</i> | Register in configuration space to read |
| out | <i>value</i> | Value that has been read |
| | <i>width</i> | Width to read in bits (e.g. 8, 16, 32) |

Returns

0 on success, else failure

Definition at line 39 of file [vbus_pci](#).

References [L4vbus::Device::_dev](#), [L4vbus::Device::bus_cap\(\)](#), and [l4vbus_pci_cfg_read\(\)](#).

    14_uint32_t devfn,
    int pin,
    unsigned char * trigger,
    unsigned char * polarity ) const [inline]
```

Enable PCI interrupt for a specific device using the PCI root bridge.

Parameters

| | | |
|-----|-----------------|---|
| | <i>bus</i> | Bus number |
| | <i>devfn</i> | Device id (upper 16bit) and function (lower 16bit) |
| | <i>pin</i> | Interrupt pin (normally as reported in configuration register INTR) |
| out | <i>trigger</i> | False if interrupt is level-triggered |
| out | <i>polarity</i> | True if interrupt is of low polarity |

Returns

On success: Interrupt line to be used, else failure

Definition at line 79 of file [vbus_pci](#).

Inheritance diagram for L4vbus::Pm< DEC >:

Collaboration diagram for L4vbus::Pm< DEC >:

Public Member Functions

- int [pm_suspend](#) () const
Suspend the device.
- int [pm_resume](#) () const
Resume the device.

16.355.1 Detailed Description

```
template<typename DEC>
class L4vbus::Pm< DEC >
```

Power-management API mixin.

Devices that inherit from this mixin provide an API to be suspended and resumed.

Definition at line 50 of file [vbus](#).

16.355.2 Member Function Documentation

16.355.2.1 pm_resume()

```
template<typename DEC >
int L4vbus::Pm< DEC >::pm_resume ( ) const [inline]
```

Resume the device.

Switches the device from low-power mode to normal operation and restores the saved state.

Return values

| | |
|---|----------|
| 0 | Success. |
|---|----------|

Definition at line 74 of file [vbus](#).

References [l4vbus_pm_resume\(\)](#).

Here is the call graph for this function:

16.355.2.2 pm_suspend()

```
template<typename DEC >
int L4vbus::Pm< DEC >::pm_suspend ( ) const [inline]
```

Suspend the device.

Saves the state of the device and puts it into a low-power mode.

Return values

| | |
|---|----------|
| 0 | Success. |
|---|----------|

Definition at line 63 of file [vbus](#).

References [l4vbus_pm_suspend\(\)](#).

16.356 L4vbus::Vbus Class Reference

The virtual bus ([Vbus](#)) interface.

```
#include <vbus>
```

Inheritance diagram for L4vbus::Vbus:

Collaboration diagram for L4vbus::Vbus:

Public Member Functions

- `int request_ioport (l4vbus_resource_t *res) const`
Request the given IO port resource from the bus.
- `int release_ioport (l4vbus_resource_t *res) const`
Release the given IO port resource from the bus.
- `Device root () const`

Get the root device of the device tree of this bus.

- int [assign_dma_domain](#) (unsigned domain_id, unsigned flags, [L4::Cap](#)< [L4Re::Dma_space](#) > dma_space) const

Bind or unbind an [L4Re::Dma_space](#) to a DMA domain.

- int [assign_dma_domain](#) (unsigned domain_id, unsigned flags, [L4::Cap](#)< [L4::Task](#) > dma_space) const

Bind or unbind a kernel [DMA space](#) to a DMA domain.

Public Member Functions inherited from [L4Re::Dataspace](#)

- long [map](#) (Offset offset, Flags flags, Map_addr local_addr, Map_addr min_addr, Map_addr max_addr, [L4::Cap](#)< [L4::Task](#) > dst=[L4::Cap](#)< [L4::Task](#) >::Invalid) const noexcept

Request a flexpage mapping from the dataspace.

- long [map_region](#) (Offset offset, Flags flags, Map_addr min_addr, Map_addr max_addr, [L4::Cap](#)< [L4::Task](#) > dst=[L4::Cap](#)< [L4::Task](#) >::Invalid) const noexcept

Map a part of a dataspace into a local memory area.

- long [clear](#) (Offset offset, Size size)

Clear parts of a dataspace.

- long [allocate](#) (Offset offset, Size size)

Allocate a range in the dataspace.

- long [copy_in](#) (Offset dst_offs, [L4::lpc::Cap](#)< [Dataspace](#) > src, Offset src_offs, Size size)

Copy contents from another dataspace.

- Size [size](#) () const noexcept

Get size of a dataspace.

- Flags [flags](#) () const noexcept

Get flags of the dataspace.

- long [info](#) ([Stats](#) *stats)

Get information on the dataspace.

- long [map_info](#) ([l4_addr_t](#) *start_addr, [l4_addr_t](#) *end_addr)

Get mapping range of dataspace.

Public Member Functions inherited from [L4::Kobject](#)

- [l4_msgtag_t](#) [dec_refcnt](#) ([l4_mword_t](#) diff, [l4_utcb_t](#) *utcb=[l4_utcb](#)())

Decrement the in kernel reference counter for the object.

Public Member Functions inherited from [L4Re::Inhibitor](#)

- long [acquire](#) ([l4_umword_t](#) id, [L4::lpc::String](#)<> reason)

Acquire a specific inhibitor lock.

- long [release](#) ([l4_umword_t](#) id)

Release a specific inhibitor lock.

- long [next_lock_info](#) (char *name, unsigned len, [l4_mword_t](#) current_id=-1, [l4_utcb_t](#) *utcb=[l4_utcb](#)())

Get information for the next available inhibitor lock.

Public Member Functions inherited from L4Re::Event

- long `get_buffer` (L4::lpc::Out< L4::Cap< Dataspace > > ds)
Get event signal buffer.
- long `get_num_streams` ()
Get number of event streams.
- long `get_stream_info` (int idx, Event_stream_info *info)
Get event stream infos.
- long `get_stream_info_for_id` (l4_umword_t stream_id, Event_stream_info *info)
Get event stream infos.
- long `get_axis_info` (l4_umword_t stream_id, unsigned naxes, unsigned const *axis, Event_absinfo *info) const noexcept
Get event stream axis infos.
- long `get_stream_state_for_id` (l4_umword_t stream_id, Event_stream_state *state)
Get event stream state.

Public Member Functions inherited from L4::Icu

- `l4_msgtag_t bind` (unsigned irqnum, L4::Cap< Triggerable > irq, l4_utcb_t *utcb=l4_utcb()) noexcept
Bind an interrupt line of an interrupt controller to an interrupt object.
- `l4_msgtag_t unbind` (unsigned irqnum, L4::Cap< Triggerable > irq, l4_utcb_t *utcb=l4_utcb()) noexcept
Remove binding of an interrupt line from the interrupt controller object.
- `l4_msgtag_t info` (l4_icu_info_t *info, l4_utcb_t *utcb=l4_utcb()) noexcept
Get information about the ICU features.
- `l4_msgtag_t msi_info` (l4_umword_t irqnum, l4_uint64_t source, l4_icu_msi_info_t *msi_info)
Get MSI info about IRQ.
- `l4_msgtag_t mask` (unsigned irqnum, l4_umword_t *label=0, l4_timeout_t to=L4_IPC_NEVER, l4_utcb_t *utcb=l4_utcb()) noexcept
Mask an IRQ line.
- `l4_msgtag_t set_mode` (unsigned irqnum, l4_umword_t mode, l4_utcb_t *utcb=l4_utcb()) noexcept
Set interrupt mode.

Public Member Functions inherited from L4::Irq_eoi

- `l4_msgtag_t unmask` (unsigned irqnum, l4_umword_t *label=0, l4_timeout_t to=L4_IPC_NEVER, l4_utcb_t *utcb=l4_utcb()) noexcept
Unmask the given interrupt line.

Additional Inherited Members

Public Types inherited from L4Re::Inhibitor

- enum { `Name_max` = 20 }

Protected Types inherited from**L4::Kobject_3t< Vbus, L4Re::Dataspace, L4Re::Inhibitor, L4Re::Event >**

Helper to check for protocol conflicts.

16.356.1 Detailed Description

The virtual bus ([Vbus](#)) interface.

See also

[L4Re Vbus API](#)

Definition at line [298](#) of file [vbus](#).

16.356.2 Member Function Documentation

16.356.2.1 `assign_dma_domain()` [1/2]

```
int L4vbus::Vbus::assign_dma_domain (
    unsigned domain_id,
    unsigned flags,
    L4::Cap< L4::Task > dma\_space ) const [inline]
```

Bind or unbind a kernel [DMA space](#) to a DMA domain.

Parameters

| | |
|------------------|---|
| <i>domain_id</i> | DMA domain ID (resource address of DMA domain found on the vBUS). If the value is ~0U the DMA space of the whole vBUS is used. |
| <i>flags</i> | A combination of L4vbus_dma_domain_assign_flags . |
| <i>dma_space</i> | The DMA space capability to bind or unbind, this must be a kernel DMA space (L4::Task created with <code>L4_PROTO_DMA_SPACE</code>) |

Return values

| | |
|-------------------------|---|
| <code>0</code> | Operation completed successfully. |
| <code>-L4_ENOENT</code> | The vbus does not support a global DMA domain or no DMA domain could be found. |
| <code>-L4_EINVAL</code> | Invalid argument used. |
| <code>-L4_EBUSY</code> | DMA domain is already active, this means another DMA space is already assigned. |

Definition at line 382 of file [vbus](#).

16.356.2.2 assign_dma_domain() [2/2]

```

int L4vbus::Vbus::assign_dma_domain (
    unsigned domain_id,
    unsigned flags,
    L4::Cap< L4Re::Dma_space > dma_space ) const [inline]

```

Bind or unbind an [L4Re::Dma_space](#) to a DMA domain.

Parameters

| | |
|------------------|--|
| <i>domain_id</i> | DMA domain ID (resource address of DMA domain found on the vBUS). If the value is ~0U the DMA space of the whole vBUS is used. |
| <i>flags</i> | A combination of L4vbus_dma_domain_assign_flags . |
| <i>dma_space</i> | The DMA space capability to bind or unbind, this must be an L4Re::Dma_space |

Return values

| | |
|-------------------------|---|
| <code>0</code> | Operation completed successfully. |
| <code>-L4_ENOENT</code> | The vbus does not support a global DMA domain or no DMA domain could be found. |
| <code>-L4_EINVAL</code> | Invalid argument used. |
| <code>-L4_EBUSY</code> | DMA domain is already active, this means another DMA space is already assigned. |

Here is the call graph for this function:

16.356.2.3 release_ioport()

```
int L4vbus::Vbus::release_ioport (
    l4vbus_resource_t * res ) const [inline]
```

Release the given IO port resource from the bus.

Parameters

| | | |
|----|-----|---|
| in | res | The IO port resource to be released from the bus. |
|----|-----|---|

Returns

≥ 0 on success, < 0 on error.

Definition at line 323 of file `vbus`.

References `l4vbus_release_ioport()`.

Here is the call graph for this function:

16.356.2.4 request_ioport()

```
int L4vbus::Vbus::request_ioport (
    l4vbus_resource_t * res ) const [inline]
```

Request the given IO port resource from the bus.

Parameters

| | | |
|-----------|------------|--|
| <i>in</i> | <i>res</i> | The IO port resource to be requested from the bus. |
|-----------|------------|--|

Return values

| | |
|------------|--------------------------------------|
| 0 | Success. |
| -L4_EINVAL | Resource is not an IO port resource. |
| -L4_ENOENT | No matching IO port resource found. |

Definition at line 311 of file [vbus](#).

References [l4vbus_request_ioport\(\)](#).

Here is the call graph for this function:

16.356.2.5 root()

```
Device L4vbus::Vbus::root ( ) const [inline]
```

Get the root device of the device tree of this bus.

The root device is usually the starting point for iterating the bus, see [Device::next_device](#).

Returns

A [Vbus](#) device representing the root of the device tree.

Definition at line 336 of file [vbus](#).

References [L4VBUS_ROOT_BUS](#).

The documentation for this class was generated from the following file:

- `l4/vbus/vbus`

16.357 l4vbus_device_t Struct Reference

Detailed information about a vbus device.

```
#include <vbus_types.h>
```

Collaboration diagram for l4vbus_device_t:

Data Fields

- [l4_uint32_t](#) **type**
Bitfield of supported sub-interfaces, see [l4vbus_iface_type_t](#).
- char **name** [L4VBUS_DEV_NAME_LEN]
Name.
- unsigned **num_resources**
Number of resources for this device.
- unsigned **flags**
Flags, see [l4vbus_device_flags_t](#).

16.357.1 Detailed Description

Detailed information about a vbus device.

Definition at line 68 of file [vbus_types.h](#).

The documentation for this struct was generated from the following file:

- [l4/vbus/vbus_types.h](#)

16.358 l4vbus_resource_t Struct Reference

Description of a single vbus resource.

```
#include <vbus_types.h>
```

Collaboration diagram for l4vbus_resource_t:

| l4vbus_resource_t | |
|-------------------|----------|
| + | type |
| + | flags |
| + | start |
| + | end |
| + | provider |
| + | id |
| | |

Data Fields

- [l4_uint16_t type](#)
Resource type, see [l4vbus_resource_type_t](#).
- [l4_uint16_t flags](#)
Flags.
- [l4vbus_paddr_t start](#)
Start of resource range.
- [l4vbus_paddr_t end](#)
End of resource range (inclusive)
- [l4vbus_device_handle_t provider](#)
Device handle of the provider of the resource.
- [l4_uint32_t id](#)
Resource ID (4 bytes), usually a 4 letter ASCII name is used.

16.358.1 Detailed Description

Description of a single vbus resource.

Definition at line 23 of file [vbus_types.h](#).

16.359 L4vcpu::State Class Reference

C++ implementation of state word in the vCPU area.

```
#include <vcpu>
```

Collaboration diagram for L4vcpu::State:

Public Member Functions

- [State](#) (unsigned v)
Initialize state.
- void [add](#) (unsigned bits) throw ()
Add flags.
- void [clear](#) (unsigned bits) throw ()
Clear flags.
- void [set](#) (unsigned v) throw ()
Set flags.

16.359.1 Detailed Description

C++ implementation of state word in the vCPU area.

Definition at line [24](#) of file [vcpu](#).

16.359.2 Constructor & Destructor Documentation

16.359.2.1 State()

```
L4vcpu::State::State (
    unsigned v ) [inline], [explicit]
```

Initialize state.

Parameters

| | |
|----------|----------------|
| <i>v</i> | Initial state. |
|----------|----------------|

Definition at line 34 of file [vcpu](#).

16.359.3 Member Function Documentation

16.359.3.1 add()

```
void L4vcpu::State::add (
    unsigned bits ) throw ( )    [inline]
```

Add flags.

Parameters

| | |
|-------------|--------------------------|
| <i>bits</i> | Bits to add to the word. |
|-------------|--------------------------|

Definition at line 41 of file [vcpu](#).

16.359.3.2 clear()

```
void L4vcpu::State::clear (
    unsigned bits ) throw ( )    [inline]
```

Clear flags.

Parameters

| | |
|-------------|----------------------------|
| <i>bits</i> | Bits to clear in the word. |
|-------------|----------------------------|

Definition at line 48 of file [vcpu](#).

16.359.3.3 set()

```
void L4vcpu::State::set (
    unsigned v ) throw ( )    [inline]
```

Set flags.

Parameters

| | |
|----------|---|
| <i>v</i> | Set the word to the value of <i>v</i> . |
|----------|---|

Definition at line 55 of file [vcpu](#).

The documentation for this class was generated from the following file:

- [l4/vcpu/vcpu](#)

16.360 L4vcpu::Vcpu Class Reference

C++ implementation of the vCPU save state area.

```
#include <vcpu>
```

Inheritance diagram for L4vcpu::Vcpu:

Collaboration diagram for L4vcpu::Vcpu:

Public Member Functions

- void **irq_disable** () throw ()
Disable the vCPU for event delivery.
- unsigned **irq_disable_save** () throw ()
Disable the vCPU for event delivery and return previous state.
- **State * state** () throw ()

- Get state word.*

 - [State state](#) () const throw ()

Get state word.
- [State * saved_state](#) () throw ()

Get saved_state word.
- [State saved_state](#) () const throw ()

Get saved_state word.
- [l4_uint16_t sticky_flags](#) () const throw ()

Get sticky flags.
- void [irq_enable](#) ([l4_utcb_t](#) *utcb, [l4vcpu_event_hndl_t](#) do_event_work_cb, [l4vcpu_setup_ipc_t](#) setup_ipc) throw ()

Enable the vCPU for event delivery.
- void [irq_restore](#) (unsigned s, [l4_utcb_t](#) *utcb, [l4vcpu_event_hndl_t](#) do_event_work_cb, [l4vcpu_setup_ipc_t](#) setup_ipc) throw ()

Restore a previously saved IRQ/event state.
- void [wait_for_event](#) ([l4_utcb_t](#) *utcb, [l4vcpu_event_hndl_t](#) do_event_work_cb, [l4vcpu_setup_ipc_t](#) setup_ipc) throw ()

Wait for event.
- void [task](#) ([L4::Cap](#)< [L4::Task](#) > const task=[L4::Cap](#)< [L4::Task](#) >::Invalid) throw ()

Set the task of the vCPU.
- int [is_page_fault_entry](#) () const

Return whether the entry reason was a page fault.
- int [is_irq_entry](#) () const

Return whether the entry reason was an IRQ/IPC message.
- [l4_vcpu_regs_t](#) * r () throw ()

Return pointer to register state.
- [l4_vcpu_regs_t](#) const * r () const throw ()

Return pointer to register state.
- [l4_vcpu_ipc_regs_t](#) * i () throw ()

Return pointer to IPC state.
- [l4_vcpu_ipc_regs_t](#) const * i () const throw ()

Return pointer to IPC state.
- void [entry_sp](#) ([l4_umword_t](#) sp)

Set vCPU entry stack pointer.
- void [entry_ip](#) ([l4_umword_t](#) ip)

Set vCPU entry instruction pointer.
- void [print_state](#) (const char *prefix="") const throw ()

Print the state of the vCPU.

Static Public Member Functions

- static int [ext_alloc](#) ([Vcpu](#) **vcpu, [l4_addr_t](#) *ext_state, [L4::Cap](#)< [L4::Task](#) > task=[L4Re::Env::env](#)() ->task(), [L4::Cap](#)< [L4Re::Rm](#) > rm=[L4Re::Env::env](#)() ->rm()) throw ()

Allocate state area for an extended vCPU.
- static [Vcpu](#) * [cast](#) (void *x) throw ()

Cast a void pointer to a class pointer.
- static [Vcpu](#) * [cast](#) ([l4_addr_t](#) x) throw ()

Cast an address to a class pointer.

16.360.1 Detailed Description

C++ implementation of the vCPU save state area.

Definition at line 65 of file [vcpu](#).

16.360.2 Member Function Documentation

16.360.2.1 `cast()` [1/2]

```
static Vcpu * L4vcpu::Vcpu::cast (
    l4\_addr\_t x ) throw ( )    [inline], [static]
```

Cast an address to a class pointer.

Parameters

| | |
|----------------|----------|
| <code>x</code> | Pointer. |
|----------------|----------|

Returns

Pointer to [Vcpu](#) class.

Definition at line 269 of file [vcpu](#).

16.360.2.2 `cast()` [2/2]

```
static Vcpu * L4vcpu::Vcpu::cast (
    void * x ) throw ( )    [inline], [static]
```

Cast a void pointer to a class pointer.

Parameters

| | |
|----------------|----------|
| <code>x</code> | Pointer. |
|----------------|----------|

Returns

Pointer to [Vcpu](#) class.

Definition at line 259 of file [vcpu](#).

16.360.2.3 `entry_ip()`

```
void L4vcpu::Vcpu::entry_ip (
    l4\_umword\_t ip )    [inline]
```

Set vCPU entry instruction pointer.

Parameters

| | |
|-----------|-------------------------------------|
| <i>ip</i> | Instruction pointer address to set. |
|-----------|-------------------------------------|

Definition at line 232 of file [vcpu](#).

References [l4_vcpu_state_t::entry_ip](#).

16.360.2.4 entry_sp()

```
void L4vcpu::Vcpu::entry_sp (
    l4_umword_t sp ) [inline]
```

Set vCPU entry stack pointer.

Parameters

| | |
|-----------|-------------------------------|
| <i>sp</i> | Stack pointer address to set. |
|-----------|-------------------------------|

Note

The value is only used when entering from a user-task.

Definition at line 225 of file [vcpu](#).

References [l4_vcpu_state_t::entry_sp](#).

16.360.2.5 ext_alloc()

```
static int L4vcpu::Vcpu::ext_alloc (
    Vcpu ** vcpu,
    l4_addr_t * ext_state,
    L4::Cap< L4::Task > task = L4Re::Env::env() ->task(),
    L4::Cap< L4Re::Rm > rm = L4Re::Env::env() ->rm() ) throw ( ) [static]
```

Allocate state area for an extended vCPU.

Parameters

| | | |
|-----|------------------|---|
| out | <i>vcpu</i> | Allocated vcpu-state area. |
| out | <i>ext_state</i> | Allocated extended vcpu-state area. |
| | <i>task</i> | Task to use for allocation, defaults to own task. |
| | <i>rm</i> | Region manager to use for allocation defaults to standard region manager. |

Returns

0 for success, error code otherwise

References [task\(\)](#).

Here is the call graph for this function:

16.360.2.6 `i()` [1/2]

```
l4_vcpu_ipc_regs_t * L4vcpu::Vcpu::i ( ) throw ( ) [inline]
```

Return pointer to IPC state.

Returns

Pointer to IPC state.

Definition at line 209 of file `vcpu`.

References `l4_vcpu_state_t::i`.

16.360.2.7 `i()` [2/2]

```
l4_vcpu_ipc_regs_t const * L4vcpu::Vcpu::i ( ) const throw ( ) [inline]
```

Return pointer to IPC state.

Returns

Pointer to IPC state.

Definition at line 216 of file `vcpu`.

References `l4_vcpu_state_t::i`.

16.360.2.8 `irq_disable_save()`

```
unsigned L4vcpu::Vcpu::irq_disable_save ( ) throw ( ) [inline]
```

Disable the vCPU for event delivery and return previous state.

Returns

IRQ state before disabling IRQs.

Definition at line 78 of file `vcpu`.

References `l4vcpu_irq_disable_save()`.

Here is the call graph for this function:

16.360.2.9 irq_enable()

```
void L4vcpu::Vcpu::irq_enable (
    l4_utcb_t * utcb,
    l4vcpu_event_hndl_t do_event_work_cb,
    l4vcpu_setup_ipc_t setup_ipc ) throw ( )    [inline]
```

Enable the vCPU for event delivery.

Parameters

| | |
|-------------------------|--|
| <i>utcb</i> | The UTCB to use. |
| <i>do_event_work_cb</i> | Call-back function that is called in case an event (such as an interrupt) is pending. |
| <i>setup_ipc</i> | Call-back function that is called before an IPC operation is called, and before event delivery is enabled. |

Definition at line 135 of file [vcpu](#).

References [l4vcpu_irq_enable\(\)](#).

Here is the call graph for this function:

16.360.2.10 irq_restore()

```
void L4vcpu::Vcpu::irq_restore (
    unsigned s,
    l4_utcb_t * utcb,
    l4vcpu_event_hndl_t do_event_work_cb,
    l4vcpu_setup_ipc_t setup_ipc ) throw ( )    [inline]
```

Restore a previously saved IRQ/event state.

Parameters

| | |
|-------------------------|--|
| <i>s</i> | IRQ state to be restored. |
| <i>utcb</i> | The UTCB to use. |
| <i>do_event_work_cb</i> | Call-back function that is called in case an event (such as an interrupt) is pending. |
| <i>setup_ipc</i> | Call-back function that is called before an IPC operation is called, and before event delivery is enabled. |

Definition at line 150 of file [vcpu](#).

References [l4vcpu_irq_restore\(\)](#).

Here is the call graph for this function:

16.360.2.11 is_irq_entry()

```
int L4vcpu::Vcpu::is_irq_entry ( ) const [inline]
```

Return whether the entry reason was an IRQ/IPC message.

return 0 if not, !=0 otherwise.

Definition at line 188 of file [vcpu](#).

References [l4vcpu_is_irq_entry\(\)](#).

Here is the call graph for this function:

16.360.2.12 is_page_fault_entry()

```
int L4vcpu::Vcpu::is_page_fault_entry ( ) const [inline]
```

Return whether the entry reason was a page fault.

return 0 if not, !=0 otherwise.

Definition at line 181 of file [vcpu](#).

References [l4vcpu_is_page_fault_entry\(\)](#).

Here is the call graph for this function:

16.360.2.13 `r()` [1/2]

```
l4_vcpu_regs_t * L4vcpu::Vcpu::r ( ) throw ( ) [inline]
```

Return pointer to register state.

Returns

Pointer to register state.

Definition at line 195 of file `vcpu`.

References `l4_vcpu_state_t::r`.

16.360.2.14 `r()` [2/2]

```
l4_vcpu_regs_t const * L4vcpu::Vcpu::r ( ) const throw ( ) [inline]
```

Return pointer to register state.

Returns

Pointer to register state.

Definition at line 202 of file `vcpu`.

References `l4_vcpu_state_t::r`.

16.360.2.15 `saved_state()` [1/2]

```
State * L4vcpu::Vcpu::saved_state ( ) throw ( ) [inline]
```

Get `saved_state` word.

Returns

Pointer to `saved_state` word in the vCPU

Definition at line 106 of file `vcpu`.

References `l4_vcpu_state_t::saved_state`.

16.360.2.16 `saved_state()` [2/2]

```
State L4vcpu::Vcpu::saved_state ( ) const throw ( ) [inline]
```

Get `saved_state` word.

Returns

Pointer to `saved_state` word in the vCPU

Definition at line 116 of file `vcpu`.

References `l4_vcpu_state_t::saved_state`.

16.360.2.17 state() [1/2]

```
State * L4vcpu::Vcpu::state ( ) throw ( ) [inline]
```

Get state word.

Returns

Pointer to state word in the vCPU

Definition at line 88 of file [vcpu](#).

References [l4_vcpu_state_t::state](#).

16.360.2.18 state() [2/2]

```
State L4vcpu::Vcpu::state ( ) const throw ( ) [inline]
```

Get state word.

Returns

Pointer to state word in the vCPU

Definition at line 99 of file [vcpu](#).

References [l4_vcpu_state_t::state](#).

16.360.2.19 task()

```
void L4vcpu::Vcpu::task (
    L4::Cap< L4::Task > const task = L4::Cap<L4::Task>::Invalid ) throw ( ) [inline]
```

Set the task of the vCPU.

Parameters

| | |
|-------------|--|
| <i>task</i> | Task to set, defaults to invalid task. |
|-------------|--|

Definition at line 174 of file [vcpu](#).

16.360.2.20 wait_for_event()

```

void L4vcpu::Vcpu::wait_for_event (
    l4_utcb_t * utcb,
    l4vcpu_event_hndl_t do_event_work_cb,
    l4vcpu_setup_ipc_t setup_ipc ) throw ( )    [inline]
  
```

Wait for event.

Parameters

| | |
|-------------------------|---|
| <i>utcb</i> | The UTCB to use. |
| <i>do_event_work_cb</i> | Call-back function that is called in case an event (such as an interrupt) is pending. |
| <i>setup_ipc</i> | Call-back function that is called before an IPC operation is called. |

Note that event delivery remains disabled after this function returns.

16.361 L4virtio::Device Class Reference

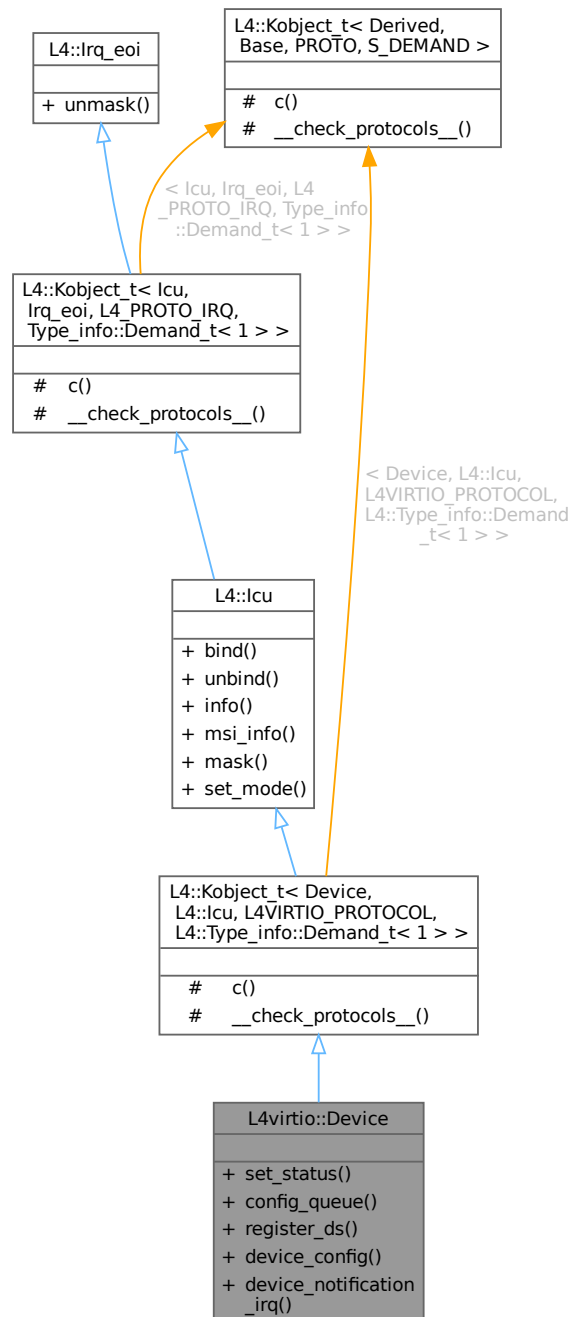

IPC interface for virtio over [L4](#) IPC.

```
#include <l4virtio>
```

Inheritance diagram for L4virtio::Device:

Collaboration diagram for L4virtio::Device:

Public Member Functions

- long `set_status` (unsigned status)
Write the VIRTIO status register.
- long `config_queue` (unsigned queue)
Trigger queue configuration of the given queue.

- `long register_ds (L4::lpc::Cap< L4Re::Dataspace > ds_cap, l4_uint64_t base, l4_umword_t offset, l4_umword_t size)`
Register a shared data space with VIRTIO host.
- `long device_config (L4::lpc::Out< L4::Cap< L4Re::Dataspace > > config_ds, l4_addr_t *ds_offset)`
Get the dataspace with the [L4virtio](#) configuration page.
- `long device_notification_irq (unsigned index, L4::lpc::Out< L4::Cap< L4::Triggerable > > irq)`
Get the notification interrupt corresponding to the given index.

Public Member Functions inherited from [L4::lcu](#)

- `l4_msgtag_t bind (unsigned irqnum, L4::Cap< Triggerable > irq, l4_utcb_t *utcb=l4_utcb()) noexcept`
Bind an interrupt line of an interrupt controller to an interrupt object.
- `l4_msgtag_t unbind (unsigned irqnum, L4::Cap< Triggerable > irq, l4_utcb_t *utcb=l4_utcb()) noexcept`
Remove binding of an interrupt line from the interrupt controller object.
- `l4_msgtag_t info (l4_icu_info_t *info, l4_utcb_t *utcb=l4_utcb()) noexcept`
Get information about the ICU features.
- `l4_msgtag_t msi_info (l4_umword_t irqnum, l4_uint64_t source, l4_icu_msi_info_t *msi_info)`
Get MSI info about IRQ.
- `l4_msgtag_t mask (unsigned irqnum, l4_umword_t *label=0, l4_timeout_t to=L4_IPC_NEVER, l4_utcb_t *utcb=l4_utcb()) noexcept`
Mask an IRQ line.
- `l4_msgtag_t set_mode (unsigned irqnum, l4_umword_t mode, l4_utcb_t *utcb=l4_utcb()) noexcept`
Set interrupt mode.

Public Member Functions inherited from [L4::lrq_eoi](#)

- `l4_msgtag_t unmask (unsigned irqnum, l4_umword_t *label=0, l4_timeout_t to=L4_IPC_NEVER, l4_utcb_t *utcb=l4_utcb()) noexcept`
Unmask the given interrupt line.

Additional Inherited Members

Protected Types inherited from

16.361.1 Detailed Description

IPC interface for virtio over [L4 IPC](#).

The [L4virtio](#) protocol is an adaption of the mmio virtio transport 1.0(4). This interface allows to exchange the necessary resources: device configuration page, notification interrupts and dataspace for payload.

Notification interrupts can be configured independently for changes to the configuration space and each queue through special L4virtio-specific `notify_index` fields in the config page and queue configuration. The interface distinguishes between device-to-driver and driver-to-device notification interrupts.

Device-to-driver interrupts are configured via the ICU interface. The device announces the maximum number of supported interrupts via `lcu::info()`. The driver can then bind interrupts using `lcu::bind()`.

Driver-to-device interrupts must be requested from the device through [device_notification_irq\(\)](#).

Definition at line 39 of file [l4virtio](#).

16.361.2 Member Function Documentation**16.361.2.1 config_queue()**

```
long L4virtio::Device::config_queue (
    unsigned queue )
```

Trigger queue configuration of the given queue.

Usually all queues are configured when the status is written to running. However, in some cases queues shall be disabled or enabled dynamically, in this case this function triggers a reconfiguration from the shared memory register of the queue config.

Parameters

| | |
|--------------|---|
| <i>queue</i> | Queue index for the queue to be configured. |
|--------------|---|

Return values

| | |
|-------------------|---|
| <i>0</i> | on success. |
| <i>-L4_EIO</i> | The queue's status is invalid. |
| <i>-L4_ERANGE</i> | The queue index exceeds the number of queues. |
| <i>-L4_EINVAL</i> | Otherwise. |

Referenced by [L4virtio::Driver::Device::config_queue\(\)](#).

Here is the caller graph for this function:

16.361.2.2 device_config()

```

long L4virtio::Device::device_config (
    L4::Ipc::Out< L4::Cap< L4Re::Dataspace > > config_ds,
    l4_addr_t * ds_offset )

```

Get the dataspace with the [L4virtio](#) configuration page.

Parameters

| | |
|------------------|---|
| <i>config_ds</i> | Capability for receiving the dataspace capability for the shared L4-VIRTIO config data space. |
| <i>ds_offset</i> | Offset into the dataspace where the device configuration structure starts. |

Referenced by [L4virtio::Driver::Device::driver_connect\(\)](#).

Here is the caller graph for this function:

16.361.2.3 device_notification_irq()

```
long L4virtio::Device::device_notification_irq (
    unsigned index,
    L4::Ipc::Out< L4::Cap< L4::Triggerable > > irq )
```

Get the notification interrupt corresponding to the given index.

Parameters

| | | |
|-----|--------------|----------------------------------|
| | <i>index</i> | Index of the interrupt. |
| out | <i>irq</i> | Triggerable for the given index. |

Return values

| | |
|------------------|---|
| <i>L4_EOK</i> | Success. |
| <i>L4_ENOSYS</i> | IRQ notification not supported by device. |
| <i><0</i> | Other error. |

An index is only guaranteed to return an IRQ object when the index is set in one of the device notify index fields. The device must return the same interrupt for a given index as long as the index is in use. If an index disappears as a result of a configuration change and then is reused later, the interrupt is not guaranteed to be the same.

Interrupts must always be rerequested after a device reset.

Referenced by [L4virtio::Driver::Device::driver_connect\(\)](#).

Here is the caller graph for this function:

16.361.2.4 register_ds()

```
long L4virtio::Device::register_ds (
    L4::Ipc::Cap< L4Re::Dataspace > ds_cap,
    l4_uint64_t base,
    l4_umword_t offset,
    l4_umword_t size )
```

Register a shared data space with VIRTIO host.

Parameters

| | |
|---------------|--|
| <i>ds_cap</i> | Dataspace capability to register. The lower 8 bits determine the rights mask with which the guest's rights are masked during the registration of the dataspace at the VIRTIO host. |
| <i>base</i> | VIRTIO guest physical start address of shared memory region |
| <i>offset</i> | Offset within the data space that is attached to the given <i>base</i> in the guest physical memory. |
| <i>size</i> | Size of the memory region in the guest |

Return values

| | |
|-------------------|--|
| <i>L4_EOK</i> | Operation successful. |
| <i>-L4_EINVAL</i> | The <i>ds_cap</i> capability is invalid, does not refer to a valid dataspace, is not a trusted dataspace if trusted dataspace validation is enabled, or <i>size</i> and <i>offset</i> specify an invalid region. |
| <i>-L4_ENOMEM</i> | The limit of dataspaces that can be registered has been reached or no capability slot could be allocated. |
| <i>-L4_ERANGE</i> | <i>offset</i> is larger than the size of the dataspace. |
| <i><0</i> | Any error returned by the dataspace when queried for information during setup or any error returned by the region manager from attaching the dataspace. |

Referenced by [L4virtio::Driver::Device::register_ds\(\)](#).

Here is the caller graph for this function:

16.361.2.5 `set_status()`

```
long L4virtio::Device::set_status (
    unsigned status )
```

Write the VIRTIO status register.

Parameters

| | |
|---------------|--|
| <i>status</i> | Status word to write to the VIRTIO status. |
|---------------|--|

Return values

| | |
|----------|-------------|
| <i>0</i> | on success. |
|----------|-------------|

Note

All other registers are accessed via shared memory.

Referenced by [L4virtio::Driver::Device::driver_acknowledge\(\)](#), and [L4virtio::Driver::Device::driver_connect\(\)](#).

Here is the caller graph for this function:

The documentation for this class was generated from the following file:

16.362 L4virtio::Driver::Block_device Class Reference

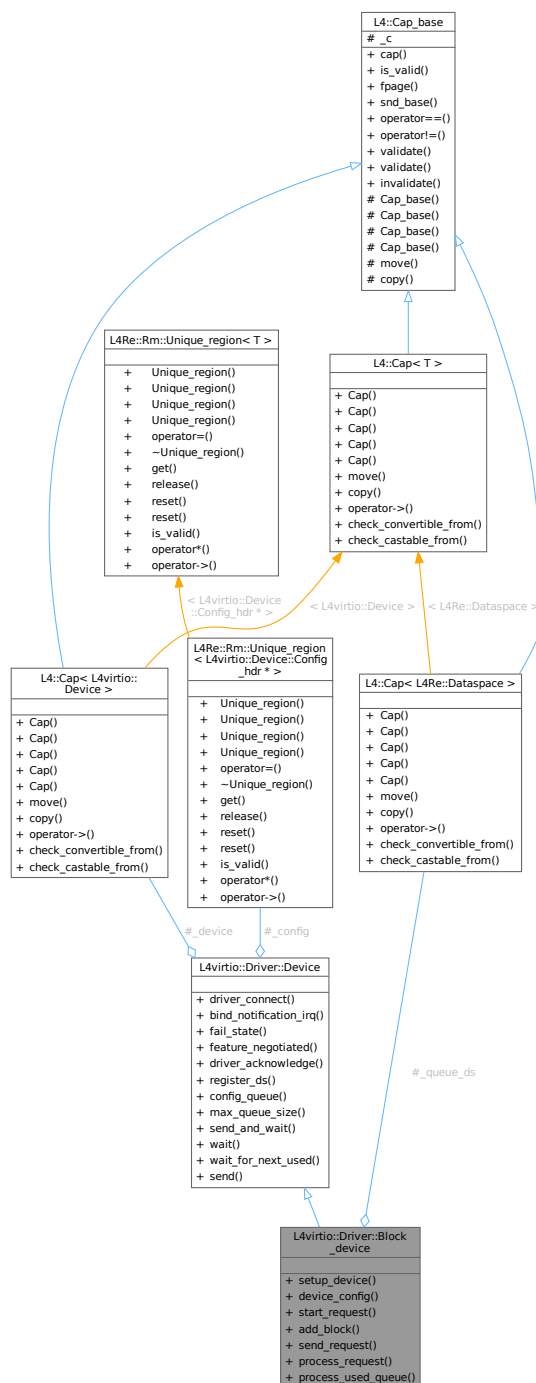

Simple class for accessing a virtio block device synchronously.

```
#include <virtio-block>
```

Inheritance diagram for L4virtio::Driver::Block_device:

Collaboration diagram for L4virtio::Driver::Block_device:

Data Structures

- class `Handle`
Handle to an ongoing request.

Public Member Functions

- void `setup_device` (`L4::Cap`< `L4virtio::Device` > `srvcap`, `l4_size_t` `usermem`, void `**userdata`, `Ptr`< void > `&user_devaddr`, `L4::Cap`< `L4Re::Dataspace` > `qds=L4::Cap`< `L4Re::Dataspace` >(), `l4_uint32_t` `fmask0=-1U`, `l4_uint32_t` `fmask1=-1U`)
Establish a connection to the device and set up shared memory.
- `l4virtio_block_config_t` const & `device_config` () const
Return a reference to the device configuration.
- `Handle` `start_request` (`l4_uint64_t` `sector`, `l4_uint32_t` type, `Callback` callback)
Start the setup of a new request.
- int `add_block` (`Handle` `handle`, `Ptr`< void > `addr`, `l4_uint32_t` `size`)
Add a data block to a request that has already been set up.
- int `send_request` (`Handle` `handle`)
Process request asynchronously.
- int `process_request` (`Handle` `handle`)
Process request synchronously.
- void `process_used_queue` ()
Process and free all items in the used queue.

Public Member Functions inherited from `L4virtio::Driver::Device`

- void `driver_connect` (`L4::Cap`< `L4virtio::Device` > `srvcap`, bool `manage_notify=true`)
Contacts the device and starts the initial handshake.
- int `bind_notification_irq` (unsigned index, `L4::Cap`< `L4::Triggerable` > `irq`) const
Register a triggerable to receive notifications from the device.
- bool `fail_state` () const
Return true if the device is in a fail state.
- bool `feature_negotiated` (unsigned int `feat`) const
Check if a particular feature bit was negotiated with the device.
- int `driver_acknowledge` ()
Finalize handshake with the device.
- int `register_ds` (`L4::Cap`< `L4Re::Dataspace` > `ds`, `l4_umword_t` `offset`, `l4_umword_t` `size`, `l4_uint64_t` `*devaddr`)
Share a dataspace with the device.
- int `config_queue` (int `num`, unsigned `size`, `l4_uint64_t` `desc_addr`, `l4_uint64_t` `avail_addr`, `l4_uint64_t` `used_↔addr`)
Send the virtqueue configuration to the device.
- int `max_queue_size` (int `num`) const
Maximum queue size allowed by the device.
- int `send_and_wait` (`Virtqueue` &`queue`, `l4_uint16_t` `descno`)
Send a request to the device and wait for it to be processed.
- int `wait` (int index) const
Wait for a notification from the device.
- int `wait_for_next_used` (`Virtqueue` &`queue`, `l4_uint32_t` `*len=nullptr`) const
Wait for the next item to arrive in the used queue and return it.
- void `send` (`Virtqueue` &`queue`, `l4_uint16_t` `descno`)
Send a request to the device.

16.362.1 Detailed Description

Simple class for accessing a virtio block device synchronously.

Definition at line 36 of file [virtio-block](#).

16.362.2 Member Function Documentation

16.362.2.1 add_block()

```
int L4virtio::Driver::Block_device::add_block (
    Handle handle,
    Ptr< void > addr,
    l4_uint32_t size ) [inline]
```

Add a data block to a request that has already been set up.

Parameters

| | |
|---------------|--|
| <i>handle</i> | Handle to request previously set up with start_request() . |
| <i>addr</i> | Address of data block in device address space. |
| <i>size</i> | Size of data block. |

Return values

| | |
|-------------------|--|
| <i>L4_OK</i> | Block was successfully added. |
| <i>-L4_EAGAIN</i> | No descriptors available. Try again later. |

Definition at line 229 of file [virtio-block](#).

References [L4virtio::Virtqueue::Desc::addr](#), [L4virtio::Driver::Virtqueue::alloc_descriptor\(\)](#), [L4virtio::Driver::Virtqueue::desc\(\)](#), [L4virtio::Virtqueue::Desc::flags](#), [L4_EAGAIN](#), [L4_EOK](#), [L4virtio::Virtqueue::Desc::len](#), [L4virtio::Virtqueue::Desc::Flags::next\(\)](#), [L4virtio::Virtqueue::Desc::next](#), [L4virtio::Virtqueue::Desc::Flags::raw](#), [l4virtio_block_header_t::type](#), and [L4virtio::Virtqueue::Desc::Fla](#)

Here is the call graph for this function:

16.362.2.2 process_request()

```
int L4virtio::Driver::Block_device::process_request (
    Handle handle ) [inline]
```

Process request synchronously.

Parameters

| | |
|---------------|---|
| <i>handle</i> | Handle to request to process. |
|---------------|---|

Return values

| | |
|-------------------|--|
| <i>L4_EOK</i> | Request processed successfully. |
| <i>-L4_EAGAIN</i> | No descriptors available. Try again later. |
| <i>-L4_EIO</i> | IO error during request processing. |
| <i>-L4_ENOSYS</i> | Unsupported request. |
| <i><0</i> | Another unspecified error occurred. |

Sends a request to the driver that was previously set up with [start_request\(\)](#) and [add_block\(\)](#) and wait for it to be executed.

Definition at line 306 of file [virtio-block](#).

References [L4virtio::Virtqueue::Desc::addr](#), [L4virtio::Driver::Virtqueue::alloc_descriptor\(\)](#), [L4virtio::Driver::Virtqueue::desc\(\)](#), [L4virtio::Virtqueue::Desc::flags](#), [L4_EAGAIN](#), [L4_EINVAL](#), [L4_EIO](#), [L4_ENOSYS](#), [L4_EOK](#), [L4VIRTIO_BLOCK_S_IOERR](#), [L4VIRTIO_BLOCK_S_OK](#), [L4VIRTIO_BLOCK_S_UNSUPP](#), [L4virtio::Virtqueue::Desc::len](#), [L4virtio::Virtqueue::Desc::Flags::next\(\)](#), [L4virtio::Virtqueue::Desc::next](#), [L4virtio::Virtqueue::Desc::Flags::raw](#), [L4virtio::Driver::Device::send_and_wait\(\)](#), and [L4virtio::Virtqueue::Desc::Flags::write\(\)](#).

Here is the call graph for this function:

16.362.2.3 process_used_queue()

```
void L4virtio::Driver::Block_device::process_used_queue ( ) [inline]
```

Process and free all items in the used queue.

If the request has a callback registered it is called after the item has been removed from the queue.

Definition at line 357 of file [virtio-block](#).

References [L4Re::chksys\(\)](#), [L4virtio::Driver::Virtqueue::find_next_used\(\)](#), [L4_ENOSYS](#), and [L4virtio::Virtqueue::num\(\)](#).

Here is the call graph for this function:

16.362.2.4 send_request()

```
int L4virtio::Driver::Block_device::send_request (
    Handle handle ) [inline]
```

Process request asynchronously.

Parameters

| | |
|---------------|---|
| <i>handle</i> | Handle to request to send to the device |
|---------------|---|

Return values

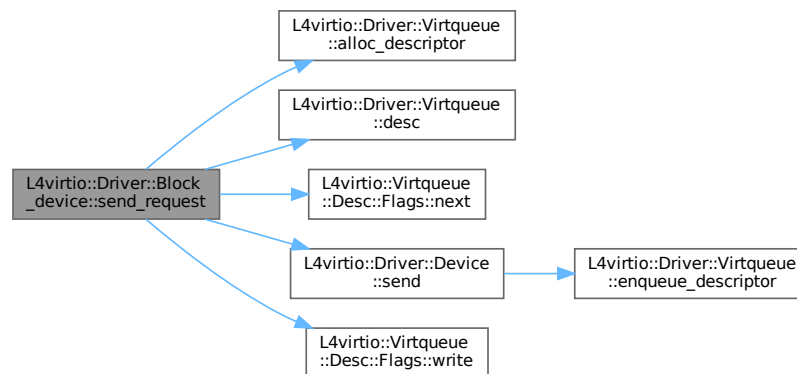

| | |
|-------------------------|--|
| <code>L4_OK</code> | Request was successfully scheduled. |
| <code>-L4_EAGAIN</code> | No descriptors available. Try again later. |

Sends a request to the driver that was previously set up with [start_request\(\)](#) and [add_block\(\)](#) and wait for it to be executed.

Definition at line 265 of file [virtio-block](#).

References [L4virtio::Virtqueue::Desc::addr](#), [L4virtio::Driver::Virtqueue::alloc_descriptor\(\)](#), [L4virtio::Driver::Virtqueue::desc\(\)](#), [L4virtio::Virtqueue::Desc::flags](#), [L4_EAGAIN](#), [L4_EOK](#), [L4virtio::Virtqueue::Desc::len](#), [L4virtio::Virtqueue::Desc::Flags::next\(\)](#), [L4virtio::Virtqueue::Desc::next](#), [L4virtio::Virtqueue::Desc::Flags::raw](#), [L4virtio::Driver::Device::send\(\)](#), and [L4virtio::Virtqueue::Desc::Flags::write\(\)](#).

Here is the call graph for this function:

16.362.2.5 setup_device()

```

void L4virtio::Driver::Block_device::setup_device (
    L4::Cap< L4virtio::Device > srvcap,
    l4_size_t usermem,
    void ** userdata,
    Ptr< void > & user_devaddr,
    L4::Cap< L4Re::Dataspace > qds = L4::Cap<L4Re::Dataspace>(),
    l4_uint32_t fmask0 = -1U,
    l4_uint32_t fmask1 = -1U ) [inline]

```

Establish a connection to the device and set up shared memory.

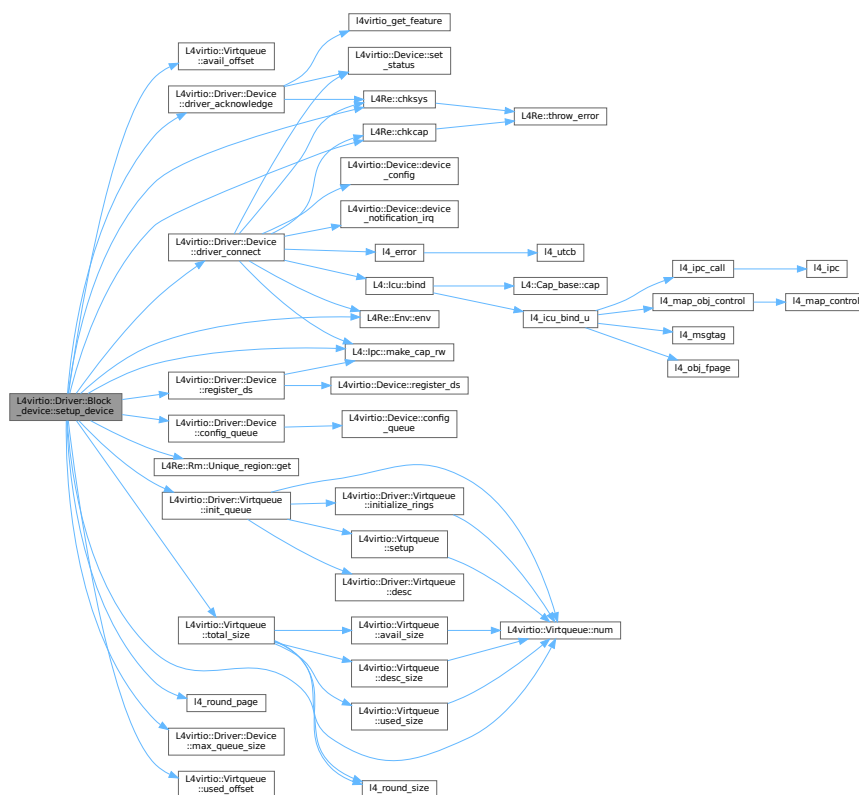

Parameters

| | | |
|-----|---------------------------|--|
| | <code>srvcap</code> | IPC capability of the channel to the server. |
| | <code>usermem</code> | Size of additional memory to share with device. |
| out | <code>userdata</code> | Pointer to the region of user-usable memory. |
| out | <code>user_devaddr</code> | Address of user-usable memory in device address space. |

| | | |
|--|---------------|---|
| | <i>qds</i> | External queue dataspace. If this capability is invalid, the function will attempt to allocate a dataspace on its own. Note that the external queue dataspace must be large enough. |
| | <i>fmask0</i> | Feature bits 0..31 that the driver supports. |
| | <i>fmask1</i> | Feature bits 32..63 that the driver supports. |

Definition at line 92 of file virtio-block.

Here is the call graph for this function:

16.362.2.6 start_request()

```
Handle L4virtio::Driver::Block_device::start_request (
    l4_uint64_t sector,
    l4_uint32_t type,
    Callback callback ) [inline]
```

Start the setup of a new request.

Parameters

| | |
|-----------------|--|
| <i>sector</i> | First sector to write to/read from. |
| <i>type</i> | Request type. |
| <i>callback</i> | Function to call, when the request is finished. May be 0 for synchronous requests. |

Definition at line 191 of file [virtio-block](#).

References [L4virtio::Virtqueue::Desc::addr](#), [L4virtio::Driver::Virtqueue::alloc_descriptor\(\)](#), [L4virtio::Driver::Virtqueue::desc\(\)](#), [L4virtio::Virtqueue::Desc::flags](#), [l4virtio_block_header_t::ioprio](#), [L4virtio::Virtqueue::Desc::len](#), [L4virtio::Virtqueue::Desc::Flags::raw](#), [l4virtio_block_header_t::sector](#), and [l4virtio_block_header_t::type](#).

```

Finalize handshake with the device.

Must be called after all queues have been set up and before the first request is sent. It is still possible to add more shared dataspace after the handshake has been finished.

Definition at line 156 of file [l4virtio](#).

16.364.2.4 driver_connect()

```
void L4virtio::Driver::Device::driver_connect (
    L4::Cap< L4virtio::Device > srvcap,
    bool manage_notify = true ) [inline]
```

Contacts the device and starts the initial handshake.

Parameters

| | |
|----------------------|--|
| <i>srvcap</i> | Capability for device communication. |
| <i>manage_notify</i> | Set up a semaphore for notifications from the device. See below. |

Exceptions

| | |
|-----------------------------------|-----------------------------|
| L4::Runtime_error | if the initialisation fails |
|-----------------------------------|-----------------------------|

This function contacts the server, sets up the notification channels and the configuration dataspace. After this is done, the caller can set up any dataspace it needs. The initialisation then needs to be finished by calling [driver_acknowledge\(\)](#).

Per default this function creates and registers a semaphore for receiving notification from the device. This semaphore is used in the blocking functions [send_and_wait\(\)](#), [wait\(\)](#) and [next_used\(\)](#).

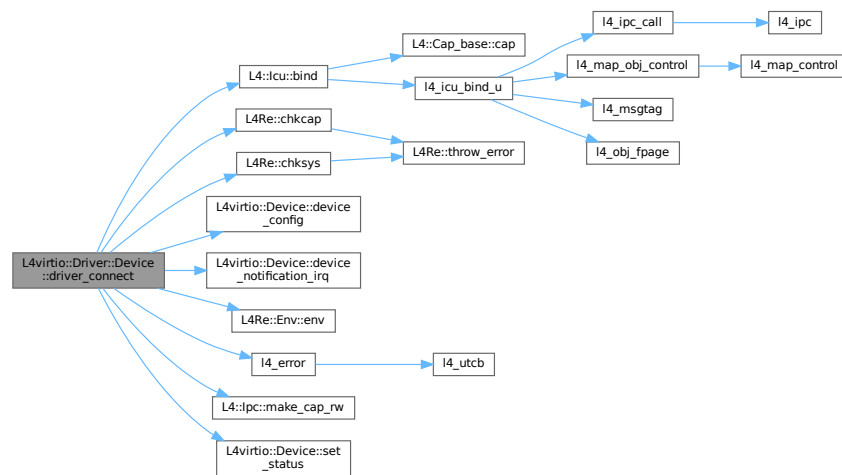

When `manage_notify` is false, then the caller may manually register and handle notification interrupts from the device. This is for example useful, when the client runs in an application with a server loop.

Definition at line 56 of file [l4virtio](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.364.2.5 feature_negotiated()

```
bool L4virtio::Driver::Device::feature_negotiated (
    unsigned int feat ) const [inline]
```

Check if a particular feature bit was negotiated with the device.

The result is only valid after [driver_acknowledge\(\)](#) was called (when the handshake with the device was completed).

Parameters

| | |
|-------------|------------------|
| <i>feat</i> | The feature bit. |
|-------------|------------------|

Return values

| | |
|-------------|---|
| <i>true</i> | The feature is supported by both driver and device. |
|-------------|---|

Return values

| | |
|--------------|---|
| <i>false</i> | The feature is not supported by the driver and/or device. |
|--------------|---|

Definition at line 145 of file [l4virtio](#).

References [l4virtio_get_feature\(\)](#).

Here is the call graph for this function:

16.364.2.6 max_queue_size()

```
int L4virtio::Driver::Device::max_queue_size (
    int num ) const [inline]
```

Maximum queue size allowed by the device.

Parameters

| | |
|------------|--|
| <i>num</i> | Number of queue for which to determine the maximum size. |
|------------|--|

Definition at line 230 of file [l4virtio](#).

Referenced by [L4virtio::Driver::Virtio_net_device::rx_queue_size\(\)](#), [L4virtio::Driver::Block_device::setup_device\(\)](#), and [L4virtio::Driver::Virtio_net_device::tx_queue_size\(\)](#).

Here is the caller graph for this function:

16.364.2.7 register_ds()

```
int L4virtio::Driver::Device::register_ds (
    L4::Cap< L4Re::Dataspace > ds,
    l4_umword_t offset,
    l4_umword_t size,
    l4_uint64_t * devaddr ) [inline]
```

Share a dataspace with the device.

Parameters

| | |
|----------------|--|
| <i>ds</i> | Dataspace to share with the device. |
| <i>offset</i> | Offset in dataspace where the shared part starts. |
| <i>size</i> | Total size in bytes of the shared space. |
| <i>devaddr</i> | Start of shared space in the device address space. |

Although this function allows to share only a part of the given dataspace for convenience, the granularity of sharing is always the dataspace level. Thus, the remainder of the dataspace is not protected from the device.

When communicating with the device, addresses must be given with respect to the device address space. This is not the same as the virtual address space of the client in order to not leak information about the address space layout.

Definition at line 196 of file [l4virtio](#).

References [L4::lpc::make_cap_rw\(\)](#), and [L4virtio::Device::register_ds\(\)](#).

16.364.2.8 send()

```
void L4virtio::Driver::Device::send (
    Virtqueue & queue,
    l4_uint16_t descno ) [inline]
```

Send a request to the device.

Parameters

| | |
|---------------|---|
| <i>queue</i> | Queue that contains the request in its descriptor table |
| <i>descno</i> | Index of first entry in descriptor table where |

Definition at line 312 of file [l4virtio](#).

References [L4virtio::Driver::Virtqueue::enqueue_descriptor\(\)](#).

Referenced by [send_and_wait\(\)](#), [L4virtio::Driver::Block_device::send_request\(\)](#), and [L4virtio::Driver::Virtio_net_device::tx\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.364.2.9 send_and_wait()

```
int L4virtio::Driver::Device::send_and_wait (
    Virtqueue & queue,
    l4_uint16_t descno ) [inline]
```

Send a request to the device and wait for it to be processed.

Parameters

| | |
|---------------|---|
| <i>queue</i> | Queue that contains the request in its descriptor table |
| <i>descno</i> | Index of first entry in descriptor table where |

This function provides a simple mechanism to send requests synchronously. It must not be used with other requests at the same time as it directly waits for a notification on the device irq cap.

Precondition

[driver_connect\(\)](#) was called with `manage_notify`.

Definition at line 247 of file [l4virtio](#).

Here is the caller graph for this function:

16.364.2.10 wait()

```
int L4virtio::Driver::Device::wait (
    int index ) const [inline]
```

Wait for a notification from the device.

Parameters

| | |
|--------------|--------------------------------|
| <i>index</i> | Notification slot to wait for. |
|--------------|--------------------------------|

Precondition

[driver_connect\(\)](#) was called with `manage_notify`.

Definition at line 268 of file [l4virtio](#).

**16.364.2.11 wait_for_next_used()**

```

int L4virtio::Driver::Device::wait_for_next_used (
    Virtqueue & queue,
    l4_uint32_t * len = nullptr ) const [inline]
  
```

Wait for the next item to arrive in the used queue and return it.

Parameters

| | | |
|-----|--------------|--|
| | <i>queue</i> | A queue. |
| out | <i>len</i> | (optional) Size of valid data in finished block. Note that this is the value reported by the device, which may set it to a value that is larger than the original buffer size. |

Return values

| | |
|----------|--|
| ≥ 0 | Descriptor number of item removed from used queue. |
| < 0 | IPC error while waiting for notification. |

The call blocks until the next item is available in the used queue.

Precondition

[driver_connect\(\)](#) was called with `manage_notify`.

16.365 L4virtio::Driver::Virtio_net_device Class Reference

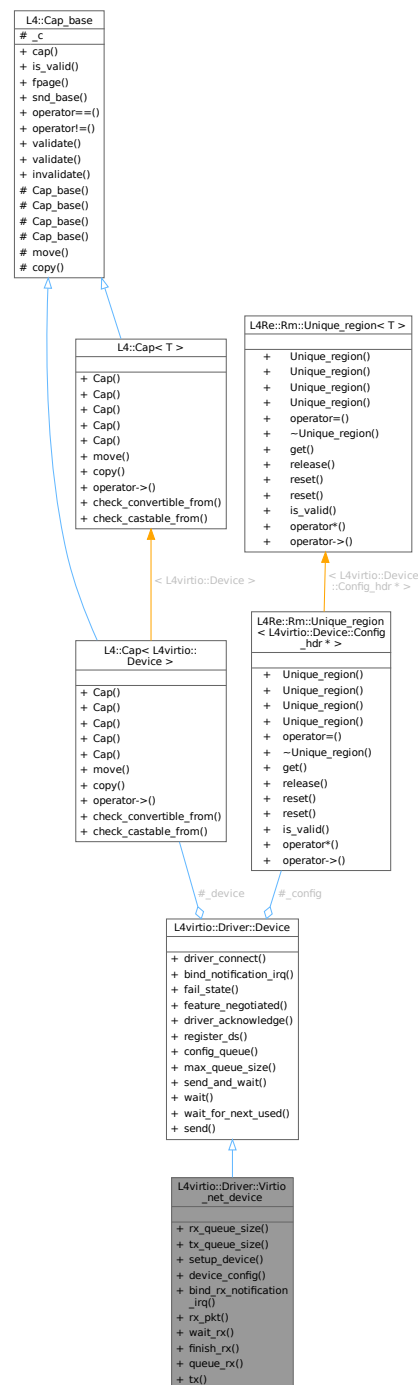

Simple class for accessing a virtio net device.

```
#include <virtio-net>
```

Inheritance diagram for L4virtio::Driver::Virtio_net_device:

Collaboration diagram for L4virtio::Driver::Virtio_net_device:

Data Structures

- struct [Packet](#)

Structure for a network packet (header including data) with maximum size, assuming that no extra features have been negotiated.

Public Member Functions

- int [rx_queue_size](#) () const
Return the maximum receive queue size allowed by the device.
- int [tx_queue_size](#) () const
Return the maximum transmit queue size allowed by the device.
- void [setup_device](#) (L4::Cap< [L4virtio::Device](#) > srvcap)
Establish a connection to the device and set up shared memory.
- [l4virtio_net_config_t](#) const & [device_config](#) () const
Return a reference to the device configuration.
- int [bind_rx_notification_irq](#) (L4::Cap< [L4::Thread](#) > thread, [l4_umword_t](#) label)
Bind the rx notification IRQ to the specified thread.
- [Packet](#) & [rx_pkt](#) ([l4_uint16_t](#) descno)
Return a reference to the RX packet buffer of the specified descriptor, e.g.
- [l4_uint16_t](#) [wait_rx](#) ([l4_uint32_t](#) *len=nullptr)
Block until a network packet has been received from the device and return the descriptor number.
- void [finish_rx](#) ([l4_uint16_t](#) descno)
Free an RX descriptor number to make it available for the RX queue again.
- void [queue_rx](#) ()
Queue new available descriptors in the RX queue.
- bool [tx](#) (std::function< [l4_uint32_t](#)([Packet](#) &)> prepare)
Attempt to allocate a descriptor in the TX queue and transmit the packet, after calling the prepare callback.

Public Member Functions inherited from [L4virtio::Driver::Device](#)

- void [driver_connect](#) (L4::Cap< [L4virtio::Device](#) > srvcap, bool manage_notify=true)
Contacts the device and starts the initial handshake.
- int [bind_notification_irq](#) (unsigned index, L4::Cap< [L4::Triggerable](#) > irq) const
Register a triggerable to receive notifications from the device.
- bool [fail_state](#) () const
Return true if the device is in a fail state.
- bool [feature_negotiated](#) (unsigned int feat) const
Check if a particular feature bit was negotiated with the device.
- int [driver_acknowledge](#) ()
Finalize handshake with the device.
- int [register_ds](#) (L4::Cap< [L4Re::Dataspace](#) > ds, [l4_umword_t](#) offset, [l4_umword_t](#) size, [l4_uint64_t](#) *devaddr)
Share a dataspace with the device.
- int [config_queue](#) (int num, unsigned size, [l4_uint64_t](#) desc_addr, [l4_uint64_t](#) avail_addr, [l4_uint64_t](#) used_↔
addr)
Send the virtqueue configuration to the device.
- int [max_queue_size](#) (int num) const
Maximum queue size allowed by the device.
- int [send_and_wait](#) ([Virtqueue](#) &queue, [l4_uint16_t](#) descno)
Send a request to the device and wait for it to be processed.
- int [wait](#) (int index) const
Wait for a notification from the device.
- int [wait_for_next_used](#) ([Virtqueue](#) &queue, [l4_uint32_t](#) *len=nullptr) const
Wait for the next item to arrive in the used queue and return it.
- void [send](#) ([Virtqueue](#) &queue, [l4_uint16_t](#) descno)
Send a request to the device.

16.365.1 Detailed Description

Simple class for accessing a virtio net device.

Definition at line 30 of file [virtio-net](#).

16.365.2 Member Function Documentation

16.365.2.1 `bind_rx_notification_irq()`

```
int L4virtio::Driver::Virtio_net_device::bind_rx_notification_irq (
    L4::Cap< L4::Thread > thread,
    l4_umword_t label ) [inline]
```

Bind the rx notification IRQ to the specified thread.

Parameters

| | |
|---------------|---|
| <i>thread</i> | Thread to bind the notification IRQ to. |
| <i>label</i> | Label to assign to the IRQ. |

Definition at line 169 of file [virtio-net](#).

References [l4_error\(\)](#).

Here is the call graph for this function:

16.365.2.2 `finish_rx()`

```
void L4virtio::Driver::Virtio_net_device::finish_rx (
    l4_uint16_t descno ) [inline]
```

Free an RX descriptor number to make it available for the RX queue again.

Parameters

| | |
|---------------|--|
| <i>descno</i> | Descriptor number in the virtio queue. |
|---------------|--|

Usually [queue_rx\(\)](#) should be called afterwards to queue the freed descriptor(s).

Definition at line 230 of file [virtio-net](#).

References [L4virtio::Driver::Virtqueue::free_descriptor\(\)](#).

Here is the call graph for this function:

16.365.2.3 rx_pkt()

```
Packet & L4virtio::Driver::Virtio_net_device::rx_pkt (
    l4_uint16_t descno ) [inline]
```

Return a reference to the RX packet buffer of the specified descriptor, e.g.

from [wait_rx\(\)](#).

Parameters

| | |
|---------------|--|
| <i>descno</i> | Descriptor number in the virtio queue. |
|---------------|--|

Definition at line 180 of file [virtio-net](#).

References [L4virtio::Virtqueue::num\(\)](#).

Here is the call graph for this function:

16.365.2.4 rx_queue_size()

```
int L4virtio::Driver::Virtio_net_device::rx_queue_size ( ) const [inline]
```

Return the maximum receive queue size allowed by the device.

[wait_rx\(\)](#) will return a descriptor number that is smaller than this size.

Definition at line 47 of file [virtio-net](#).

References [L4virtio::Driver::Device::max_queue_size\(\)](#).

Referenced by [setup_device\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.365.2.5 setup_device()

```
void L4virtio::Driver::Virtio_net_device::setup_device (
    L4::Cap< L4virtio::Device > srvcap ) [inline]
```

Establish a connection to the device and set up shared memory.

Parameters

| | |
|---------------|--|
| <i>srvcap</i> | IPC capability of the channel to the server. |
|---------------|--|

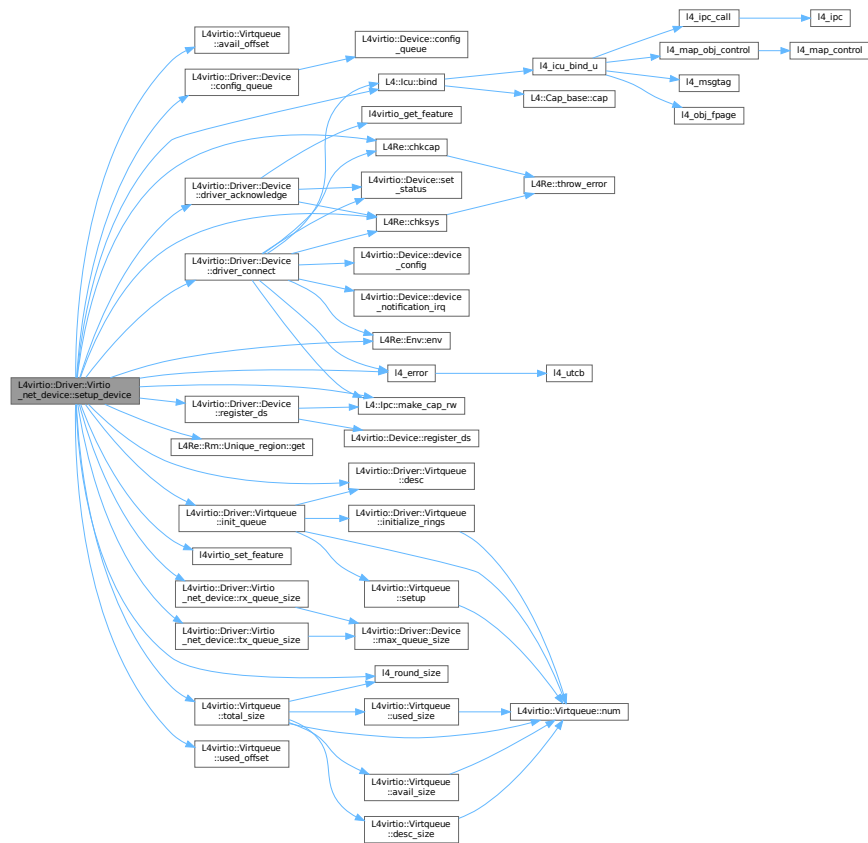

This function starts a handshake with the device and sets up the virtqueues for communication and the additional data structures for the network device.

Definition at line 66 of file [virtio-net](#).

References [L4virtio::Virtqueue::Desc::addr](#), [L4virtio::Virtqueue::avail_offset\(\)](#), [L4::lcu::bind\(\)](#), [L4Re::chkcap\(\)](#), [L4Re::chksys\(\)](#), [L4virtio::Driver::Device::config_queue\(\)](#), [L4Re::Mem_alloc::Continuous](#), [L4virtio::Driver::Virtqueue::desc\(\)](#), [L4virtio::Driver::Device::driver_acknowledge\(\)](#), [L4virtio::Driver::Device::driver_connect\(\)](#), [L4Re::Env::env\(\)](#), [L4Re::Rm::Unique_region< T >::get\(\)](#), [L4virtio::Driver::Virtqueue::init_queue\(\)](#), [L4_EINVAL](#), [L4_ENODEV](#), [l4_error\(\)](#), [L4_PAGESHIFT](#), [l4_round_size\(\)](#), [L4VIRTIO_FEATURE_VERSION_1](#), [L4VIRTIO_ID_NET](#), [l4virtio_set_feature\(\)](#),

Here is the call graph for this function:

16.365.2.6 tx()

```
bool L4virtio::Driver::Virtio_net_device::tx (
    std::function< 14_uint32_t(Packet &)> prepare ) [inline]
```

Attempt to allocate a descriptor in the TX queue and transmit the packet, after calling the prepare callback.

Parameters

| | |
|----------------|--|
| <i>prepare</i> | Function that fills the packet with data, should return the length of the data copied to the packet. |
|----------------|--|

Return values

| | |
|--------------|------------------------|
| <i>true</i> | The packet was queued. |
| <i>false</i> | TX queue is full. |

The prepare callback should fill the packet with data and return the length of the packet data (without the size of the virtio-net packet header).

Definition at line 260 of file [virtio-net](#).

References [L4virtio::Driver::Virtqueue::alloc_descriptor\(\)](#), [L4virtio::Driver::Virtqueue::desc\(\)](#), [L4virtio::Virtqueue::Desc::len](#), and [L4virtio::Driver::Device::send\(\)](#).

Here is the call graph for this function:

16.365.2.7 tx_queue_size()

```
int L4virtio::Driver::Virtio_net_device::tx_queue_size ( ) const [inline]
```

Return the maximum transmit queue size allowed by the device.

`tx()` will fail if the amount of queued packets exceeds this size.

Definition at line 54 of file [virtio-net](#).

References [L4virtio::Driver::Device::max_queue_size\(\)](#).

Referenced by [setup_device\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.365.2.8 wait_rx()

```

14_uint16_t L4virtio::Driver::Virtio_net_device::wait_rx (
    14_uint32_t * len = nullptr ) [inline]

```

Block until a network packet has been received from the device and return the descriptor number.

Precondition

The calling thread must be bound to the rx notification IRQ via `bind_rx_notification_irq()`.

Parameters

| | | |
|-----|-----|---|
| out | len | (optional) Length of valid data in RX packet. |
|-----|-----|---|

Returns

Descriptor number of received packet.

The packet data can be obtained with `rx_pkt()`. `finish_rx()` should be called after the packet buffer can be returned to the RX queue.

Definition at line 202 of file `virtio-net`.

References `L4Re::chksys()`, and `L4virtio::Driver::Virtqueue::find_next_used()`.

Here is the call graph for this function:

- bool [no_notify_host](#) () const
 - Get the no notify flag of this queue.*
- void [no_notify_host](#) (bool value)
 - Set the no-notify flag for this queue.*
- [l4_uint16_t](#) [get_avail_idx](#) () const
 - Get available index from available ring (for debugging).*
- [l4_uint16_t](#) [get_tail_avail_idx](#) () const
 - Get tail-available index stored in local state (for debugging).*

Additional Inherited Members

Public Types inherited from [L4virtio::Virtqueue](#)

- enum
 - Fixed alignment values for different parts of a virtqueue.*

Static Public Member Functions inherited from [L4virtio::Virtqueue](#)

- static unsigned long [total_size](#) (unsigned [num](#))
Calculate the total size for a virtqueue of the given dimensions.
- static unsigned long [desc_size](#) (unsigned [num](#))
*Calculate the size of the descriptor table for *num* entries.*
- static unsigned long [desc_align](#) ()
Get the alignment in zero LSBs needed for the descriptor table.
- static unsigned long [avail_size](#) (unsigned [num](#))
*Calculate the size of the available ring for *num* entries.*
- static unsigned long [avail_align](#) ()
Get the alignment in zero LSBs needed for the available ring.
- static unsigned long [used_size](#) (unsigned [num](#))
*Calculate the size of the used ring for *num* entries.*
- static unsigned long [used_align](#) ()
Get the alignment in zero LSBs needed for the used ring.

Protected Member Functions inherited from [L4virtio::Virtqueue](#)

- [Virtqueue](#) ()=default
Create a disabled virtqueue.

Protected Attributes inherited from [L4virtio::Virtqueue](#)

- [Desc](#) * [_desc](#) = nullptr
pointer to descriptor table, NULL if queue is off.
- [Avail](#) * [_avail](#) = nullptr
pointer to available ring.
- [Used](#) * [_used](#) = nullptr
pointer to used ring.
- [l4_uint16_t](#) [_current_avail](#) = 0
The life counter for the queue.
- [l4_uint16_t](#) [_idx_mask](#) = 0
mask used for indexing into the descriptor table and the rings.

16.367.1 Detailed Description

Driver-side implementation of a [Virtqueue](#).

Adds function for managing the descriptor list, enqueueing new and dequeueing finished requests.

Note

The [Virtqueue](#) implementation is not thread-safe.

Definition at line 469 of file [virtqueue](#).

16.367.2 Member Function Documentation

16.367.2.1 alloc_descriptor()

```
l4_uint16_t L4virtio::Driver::Virtqueue::alloc_descriptor ( ) [inline]
```

Allocate and return an unused descriptor from the descriptor table.

The descriptor will be removed from the free list, the content should be considered undefined. After use, it needs to be freed using [free_descriptor\(\)](#).

Returns

The index of the reserved descriptor or Virtqueue::Eoq if no free descriptor is available.

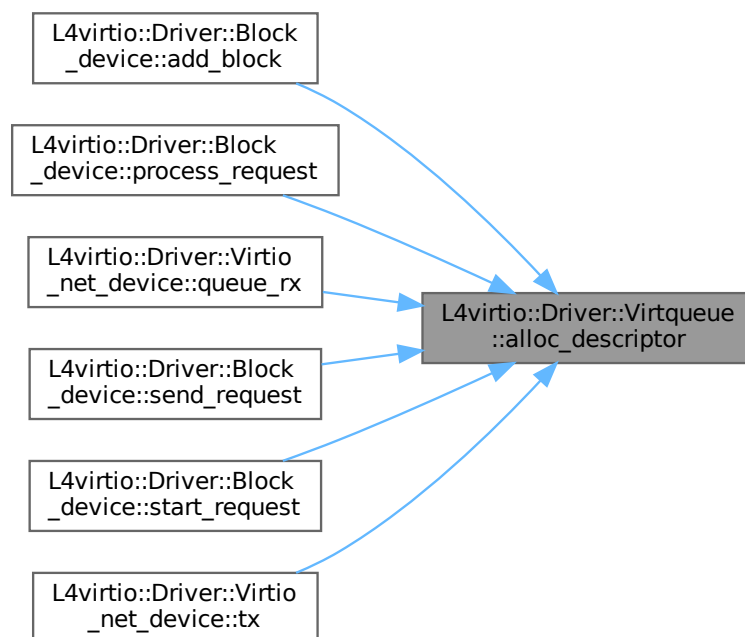

Note: the implementation uses $(2^{16} - 1)$ as the end of queue marker. That means that the final entry in the queue can not be allocated iff the queue size is 2^{16} .

Definition at line 557 of file [virtqueue](#).

References [L4virtio::Virtqueue::_desc](#), and [L4virtio::Virtqueue::Desc::next](#).

Referenced by [L4virtio::Driver::Block_device::add_block\(\)](#), [L4virtio::Driver::Block_device::process_request\(\)](#), [L4virtio::Driver::Virtio_net_device::queue_rx\(\)](#), [L4virtio::Driver::Block_device::send_request\(\)](#), [L4virtio::Driver::Block_device::start_request\(\)](#) and [L4virtio::Driver::Virtio_net_device::tx\(\)](#).

Here is the caller graph for this function:

16.367.2.2 desc()

```
Desc & L4virtio::Driver::Virtqueue::desc (
    l4_uint16_t descno ) [inline]
```

Return a reference to a descriptor in the descriptor table.

Parameters

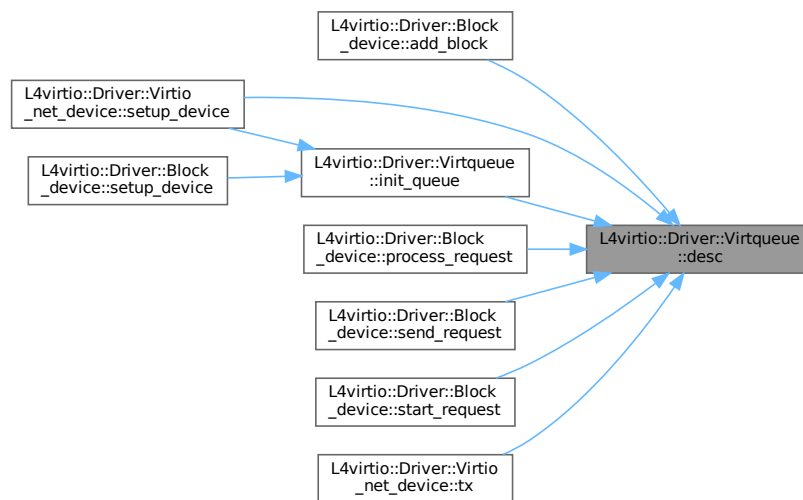

| | |
|---------------|---|
| <i>descno</i> | Index of the descriptor, expected to be in correct range. |
|---------------|---|

Definition at line 589 of file [virtqueue](#).

16.367.2.3 enqueue_descriptor()

```
void L4virtio::Driver::Virtqueue::enqueue_descriptor (
    uint16_t descno ) [inline]
```

Enqueue a descriptor in the available ring.

Parameters

| | |
|---------------|--|
| <i>descno</i> | Index of the head descriptor to enqueue. |
|---------------|--|

Definition at line 573 of file [virtqueue](#).

References [L4virtio::Virtqueue::_avail](#), [L4virtio::Virtqueue::_idx_mask](#), [L4virtio::Virtqueue::Avail::idx](#), and [L4virtio::Virtqueue::Avail::ring](#).

16.367.2.4 find_next_used()

```

14_uint16_t L4virtio::Driver::Virtqueue::find_next_used (
    14_uint32_t * len = nullptr ) [inline]
  
```

Return the next finished block.

Parameters

| | | |
|-----|-----|--|
| out | len | (optional) Size of valid data in finished block. Note that this is the value reported by the device, which may set it to a value that is larger than the original buffer size. |
|-----|-----|--|

Returns

Index of the head or Virtqueue::Eoq if no used element is currently available.

Definition at line 608 of file [virtqueue](#).

References [L4virtio::Virtqueue::_current_avail](#), [L4virtio::Virtqueue::_idx_mask](#), [L4virtio::Virtqueue::_used](#), [L4virtio::Virtqueue::Used::idx](#), [L4virtio::Virtqueue::Used::elem::len](#), and [L4virtio::Virtqueue::Used::ring](#).

16.367.2.5 free_descriptor()

```

void L4virtio::Driver::Virtqueue::free_descriptor (
    14_uint16_t head,
    14_uint16_t tail ) [inline]
  
```

Free a chained list of descriptors in the descriptor queue.

Parameters

| | |
|-------------|---|
| <i>head</i> | Index of the first element in the descriptor chain. |
| <i>tail</i> | Index of the last element in the descriptor chain. |

Simply takes the descriptor chain and prepends it to the beginning of the free list. Assumes that the list has been correctly chained.

Definition at line 630 of file [virtqueue](#).

References [L4virtio::Virtqueue::_desc](#), [L4virtio::Virtqueue::_idx_mask](#), and [L4virtio::Virtqueue::Desc::next](#).

16.367.2.6 `init_queue()` [1/2]

```
void L4virtio::Driver::Virtqueue::init_queue (
    unsigned num,
    void * base ) [inline]
```

Initialize this virtqueue.

Parameters

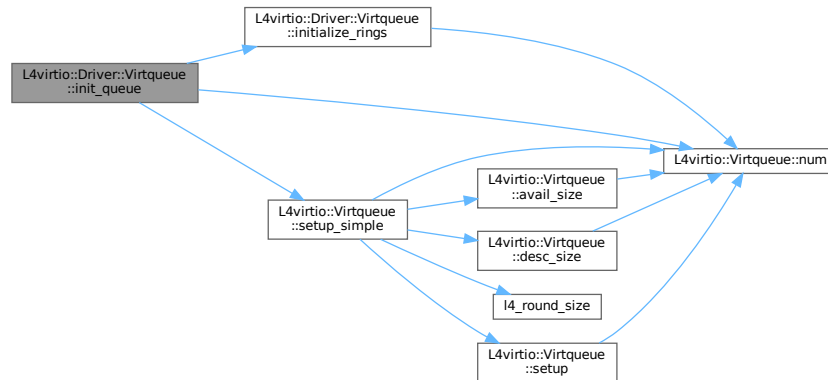

| | |
|-------------|--|
| <i>num</i> | The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2). |
| <i>base</i> | The base address for the queue data structure. |

This function sets up the memory and initializes the freelist.

Definition at line 536 of file [virtqueue](#).

References [initialize_rings\(\)](#), [L4virtio::Virtqueue::num\(\)](#), and [L4virtio::Virtqueue::setup_simple\(\)](#).

Here is the call graph for this function:

16.367.2.7 init_queue() [2/2]

```

void L4virtio::Driver::Virtqueue::init_queue (
    unsigned num,
    void * desc,
    void * avail,
    void * used ) [inline]

```

Initialize this virtqueue.

Parameters

| | |
|--------------|---|
| <i>num</i> | The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2). |
| <i>desc</i> | The address of the descriptor table. (Must be Desc_align aligned and at least desc_size (num) bytes in size.) |
| <i>avail</i> | The address of the available ring. (Must be Avail_align aligned and at least avail_size (num) bytes in size.) |
| <i>used</i> | The address of the used ring. (Must be Used_align aligned and at least used_size (num) bytes in size.) |

This function sets up the memory and initializes the freelist.

Definition at line 521 of file [virtqueue](#).

Here is the caller graph for this function:

16.367.2.8 initialize_rings()

```
void L4virtio::Driver::Virtqueue::initialize_rings (
    unsigned num ) [inline]
```

Initialize the descriptor table and the index structures of this queue.

Parameters

| | |
|------------------|--|
| <code>num</code> | The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2). |
|------------------|--|

Precondition

The queue must be set up correctly with [setup\(\)](#) or [setup_simple\(\)](#).

Definition at line 493 of file [virtqueue](#).

16.368 L4virtio::Ptr< T > Class Template Reference

Pointer used in virtio descriptors.

```
#include <virtqueue>
```

Inheritance diagram for L4virtio::Ptr< T >:

Collaboration diagram for L4virtio::Ptr< T >:

Public Types

- enum `Invalid_type` { `Invalid` }
Type for making an invalid (NULL) [Ptr](#).

Public Member Functions

- [Ptr](#) ([Invalid_type](#))
Make and invalid [Ptr](#).
- [Ptr](#) ([l4_uint64_t](#) vm_addr)
Make a [Ptr](#) from a raw 64bit address.
- [l4_uint64_t](#) [get](#) () const
- bool [is_valid](#) () const

16.368.1 Detailed Description

template<typename T>
class L4virtio::Ptr< T >

Pointer used in virtio descriptors.

As the descriptor contain guest addresses these pointers cannot be dereferenced directly.

Definition at line [47](#) of file [virtqueue](#).

16.368.2 Member Enumeration Documentation

16.368.2.1 Invalid_type

```
template<typename T >
enum L4virtio::Ptr::Invalid_type
```

Type for making an invalid (NULL) [Ptr](#).

Enumerator

| | |
|---------|--|
| Invalid | Use to set a Ptr to invalid (NULL) |
|---------|--|

Definition at line [51](#) of file [virtqueue](#).

16.368.3 Member Function Documentation

16.368.3.1 get()

```
template<typename T >
l4_uint64_t L4virtio::Ptr< T >::get ( ) const [inline]
```

Returns

The raw 64bit address of the stored pointer.

Definition at line 62 of file [virtqueue](#).

Referenced by [L4virtio::Virtqueue::Desc::dump\(\)](#), [L4virtio::Svr::Driver_mem_list_t< DATA >::load_desc\(\)](#), [L4virtio::Svr::Driver_mem_list_t< DATA >::load_desc\(\)](#), [L4virtio::Svr::Driver_mem_list_t< DATA >::load_desc\(\)](#), and [L4virtio::Svr::Driver_mem_region_t< DATA >::local\(\)](#).

Here is the caller graph for this function:

**16.368.3.2 is_valid()**

```

template<typename T >
bool L4virtio::Ptr< T >::is_valid ( ) const [inline]

```

Returns

true if the stored pointer is valid (not NULL).

Definition at line 65 of file [virtqueue](#).

The documentation for this class was generated from the following file:

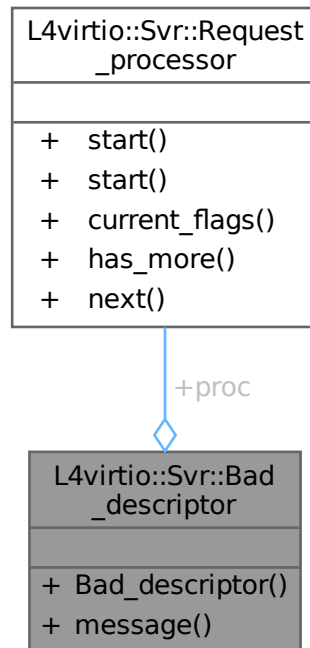

- `l4/l4virtio/virtqueue`

16.369 L4virtio::Svr::Bad_descriptor Struct Reference

Exception used by Queue to indicate descriptor errors.

```
#include <virtio>
```

Collaboration diagram for L4virtio::Svr::Bad_descriptor:

Public Types

- enum [Error](#) {
[Bad_address](#) , [Bad_rights](#) , [Bad_flags](#) , [Bad_next](#) ,
[Bad_size](#) }

The error code.

Public Member Functions

- [Bad_descriptor](#) ([Request_processor](#) const *[proc](#), [Error](#) e)
Make a bad descriptor exception.
- char const * [message](#) () const
Get a human readable description of the error code.

Data Fields

- [Request_processor](#) const * **proc**
The processor that triggered the exception.

16.369.1 Detailed Description

Exception used by Queue to indicate descriptor errors.

Definition at line 397 of file [virtio](#).

16.369.2 Member Enumeration Documentation

16.369.2.1 Error

```
enum L4virtio::Svr::Bad_descriptor::Error
```

The error code.

Enumerator

| | |
|-------------|--|
| Bad_address | Address cannot be translated. |
| Bad_rights | Missing access rights on memory. |
| Bad_flags | Invalid combination of descriptor flags. |
| Bad_next | Invalid next index. |
| Bad_size | Invalid size of memory block. |

Definition at line 400 of file [virtio](#).

16.369.3 Constructor & Destructor Documentation

16.369.3.1 Bad_descriptor()

```
L4virtio::Svr::Bad_descriptor::Bad_descriptor (
    Request_processor const * proc,
    Error e ) [inline]
```

Make a bad descriptor exception.

Parameters

| | |
|-------------|---|
| <i>proc</i> | The request processor causing the exception |
| <i>e</i> | The error code. |

Definition at line 421 of file [virtio](#).

16.369.4 Member Function Documentation

16.369.4.1 message()

```
char const * L4virtio::Svr::Bad_descriptor::message ( ) const [inline]
```

Get a human readable description of the error code.

Returns

Message describing the error.

Definition at line 430 of file [virtio](#).

References [Bad_address](#), [Bad_flags](#), [Bad_next](#), [Bad_rights](#), and [Bad_size](#).

Referenced by [Virtio_switch::handle_port_irq\(\)](#), and [Virtio_net_transfer::transfer\(\)](#).

16.370 L4virtio::Svr::Block_dev_base< Ds_data > Class Template Reference

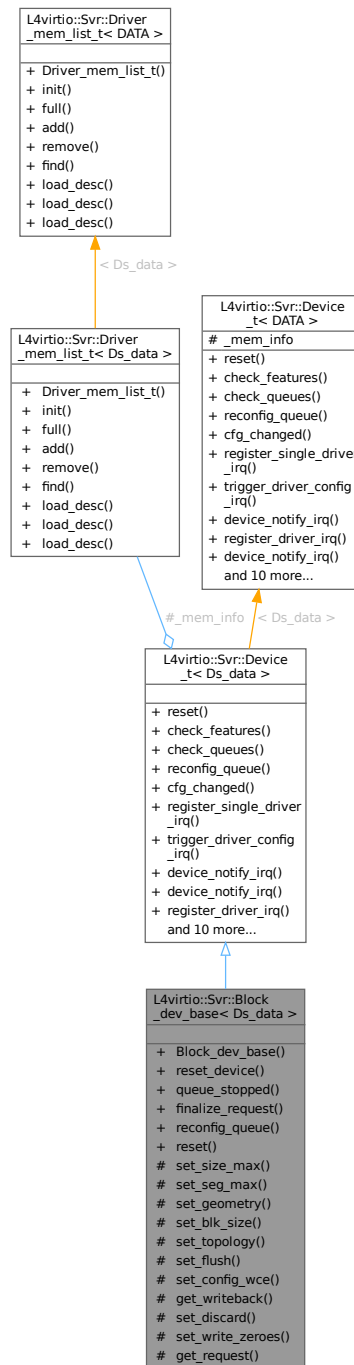

Base class for virtio block devices.

```
#include <virtio-block>
```

Inheritance diagram for L4virtio::Svr::Block_dev_base< Ds_data >:

Collaboration diagram for L4virtio::Svr::Block_dev_base< Ds_data >:

Public Member Functions

- **Block_dev_base** (`l4_uint32_t` vendor, unsigned queue_size, `l4_uint64_t` capacity, bool read_only)
Create a new virtio block device.
- virtual void **reset_device** ()=0
Reset the actual hardware device.
- virtual bool **queue_stopped** ()=0

- *Return true, if the queues should not be processed further.*
- void **finalize_request** (cxx::unique_ptr< Request > req, unsigned sz, [l4_uint8_t](#) status=L4VIRTIO_BLOCK_S_OK)
Releases resources related to a request and notifies the client.
- int **reconfig_queue** (unsigned idx) override
callback for client queue-config request
- void **reset** () override
reset callback, called for doing a device reset

Public Member Functions inherited from [L4virtio::Svr::Device_t< Ds_data >](#)

- virtual bool **check_features** ()
callback for checking the subset of accepted features
- virtual void **cfg_changed** (unsigned)
callback for client device configuration changes
- virtual [L4::Cap< L4::Irq >](#) **device_notify_irq** () const
callback to gather the device notification IRQ (old-style)
- virtual [L4::Cap< L4::Irq >](#) **device_notify_irq** (unsigned idx)
Callback to gather the device notification IRQ (multi IRQ).
- virtual void **register_driver_irq** (unsigned idx)
Callback for registering an notification IRQ (multi IRQ).
- virtual unsigned **num_events_supported** () const
Return the highest notification index supported.
- [Device_t](#) ([Dev_config](#) *dev_config)
Make a device for the given config.
- [Mem_list](#) const * **mem_info** () const
Get the memory region list used for this device.
- void **reset_queue_config** (unsigned idx, unsigned num_max, bool inc_generation=false)
Trigger reset for the configuration space for queue idx.
- void **init_mem_info** (unsigned num)
Initialize the memory region list to the given maximum.
- void **device_error** ()
Transition device into DEVICE_NEEDS_RESET state.
- bool **setup_queue** ([Virtqueue](#) *q, unsigned qn, unsigned num_max)
Enable/disable the specified queue.
- bool **handle_mem_cmd_write** ()
Check for a value in the cmd register and handle a write.
- void **enable_trusted_ds_validation** ()
Enable trusted dataspace validation.
- void **add_trusted_dataspaces** (std::shared_ptr< [Ds_vector](#) const > ds)
Provide a list of trusted dataspaces that can be used for validation.

Protected Member Functions

- void **set_size_max** ([l4_uint32_t](#) sz)
Sets the maximum size of any single segment reported to client.
- void **set_seg_max** ([l4_uint32_t](#) sz)
Sets the maximum number of segments in a request that is reported to client.
- void **set_geometry** ([l4_uint16_t](#) cylinders, [l4_uint8_t](#) heads, [l4_uint8_t](#) sectors)
Set disk geometry that is reported to the client.

- void [set_blk_size](#) (l4_uint32_t sz)
Sets block disk size to be reported to the client.
- void [set_topology](#) (l4_uint8_t physical_block_exp, l4_uint8_t alignment_offset, l4_uint32_t min_io_size, l4_uint32_t opt_io_size)
Sets the I/O alignment information reported back to the client.
- void **set_flush** ()
Enables the flush command.
- void [set_config_wce](#) (l4_uint8_t writeback)
Sets cache mode and enables the writeback toggle.
- l4_uint8_t [get_writeback](#) ()
Get the writeback field from the configuration space.
- void [set_discard](#) (l4_uint32_t max_discard_sectors, l4_uint32_t max_discard_seg, l4_uint32_t discard_↔ sector_alignment)
Sets constraints for and enables the discard command.
- void [set_write_zeroes](#) (l4_uint32_t max_write_zeroes_sectors, l4_uint32_t max_write_zeroes_seg, l4_uint8_t write_zeroes_may_unmap)
Sets constraints for and enables the write zeroes command.
- cxx::unique_ptr< Request > **get_request** ()
Return one request if available.

Additional Inherited Members

Protected Attributes inherited from [L4virtio::Svr::Device_t< Ds_data >](#)

- [Mem_list _mem_info](#)
Memory region list.

16.370.1 Detailed Description

```
template<typename Ds_data>
class L4virtio::Svr::Block_dev_base< Ds_data >
```

Base class for virtio block devices.

Use this class as a base to implement your own specific block device.

Definition at line 257 of file [virtio-block](#).

16.370.2 Constructor & Destructor Documentation

16.370.2.1 Block_dev_base()

```
template<typename Ds_data >
L4virtio::Svr::Block_dev_base< Ds_data >::Block_dev_base (
    l4_uint32_t vendor,
    unsigned queue_size,
    l4_uint64_t capacity,
    bool read_only ) [inline]
```

Create a new virtio block device.

Parameters

| | |
|-------------------|---|
| <i>vendor</i> | Vendor ID |
| <i>queue_size</i> | Number of entries to provide in avail and used queue. |
| <i>capacity</i> | Size of the device in 512-byte sectors. |
| <i>read_only</i> | True, if the device should not be writable. |

Definition at line 442 of file [virtio-block](#).

References [L4VIRTIO_FEATURE_VERSION_1](#), and [L4virtio::Svr::Device_t< Ds_data >::reset_queue_config\(\)](#).

Here is the call graph for this function:

16.370.3 Member Function Documentation

16.370.3.1 finalize_request()

```

template<typename Ds_data >
void L4virtio::Svr::Block_dev_base< Ds_data >::finalize_request (
    cxx::unique_ptr< Request > req,
    unsigned sz,
    l4_uint8_t status = L4VIRTIO_BLOCK_S_OK ) [inline]
  
```

Releases resources related to a request and notifies the client.

Parameters

| | |
|---------------|---|
| <i>req</i> | Pointer to request that has finished. |
| <i>sz</i> | Number of bytes consumed. |
| <i>status</i> | Status of request (see L4virtio_block_status). |

This function must be called when an asynchronous request finishes, either successfully or with an error. The status byte in the request must have been set prior to calling it.

Definition at line 481 of file [virtio-block](#).

References [L4virtio::Svr::Device_t< Ds_data >::device_error\(\)](#), [L4VIRTIO_IRQ_STATUS_VRING](#), [L4virtio::Virtqueue::no_notify_queue](#) and [L4virtio::Virtqueue::ready\(\)](#).

Here is the call graph for this function:

16.370.3.2 get_writeback()

```
template<typename Ds_data >
L4_uint8_t L4virtio::Svr::Block_dev_base< Ds_data >::get_writeback ( ) [inline], [protected]
```

Get the writeback field from the configuration space.

Returns

Value of the writeback field.

Definition at line 386 of file [virtio-block](#).

16.370.3.3 set_blk_size()

```
template<typename Ds_data >
void L4virtio::Svr::Block_dev_base< Ds_data >::set_blk_size (
    L4_uint32_t sz ) [inline], [protected]
```

Sets block disk size to be reported to the client.

Setting this does not change the logical sector size used for addressing the device.

Definition at line 330 of file [virtio-block](#).

16.370.3.4 set_config_wce()

```
template<typename Ds_data >
void L4virtio::Svr::Block_dev_base< Ds_data >::set_config_wce (
    L4_uint8_t writeback ) [inline], [protected]
```

Sets cache mode and enables the writeback toggle.

Parameters

| | |
|------------------|--|
| <i>writeback</i> | Mode of the cache (0 for writethrough, 1 for writeback). |
|------------------|--|

Definition at line 373 of file [virtio-block](#).

16.370.3.5 set_discard()

```
template<typename Ds_data >
void L4virtio::Svr::Block_dev_base< Ds_data >::set_discard (
    14_uint32_t max_discard_sectors,
    14_uint32_t max_discard_seg,
    14_uint32_t discard_sector_alignment ) [inline], [protected]
```

Sets constraints for and enables the discard command.

Parameters

| | |
|---------------------------------|--|
| <i>max_discard_sectors</i> | Maximum discard sectors size. |
| <i>max_discard_seg</i> | Maximum discard segment number. |
| <i>discard_sector_alignment</i> | Can be used by the driver when splitting a request based on alignment. |

Definition at line 400 of file [virtio-block](#).

16.370.3.6 set_size_max()

```
template<typename Ds_data >
void L4virtio::Svr::Block_dev_base< Ds_data >::set_size_max (
    14_uint32_t sz ) [inline], [protected]
```

Sets the maximum size of any single segment reported to client.

The limit is also applied to any incoming requests. Requests with larger segments result in an IO error being reported to the client. That means that `process_request()` can safely make the assumption that all segments in the received request are smaller.

Definition at line 288 of file [virtio-block](#).

16.370.3.7 set_topology()

```
template<typename Ds_data >
void L4virtio::Svr::Block_dev_base< Ds_data >::set_topology (
    14_uint8_t physical_block_exp,
    14_uint8_t alignment_offset,
    14_uint32_t min_io_size,
    14_uint32_t opt_io_size ) [inline], [protected]
```

Sets the I/O alignment information reported back to the client.

Parameters

| | |
|---------------------------|---|
| <i>physical_block_exp</i> | Number of logical blocks per physical block(log2) |
| <i>alignment_offset</i> | Offset of the first aligned logical block |
| <i>min_io_size</i> | Suggested minimum I/O size in blocks |
| <i>opt_io_size</i> | Optimal I/O size in blocks |

Definition at line 346 of file [virtio-block](#).

16.370.3.8 set_write_zeroes()

```
template<typename Ds_data >
void L4virtio::Svr::Block_dev_base< Ds_data >::set_write_zeroes (
    14_uint32_t max_write_zeroes_sectors,
    14_uint32_t max_write_zeroes_seg,
    14_uint8_t write_zeroes_may_unmap ) [inline], [protected]
```

Sets constraints for and enables the write zeroes command.

Parameters

| | |
|---------------------------------|---|
| <i>max_write_zeroes_sectors</i> | Maximum write zeroes sectors size. |
| <i>max_write_zeroes_seg</i> | maximum write zeroes segment number. |
| <i>write_zeroes_may_unmap</i> | Set if a write zeroes request can result in deallocating one or more sectors. |

Definition at line 420 of file [virtio-block](#).

The documentation for this class was generated from the following file:

- l4/l4virtio/server/virtio-block

16.371 L4virtio::Svr::Block_request< Ds_data > Class Template Reference

A request to read or write data.

```
#include <virtio-block>
```

Collaboration diagram for L4virtio::Svr::Block_request< Ds_data >:

Public Member Functions

- unsigned [data_size](#) () const
Compute the total size of the data in the request.
- bool **has_more** ()
Check if the request contains more data blocks.
- Data_block [next_block](#) ()
Return next block in scatter-gather list.
- [l4virtio_block_header_t](#) const & **header** () const
Return the block request header.

16.371.1 Detailed Description

```
template<typename Ds_data>
class L4virtio::Svr::Block_request< Ds_data >
```

A request to read or write data.

Definition at line 28 of file [virtio-block](#).

16.371.2 Member Function Documentation

16.371.2.1 data_size()

```
template<typename Ds_data >
unsigned L4virtio::Svr::Block_request< Ds_data >::data_size ( ) const [inline]
```

Compute the total size of the data in the request.

Return values

| | |
|-------------|--------------------------------------|
| <i>Size</i> | in bytes or 0 if there was an error. |
|-------------|--------------------------------------|

Exceptions

| | |
|--|---------------------------|
| L4::Runtime_error(-L4_EIO) | Request has a bad format. |
|--|---------------------------|

Note that this operation is relatively expensive as it has to iterate over the complete list of blocks.

Definition at line 63 of file [virtio-block](#).

References [L4virtio::Svr::Request_processor::has_more\(\)](#), [L4_EIO](#), [L4virtio::Svr::Request_processor::next\(\)](#), and [L4virtio::Svr::Request_processor::start\(\)](#).

Here is the call graph for this function:

16.371.2.2 next_block()

```
template<typename Ds_data >
Data_block L4virtio::Svr::Block_request< Ds_data >::next_block ( ) [inline]
```

Return next block in scatter-gather list.

Returns

Information about the next data block.

Exceptions

| | |
|--|----------------------------------|
| <i>L4::Runtime_error</i> | No more data block is available. |
| <i>Bad_descriptor</i> | Virtio request is corrupted. |

Definition at line 113 of file [virtio-block](#).

References [L4virtio::Svr::Bad_descriptor::Bad_size](#), [L4virtio::Svr::Request_processor::has_more\(\)](#), [L4_EEXIST](#), and [L4virtio::Svr::Request_processor::next\(\)](#).

Here is the call graph for this function:

Callback to gather the device notification IRQ (multi IRQ).
- virtual unsigned **num_events_supported** () const
Return the highest notification index supported.
- **Device_t** ([Dev_config](#) *dev_config)
Make a device for the given config.
- [Mem_list](#) const * **mem_info** () const
Get the memory region list used for this device.
- void **reset_queue_config** (unsigned idx, unsigned num_max, bool inc_generation=false)
Trigger reset for the configuration space for queue idx.
- void **init_mem_info** (unsigned num)
Initialize the memory region list to the given maximum.
- void **device_error** ()
Transition device into DEVICE_NEEDS_RESET state.
- bool **setup_queue** ([Virtqueue](#) *q, unsigned qn, unsigned num_max)
Enable/disable the specified queue.
- bool **handle_mem_cmd_write** ()
Check for a value in the cmd register and handle a write.
- void **enable_trusted_ds_validation** ()
Enable trusted dataspace validation.
- void **add_trusted_dataspaces** (std::shared_ptr< [Ds_vector](#) const > ds)
Provide a list of trusted dataspaces that can be used for validation.

Protected Member Functions

- [Port](#) * **port** (unsigned idx) override
Return the specified port.

Additional Inherited Members

Protected Attributes inherited from [L4virtio::Svr::Device_t< DATA >](#)

- [Mem_list](#) **_mem_info**
Memory region list.

16.374.1 Detailed Description

Base class implementing a virtio console device with L4Re-based notification handling.

This console device is derived from [Virtio_con](#) and already includes functionality to handle interrupts and notify drivers. If an interrupt is received, all the necessary interaction with the virtqueues is performed and only the actual data processing has to be done by the derived class. By default all available ports are added and an "open"-request of a port by the driver is automatically acknowledged. The derived class can optionally change this behaviour by overriding [process_device_ready\(\)](#), [process_port_ready\(\)](#) and [process_port_open\(\)](#).

This class provides a stream-based interface to access the port data with edge-triggered notification callbacks. If a port receives data from the driver the derived class is notified with the [rx_data_available\(\)](#) callback. The actual data can be retrieved by [port_read\(\)](#). If there was not enough data to be read, the call will return the available partial data. Only then will the [rx_data_available\(\)](#) callback be triggered again.

Data on a port may be transmitted by [port_write\(\)](#). If there were not enough buffers available, only a part of the data will be transmitted. Once there are new buffers available, the [tx_space_available\(\)](#) callback will be invoked. This callback will be called again only after a previous [port_write\(\)](#) was not able to send all requested data.

Use this class as a base to provide your own high-level console device. You must derive from this class as well as `L4::Epiface_t<..., L4virtio::Device>`. For a working device the `irq_iface()` must be registered too. A typical implementation might look like the following:

```
class My_console
: public L4virtio::Svr::Console::Device,
  public L4::Epiface_t<My_console, L4virtio::Device>
{
public:
    My_console(L4Re::Util::Object_registry *r)
        : L4virtio::Svr::Console::Device(0x100)
    {
        init_mem_info(4);
        L4Re::chkcap(r->register_irq_obj(irq_iface()), "virtio notification IRQ");
    }

    void rx_data_available(unsigned port) override
    {
        // call port_read() to fetch available data
    }

    void tx_space_available(unsigned port) override
    {
        // can call port_write() to send (pending) data
    }
};

My_console console(registry);
registry->register_obj(&console, ...);
```

The maximum number of memory regions ([init_mem_info\(\)](#)) should correlate with the number of supported ports.

Definition at line 118 of file [virtio-console-device](#).

16.374.2 Constructor & Destructor Documentation

16.374.2.1 Device() [1/3]

```
L4virtio::Svr::Console::Device::Device (
    unsigned vq_max ) [inline], [explicit]
```

Create a new console device.

Parameters

| | |
|---------------|---|
| <i>vq_max</i> | Maximum number of buffers in data queues. |
|---------------|---|

Create a console device with no multiport support, i.e. control queues are disabled.

Definition at line 145 of file [virtio-console-device](#).

16.374.2.2 Device() [2/3]

```
L4virtio::Svr::Console::Device::Device (
    unsigned vq_max,
    unsigned ports ) [inline], [explicit]
```

Create a new console device.

Parameters

| | |
|---------------|---|
| <i>vq_max</i> | Maximum number of buffers in data queues. |
| <i>ports</i> | Number of ports (maximum 32). |

Create a console device with multiport support, i.e. control queues are enabled.

Definition at line 163 of file [virtio-console-device](#).

16.374.2.3 Device() [3/3]

```
L4virtio::Svr::Console::Device::Device (
    cxx::static_vector< unsigned > const & vq_max_nums ) [inline], [explicit]
```

Create a new console [Device](#).

Parameters

| | |
|--------------------|--|
| <i>vq_max_nums</i> | Maximum number of buffers in data queues, given as a cxx::static_vector with one entry per port. |
|--------------------|--|

Create a console device with multiport support, i.e. control queues are enabled.

Definition at line 182 of file [virtio-console-device](#).

16.374.3 Member Function Documentation**16.374.3.1 notify_queue()**

```
void L4virtio::Svr::Console::Device::notify_queue (
    Virtqueue * queue ) [inline], [override], [virtual]
```

Notify queue of available data.

Parameters

| | |
|--------------|--------------------------------------|
| <i>queue</i> | Virtqueue to notify. |
|--------------|--------------------------------------|

This callback is called whenever data is sent to `queue`. It is the responsibility of the derived class to perform all necessary notification actions, e.g. triggering guest interrupts.

Implements [L4virtio::Svr::Console::Virtio_con](#).

Definition at line 202 of file [virtio-console-device](#).

References [L4VIRTIO_IRQ_STATUS_VRING](#), and [L4virtio::Virtqueue::no_notify_guest\(\)](#).

Here is the call graph for this function:

16.374.3.2 port()

```
Port * L4virtio::Svr::Console::Device::port (
    unsigned port ) [inline], [override], [protected], [virtual]
```

Return the specified port.

Parameters

| | |
|-------------|------------------------------|
| <i>port</i> | Port number. |
|-------------|------------------------------|

Precondition

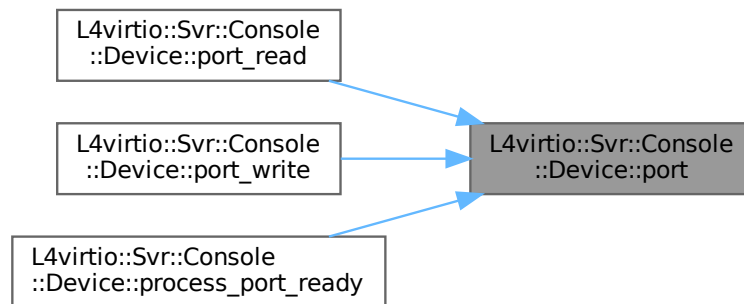

[Port](#) number must be lower than the configured maximum number of ports.

Implements [L4virtio::Svr::Console::Virtio_con](#).

Definition at line 450 of file [virtio-console-device](#).

Referenced by [port_read\(\)](#), [port_write\(\)](#), and [process_port_ready\(\)](#).

Here is the caller graph for this function:

16.374.3.3 port_read()

```

unsigned L4virtio::Svr::Console::Device::port_read (
    char * buf,
    unsigned len,
    unsigned port = 0 ) [inline]
  
```

Read data from port.

Will read up to *len* bytes from *port* into *buf*. Returns the number of bytes read, which may be less if not enough data was available. If all data was read, the [rx_data_available\(\)](#) callback will be invoked the next time the driver queues new data for the port. The callback won't be called again until all data was consumed again.

Parameters

| | |
|-------------|--|
| <i>buf</i> | The destination buffer |
| <i>len</i> | Size of the buffer |
| <i>port</i> | Port index to read data from |

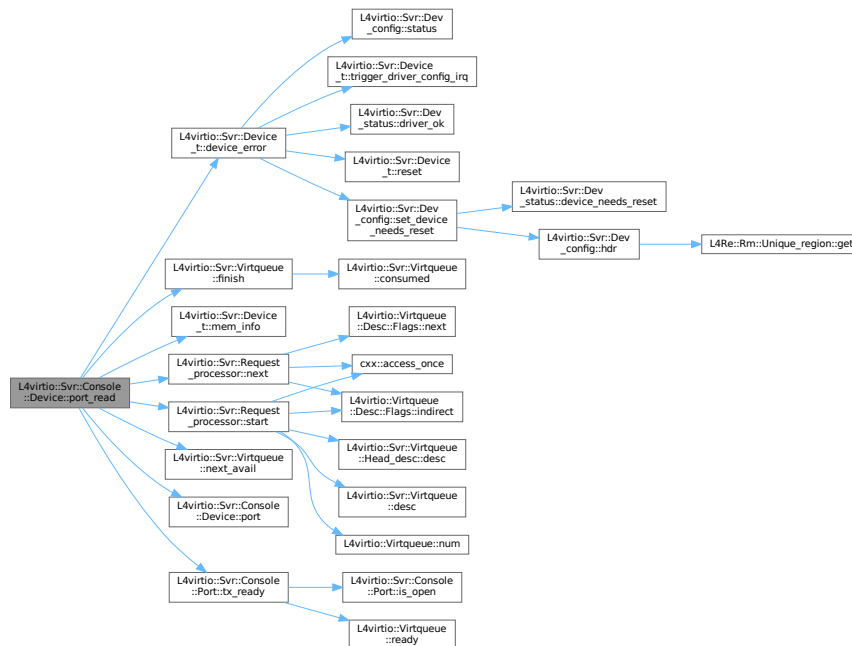

Returns

Number of bytes read

Definition at line 272 of file [virtio-console-device](#).

References [L4virtio::Svr::Device_t< DATA >::device_error\(\)](#), [L4virtio::Svr::Virtqueue::finish\(\)](#), [L4virtio::Svr::Data_buffer::left](#), [L4virtio::Svr::Device_t< DATA >::mem_info\(\)](#), [L4virtio::Svr::Request_processor::next\(\)](#), [L4virtio::Svr::Virtqueue::next_avail\(\)](#), [port\(\)](#), [L4virtio::Svr::Data_buffer::pos](#), [L4virtio::Svr::Console::Device_port::request](#), [L4virtio::Svr::Console::Device_port::rp](#), [L4virtio::Svr::Console::Device_port::src](#), [L4virtio::Svr::Request_processor::start\(\)](#), [L4virtio::Svr::Console::Port::tx](#), and [L4virtio::Svr::Console::Port::tx_ready\(\)](#).

Here is the call graph for this function:

16.374.3.4 port_write()

```
unsigned L4virtio::Svr::Console::Device::port_write (
    char const * buf,
    unsigned len,
    unsigned port = 0 ) [inline]
```

Write data to port.

Will write up to *len* bytes to *port* from *buf*. Returns the number of bytes written, which may be less if not enough virtio buffers were available. If not all data could be written, the [tx_space_available\(\)](#) callback will be invoked the next time the driver queues new receive buffers for the port. The callback won't be called again until all receive buffers were filled again.

Parameters

| | |
|-------------|---|
| <i>buf</i> | The source buffer |
| <i>len</i> | Size of the buffer |
| <i>port</i> | Port index to write data to |

Returns

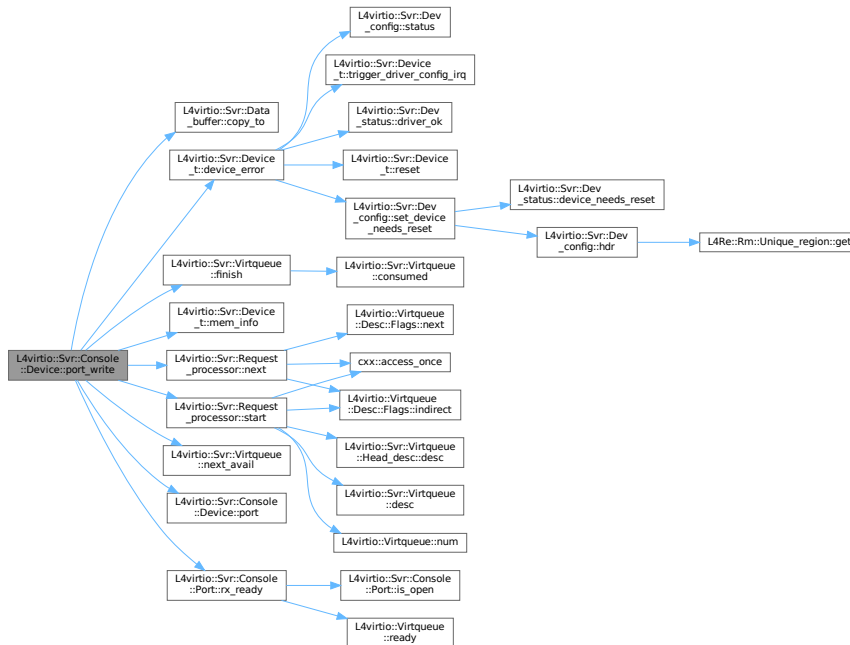

Number of bytes written

Definition at line 341 of file [virtio-console-device](#).

References [L4virtio::Svr::Data_buffer::copy_to\(\)](#), [L4virtio::Svr::Device_t< DATA >::device_error\(\)](#), [L4virtio::Svr::Virtqueue::finish\(\)](#), [L4virtio::Svr::Data_buffer::left](#), [L4virtio::Svr::Device_t< DATA >::mem_info\(\)](#), [L4virtio::Svr::Request_processor::next\(\)](#),

[L4virtio::Svr::Virtqueue::next_avail\(\)](#), [port\(\)](#), [L4virtio::Svr::Data_buffer::pos](#), [L4virtio::Svr::Console::Port::rx](#), [L4virtio::Svr::Console::Port::rx_ready\(\)](#), and [L4virtio::Svr::Request_processor::start\(\)](#).

Here is the call graph for this function:

16.374.3.5 process_device_ready()

```
void L4virtio::Svr::Console::Device::process_device_ready (
    l4_uint16_t value ) [inline], [override], [virtual]
```

Callback called on DEVICE_READY event.

Parameters

| | |
|--------------|--|
| <i>value</i> | The value field of the control message, indicating if the initialization was successful. |
|--------------|--|

By default, this function adds all ports if the driver indicates successful initialization. Override this function to perform custom actions for a DEVICE_READY event. It is then your responsibility to inform the driver about usable ports, see [port_add\(\)](#).

Implements [L4virtio::Svr::Console::Virtio_con](#).

Definition at line 399 of file [virtio-console-device](#).

References [L4virtio::Svr::Console::Virtio_con::port_add\(\)](#).

Here is the call graph for this function:

16.374.3.6 process_port_open()

```
virtual void L4virtio::Svr::Console::Device::process_port_open (
    l4_uint32_t id,
    l4_uint16_t value ) [inline], [virtual]
```

Callback called on PORT_OPEN event.

Parameters

| | |
|--------------|--|
| <i>id</i> | The id field of the control message, i.e. the port number. |
| <i>value</i> | The value field of the control message, indicating if the port was opened or closed. |

The default implementation does nothing. Override it to implement some custom logic to respond to open/close events of the driver.

Implements [L4virtio::Svr::Console::Virtio_con](#).

Definition at line 443 of file [virtio-console-device](#).

16.374.3.7 process_port_ready()

```
void L4virtio::Svr::Console::Device::process_port_ready (
    l4_uint32_t id,
    l4_uint16_t value ) [inline], [override], [virtual]
```

Callback called on PORT_READY event.

Parameters

| | |
|--------------|--|
| <i>id</i> | The id field of the control message, i.e. the port number. |
| <i>value</i> | The value field of the control message, indicating if the initialization was successful. |

By default, this function opens the port if the driver is ready. Otherwise, the port is removed if the driver failed to set it up correctly. Override this function to perform custom actions for a PORT_READY event, *after* the generic management of the base class. It is then your responsibility to inform the driver about connected or unusable ports. See [port_open\(\)](#) and [port_remove\(\)](#).

Reimplemented from [L4virtio::Svr::Console::Virtio_con](#).

Definition at line 422 of file [virtio-console-device](#).

References [port\(\)](#), [L4virtio::Svr::Console::Port::Port_failed](#), [L4virtio::Svr::Console::Virtio_con::port_open\(\)](#), [L4virtio::Svr::Console::Port::Port_ready](#), [L4virtio::Svr::Console::Virtio_con::port_remove\(\)](#), [L4virtio::Svr::Console::Virtio_con::process](#), and [L4virtio::Svr::Console::Port::status](#).

Here is the call graph for this function:

16.377.1 Detailed Description

Representation of a Virtio console port.

Each port consists of a pair of queues for sending and receiving.

A port may be added and removed at runtime when the multi-port feature is enabled. The states are as follows:

Definition at line 109 of file [virtio-console](#).

16.377.2 Member Enumeration Documentation

16.377.2.1 Port_status

```
enum L4virtio::Svr::Console::Port::Port_status
```

Possible states of a virtio console port.

Enumerator

| | |
|-----------------|---|
| Port_disabled | Reset state, waiting for port to be added. |
| Port_added | Port has been added by device, waiting for ready message. |
| Port_ready | Port is ready but still closed. |
| Port_open | Port is in a working state. |
| Port_failed | Device failure, port unusable. |
| Port_num_states | Number of port states. Must be last. |

Definition at line 114 of file [virtio-console](#).

16.377.3 Field Documentation

16.377.3.1 state_transitions

```
constexpr Transition L4virtio::Svr::Console::Port::state_transitions[Port_num_states][Port_num_states]
[static], [constexpr]
```

State transition table from last report state to current state.

Not all transitions can be made directly. For example, if the last reported state was `Port_disabled` and the current state is `Port_open`, the device has to send two messages: `Control_message::Device_add` and `Control_message::Port_open`. This is expressed by going through an intermediate state (`Port_ready`) on the reporting side.

For the purpose of the driver there are only three coarse states:

1. The port does not exist (`Port_disabled`).
2. The port exists but is closed on the device side (`Port_added`, `Port_ready`, `Port_failed`).
3. The port exists and is open on the device side (`Port_open`).

The state transition table with `Port_added`, `Port_ready` and `Port_failed` as current state are thus identical.

Definition at line 195 of file [virtio-console](#).

The documentation for this struct was generated from the following file:

| + | event |
| + | value |
| + | next |
| | |

Data Fields

- [I4_int16_t](#) **event**
Control_message::Events or <0 if no event is sent.
- [I4_uint16_t](#) **value**
Extra information.
- [Port_status](#) **next**
Next Port_status state.

16.378.1 Detailed Description

State transition from last report state to current state.

Definition at line 169 of file [virtio-console](#).

The documentation for this struct was generated from the following file:

- l4/l4virtio/server/virtio-console

16.379 L4virtio::Svr::Console::Virtio_con Class Reference

Base class implementing a virtio console functionality.

```
#include <virtio-console>
```

Inheritance diagram for L4virtio::Svr::Console::Virtio_con:

- Return true if the multiport feature is enabled and control queues are available.*

 - bool **check_features** (void) override
callback for checking the subset of accepted features
 - bool **check_queues** () override
callback for checking if the queues at DRIVER_OK transition
 - int **port_add** (unsigned idx)
Send a DEVICE_ADD message and update the internal state.
 - int **port_remove** (unsigned idx)
Send a DEVICE_REMOVE message and update the internal state.
 - int **port_open** (unsigned idx, bool open)
Send a PORT_OPEN message and update the internal state.
 - int **port_name** (unsigned idx, char const *name)
Send a PORT_NAME message to announce the port name.
 - int **send_control_message** (l4_uint32_t idx, l4_uint16_t event, l4_uint16_t value=0, const char *name=0)
Send control message to driver.
 - int **handle_control_message** ()
Handle control message received from the driver.
 - void **reset** () override
reset callback, called for doing a device reset
 - virtual void **reset_device** ()
Reset the state of the actual console device.
 - virtual void **notify_queue** (Virtqueue *queue)=0
Notify queue of available data.
 - virtual Port * **port** (unsigned port)=0
Return the specified port.
 - virtual void **process_device_ready** (l4_uint16_t value)=0
Callback called on DEVICE_READY event.
 - virtual void **process_port_ready** (l4_uint32_t id, l4_uint16_t value)
Callback called on PORT_READY event.
 - virtual void **process_port_open** (l4_uint32_t id, l4_uint16_t value)=0
Callback called on PORT_OPEN event.

Public Member Functions inherited from L4virtio::Svr::Device_t< DATA >

- virtual void **cfg_changed** (unsigned)
callback for client device configuration changes
- virtual void **register_single_driver_irq** ()
callback for registering a single guest IRQ for all queues (old-style)
- virtual void **trigger_driver_config_irq** ()=0
callback for triggering configuration change notification IRQ
- virtual L4::Cap< L4::Irq > **device_notify_irq** () const
callback to gather the device notification IRQ (old-style)
- virtual void **register_driver_irq** (unsigned idx)
Callback for registering an notification IRQ (multi IRQ).
- virtual L4::Cap< L4::Irq > **device_notify_irq** (unsigned idx)
Callback to gather the device notification IRQ (multi IRQ).
- virtual unsigned **num_events_supported** () const
Return the highest notification index supported.
- **Device_t** (Dev_config *dev_config)
Make a device for the given config.

- `Mem_list const * mem_info () const`
Get the memory region list used for this device.
- `void reset_queue_config (unsigned idx, unsigned num_max, bool inc_generation=false)`
Trigger reset for the configuration space for queue idx.
- `void init_mem_info (unsigned num)`
Initialize the memory region list to the given maximum.
- `void device_error ()`
Transition device into DEVICE_NEEDS_RESET state.
- `bool setup_queue (Virtqueue *q, unsigned qn, unsigned num_max)`
Enable/disable the specified queue.
- `bool handle_mem_cmd_write ()`
Check for a value in the cmd register and handle a write.
- `void enable_trusted_ds_validation ()`
Enable trusted dataspace validation.
- `void add_trusted_dataspaces (std::shared_ptr< Ds_vector const > ds)`
Provide a list of trusted dataspace that can be used for validation.

Additional Inherited Members

Protected Attributes inherited from `L4virtio::Svr::Device_t< DATA >`

- `Mem_list _mem_info`
Memory region list.

16.379.1 Detailed Description

Base class implementing a virtio console functionality.

It is possible to activate the MULTIPORT feature, in which case incoming control messages need to be dispatched by calling `handle_control_message()`. The derived class must additionally override `process_device_ready()`, `process_port_ready()` and `process_port_open()` to implement the actual behaviour. The derived class has the following responsibilities:

- inform the driver about usable ports once the device is ready as signaled in `process_device_ready()`, see the wrapper `port_add()`.
- inform the driver about unusable ports, see the wrapper `port_remove()`.
- react to open/close events, see the wrapper `port_open()`.

This implementation provides no means to handle interrupts or notify guests, therefore derived classes have to provide this functionality, see `notify_queue()` and `handle_control_message()`. Similarly, all interaction with data queues has to be implemented. Memory for port structures must be managed by the implementor as well.

Use this class as a base to implement your own specific console device.

Definition at line 267 of file `virtio-console`.

16.379.2 Constructor & Destructor Documentation

16.379.2.1 Virtio_con()

```
L4virtio::Svr::Console::Virtio_con::Virtio_con (
    unsigned max_ports,
    bool enable_multiport ) [inline], [explicit]
```

Create a new multiport console device.

Parameters

| | |
|-------------------------|--|
| <i>max_ports</i> | Maximum number of ports the device should be able to handle (ignored when <code>enable_multiport</code> is false). |
| <i>enable_multiport</i> | Enable the control queue for dynamic handling of ports. |

Definition at line 293 of file [virtio-console](#).

References [L4Re::chksys\(\)](#), [L4virtio::Svr::Console::Features::console_multiport\(\)](#), [L4_EINVAL](#), and [L4virtio::Svr::Dev_features::raw](#).

Here is the call graph for this function:

16.379.3 Member Function Documentation

16.379.3.1 handle_control_message()

```
int L4virtio::Svr::Console::Virtio_con::handle_control_message ( ) [inline]
```

Handle control message received from the driver.

Return values

| | |
|-------------------|---------------------------------------|
| <i>L4_EOK</i> | Message has been handled. |
| <i>-L4_ENODEV</i> | Control queue is not ready. |
| <i>-L4_EINVAL</i> | Received an unexpected control event. |

This function performs the basic handling of control messages from the driver. It does all necessary work with the control queues and performs some sanity checks. All other work is deferred to the derived class, see [process_device_ready\(\)](#), [process_port_ready\(\)](#) and [process_port_open\(\)](#).

Definition at line 536 of file [virtio-console](#).

References [L4virtio::Svr::Console::Control_message::Device_ready](#), [L4virtio::Svr::Console::Control_message::event](#), [L4virtio::Svr::Virtqueue::finish\(\)](#), [L4virtio::Svr::Console::Control_message::id](#), [L4_EINVAL](#), [L4_ENODEV](#), [L4_EOK](#), [L4virtio::Svr::Console::Control_request::len](#), [L4virtio::Svr::Console::Control_request::msg](#), [L4virtio::Svr::Virtqueue::next_avail\(\)](#), [L4virtio::Svr::Console::Port::Port_disabled](#), [L4virtio::Svr::Console::Control_message::Port_open](#), [L4virtio::Svr::Console::Port::Port_op](#), [L4virtio::Svr::Console::Control_message::Port_ready](#), [process_device_ready\(\)](#), [process_port_open\(\)](#), [process_port_ready\(\)](#), [L4virtio::Virtqueue::ready\(\)](#), [L4virtio::Svr::Request_processor::start\(\)](#), [L4virtio::Svr::Console::Port::status](#), [L4virtio::Svr::Console::Port](#) and [L4virtio::Svr::Console::Control_message::value](#).

Here is the call graph for this function:

16.379.3.2 notify_queue()

```
virtual void L4virtio::Svr::Console::Virtio_con::notify_queue (
    Virtqueue * queue ) [pure virtual]
```

Notify queue of available data.

Parameters

| | |
|--------------------|-----------------------------------|
| <code>queue</code> | <code>Virtqueue</code> to notify. |
|--------------------|-----------------------------------|

This callback is called whenever data is sent to `queue`. It is the responsibility of the derived class to perform all necessary notification actions, e.g. triggering guest interrupts.

Implemented in `L4virtio::Svr::Console::Device`.

16.379.3.3 port()

```
virtual Port * L4virtio::Svr::Console::Virtio_con::port (
    unsigned port ) [pure virtual]
```

Return the specified port.

Parameters

| | |
|-------------|------------------------------|
| <i>port</i> | Port number. |
|-------------|------------------------------|

Precondition

[Port](#) number must be lower than the configured maximum number of ports.

Implemented in [L4virtio::Svr::Console::Device](#).

Referenced by [check_queues\(\)](#), [port_add\(\)](#), [port_name\(\)](#), [port_open\(\)](#), [port_remove\(\)](#), [process_port_ready\(\)](#), and [reset\(\)](#).

Here is the caller graph for this function:

16.379.3.4 port_add()

```
int L4virtio::Svr::Console::Virtio_con::port_add (
    unsigned idx ) [inline]
```

Send a `DEVICE_ADD` message and update the internal state.

Parameters

| | |
|------------|--|
| <i>idx</i> | Port that should be added. |
|------------|--|

Return values

| | |
|------------------------|---------------------------|
| <code>L4_EOK</code> | Message has been sent. |
| <code>-L4_EPERM</code> | Invalid state transition. |

Precondition

`idx` must be smaller than the configured number of ports.

`Port` must not already exist.

Definition at line 379 of file [virtio-console](#).

References [L4_EOK](#), [L4_EPERM](#), [port\(\)](#), [L4virtio::Svr::Console::Port::Port_added](#), [L4virtio::Svr::Console::Port::Port_disabled](#), and [L4virtio::Svr::Console::Port::status](#).

Here is the call graph for this function:

Here is the caller graph for this function:

**16.379.3.5 port_name()**

```
int L4virtio::Svr::Console::Virtio_con::port_name (
    unsigned idx,
    char const * name ) [inline]
```

Send a PORT_NAME message to announce the port name.

Parameters

| | |
|-------------|---|
| <i>idx</i> | Port that should be opened or closed. |
| <i>name</i> | The port name |

Return values

| | |
|---------------|------------------------|
| <i>L4_EOK</i> | Message has been sent. |
|---------------|------------------------|

Return values

| | |
|-----------|--|
| -L4_EPERM | Control message is not allowed in the current state. |
|-----------|--|

Returns

Errors from [send_control_message\(\)](#)

Precondition

`idx` must be smaller than the configured number of ports.

[Port](#) must already exist.

Definition at line 455 of file [virtio-console](#).

References [L4_EPERM](#), [port\(\)](#), [L4virtio::Svr::Console::Port::Port_disabled](#), [L4virtio::Svr::Console::Control_message::Port_name](#), [send_control_message\(\)](#), and [L4virtio::Svr::Console::Port::status](#).

Here is the call graph for this function:

16.379.3.6 port_open()

```
int L4virtio::Svr::Console::Virtio_con::port_open (
    unsigned idx,
    bool open ) [inline]
```

Send a PORT_OPEN message and update the internal state.

Parameters

| | |
|-------------|---|
| <i>idx</i> | Port that should be opened or closed. |
| <i>open</i> | Open or close port. |

Return values

| | |
|------------------------|---------------------------|
| <code>L4_EOK</code> | Message has been sent. |
| <code>-L4_EPERM</code> | Invalid state transition. |

Precondition

`idx` must be smaller than the configured number of ports.

[Port](#) must be ready when opening or open when closing.

Definition at line 428 of file [virtio-console](#).

References [L4_EOK](#), [L4_EPERM](#), [port\(\)](#), [L4virtio::Svr::Console::Port::Port_open](#), [L4virtio::Svr::Console::Port::Port_ready](#), and [L4virtio::Svr::Console::Port::status](#).

Referenced by [L4virtio::Svr::Console::Device::process_port_ready\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.379.3.7 port_remove()

```
int L4virtio::Svr::Console::Virtio_con::port_remove (
    unsigned idx ) [inline]
```

Send a `DEVICE_REMOVE` message and update the internal state.

Parameters

| | |
|------------------|--|
| <code>idx</code> | Port that should be removed. |
|------------------|--|

Return values

| | |
|------------------------|---------------------------|
| <code>L4_EOK</code> | Message has been sent. |
| <code>-L4_EPERM</code> | Invalid state transition. |

Precondition

`idx` must be smaller than the configured number of ports.

`Port` must already exist.

Definition at line 403 of file `virtio-console`.

References `L4_EOK`, `L4_EPERM`, `port()`, `L4virtio::Svr::Console::Port::Port_disabled`, and `L4virtio::Svr::Console::Port::status`.

Referenced by `L4virtio::Svr::Console::Device::process_port_ready()`.

Here is the call graph for this function:

Here is the caller graph for this function:

16.379.3.8 process_device_ready()

```
virtual void L4virtio::Svr::Console::Virtio_con::process_device_ready (  
    l4_uint16_t value ) [pure virtual]
```

Callback called on `DEVICE_READY` event.

Parameters

| | |
|--------------------|--|
| <code>value</code> | The value field of the control message, indicating if the initialization was successful. |
|--------------------|--|

Needs to be overridden by the derived class if the MULTIPOINT feature is enabled. Control messages may be sent only after the driver has successfully initialized the device.

Implemented in [L4virtio::Svr::Console::Device](#).

Referenced by [handle_control_message\(\)](#).

Here is the caller graph for this function:

16.379.3.9 process_port_open()

```
virtual void L4virtio::Svr::Console::Virtio_con::process_port_open (
    14_uint32_t id,
    14_uint16_t value ) [pure virtual]
```

Callback called on PORT_OPEN event.

Parameters

| | |
|--------------|--|
| <i>id</i> | The id field of the control message, i.e. the port number. |
| <i>value</i> | The value field of the control message, indicating if the port was opened or closed. |

Signal that an application has opened the port. Can to be overridden by the derived class if the MULTIPOINT feature is enabled.

Implemented in [L4virtio::Svr::Console::Device](#).

Referenced by [handle_control_message\(\)](#).

Here is the caller graph for this function:

16.379.3.10 process_port_ready()

```
virtual void L4virtio::Svr::Console::Virtio_con::process_port_ready (
    l4_uint32_t id,
    l4_uint16_t value ) [inline], [virtual]
```

Callback called on PORT_READY event.

Parameters

| | |
|--------------|--|
| <i>id</i> | The id field of the control message, i.e. the port number. |
| <i>value</i> | The value field of the control message, indicating if the initialization was successful. |

May be overridden by the derived class if the MULTIPORT feature is enabled. This default implementation just sets the status of the port according to the driver message.

Reimplemented in [L4virtio::Svr::Console::Device](#).

Definition at line 698 of file [virtio-console](#).

References [port\(\)](#), [L4virtio::Svr::Console::Port::Port_added](#), [L4virtio::Svr::Console::Port::Port_failed](#), [L4virtio::Svr::Console::Port::Port_ready](#), and [L4virtio::Svr::Console::Port::status](#).

Referenced by [handle_control_message\(\)](#), and [L4virtio::Svr::Console::Device::process_port_ready\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.379.3.11 reset_device()

```
virtual void L4virtio::Svr::Console::Virtio_con::reset_device ( ) [inline], [virtual]
```

Reset the state of the actual console device.

This callback is called at the end of `reset()`, allowing the derived class to reset internal state.

Definition at line 652 of file `virtio-console`.

Referenced by `reset()`.

Here is the caller graph for this function:

**16.379.3.12 send_control_message()**

```
int L4virtio::Svr::Console::Virtio_con::send_control_message (
    l4_uint32_t idx,
    l4_uint16_t event,
    l4_uint16_t value = 0,
    const char * name = 0 ) [inline]
```

Send control message to driver.

Parameters

| | |
|--------------|---------------------------------------|
| <i>idx</i> | Port number. |
| <i>event</i> | Kind of control event. |
| <i>value</i> | Extra information for the event. |
| <i>name</i> | Name to be used for Port_name message |

Return values

| | |
|-------------------|---|
| <i>L4_EOK</i> | Message has been sent. |
| <i>-L4_ENODEV</i> | Control queue is not ready. |
| <i>-L4_EBUSY</i> | Currently no descriptor available in the control queue. |
| <i>-L4_ENOMEM</i> | Client-issued descriptor too small. Device will be set to failed state. |

Precondition

`port` must be smaller than the configured number of ports.

The convenience functions `port_add()`, `port_remove()` and `port_open()` should cover the most use cases and are the preferred way of communication with the driver. If you use this function directly, it is your responsibility to guarantee no invalid control messages are sent to the driver.

Definition at line 487 of file `virtio-console`.

References `L4virtio::Svr::Virtqueue::finish()`, `L4_EBUSY`, `L4_ENODEV`, `L4_ENOMEM`, `L4_EOK`, `L4virtio::Svr::Console::Control_request::msg`, `L4virtio::Svr::Virtqueue::next_avail()`, `L4virtio::Svr::Console::Control_message::Port_name`, `L4virtio::Virtqueue::ready()`, `L4virtio::Svr::Console::Port::rx`, and `L4virtio::Svr::Request_processor::start()`.

Referenced by `port_name()`.

16.380 L4virtio::Svr::Data_buffer Struct Reference

Abstract data buffer.

```
#include <virtio>
```

Inheritance diagram for L4virtio::Svr::Data_buffer:

Collaboration diagram for L4virtio::Svr::Data_buffer:

Public Member Functions

- `template<typename T >`
`Data_buffer` (`T *p`)
Create buffer for object `p`.
- `template<typename T >`
`void set` (`T *p`)
Set buffer for object `p`.
- `l4_uint32_t copy_to` (`Data_buffer *dst`, `l4_uint32_t max=UINT_MAX`)
Copy contents from this buffer to the destination buffer.
- `l4_uint32_t skip` (`l4_uint32_t bytes`)
Skip given number of bytes in this buffer.
- `bool done` () `const`
Check if there are no more bytes left in the buffer.

Data Fields

- `char * pos`
Current buffer position.
- `l4_uint32_t left`
Bytes left in buffer.

16.380.1 Detailed Description

Abstract data buffer.

Definition at line 306 of file [virtio](#).

16.380.2 Constructor & Destructor Documentation

16.380.2.1 Data_buffer()

```
template<typename T >
L4virtio::Svr::Data_buffer::Data_buffer (
    T * p ) [inline], [explicit]
```

Create buffer for object `p`.

Template Parameters

| | |
|----------------|---------------------------|
| <code>T</code> | Type of object (implicit) |
|----------------|---------------------------|

Parameters

| | |
|----------------|--------------------|
| <code>p</code> | Pointer to object. |
|----------------|--------------------|

The buffer shall point to the start of the object `p` and the size left is `sizeof(T)`.

Definition at line 323 of file [virtio](#).

16.380.3 Member Function Documentation

16.380.3.1 copy_to()

```
l4_uint32_t L4virtio::Svr::Data_buffer::copy_to (
    Data_buffer * dst,
    l4_uint32_t max = UINT_MAX ) [inline]
```

Copy contents from this buffer to the destination buffer.

Parameters

| | |
|------------|---|
| <i>dst</i> | Destination buffer. |
| <i>max</i> | (optional) Maximum number of bytes to copy. |

Returns

the number of bytes copied.

This function copies at most `max` bytes from this to `dst`. If `max` is omitted, copies the maximum number of bytes available that fit `dst`.

Definition at line 354 of file [virtio](#).

References [left](#), and [pos](#).

**16.380.3.3 set()**

```
template<typename T >
void L4virtio::Svr::Data_buffer::set (
    T * p ) [inline]
```

Set buffer for object `p`.

Template Parameters

| | |
|----------|---------------------------|
| <i>T</i> | Type of object (implicit) |
|----------|---------------------------|

Parameters

| | |
|----------|--------------------|
| <i>p</i> | Pointer to object. |
|----------|--------------------|

The buffer shall point to the start of the object `p` and the size left is `sizeof(T)`.

Definition at line 337 of file [virtio](#).

References [left](#), and [pos](#).

16.380.3.4 skip()

```
l4_uint32_t L4virtio::Svr::Data_buffer::skip (
    l4_uint32_t bytes ) [inline]
```

Skip given number of bytes in this buffer.

Parameters

| | |
|--------------|--|
| <i>bytes</i> | Number of bytes that shall be skipped. |
|--------------|--|

Returns

The number of bytes skipped.

Try to skip the given number of bytes in this buffer, if there are less bytes left in the buffer that given then at most left bytes are skipped and the amount is returned.

Definition at line 375 of file [virtio](#).

References [left](#), and [pos](#).

Public Member Functions

- [Dev_config](#) ([l4_uint32_t](#) vendor, [l4_uint32_t](#) device, unsigned cfg_size, [l4_uint32_t](#) num_queues=0)
Create a L4-Virtio config data space.
- [Dev_config](#) (Cfg_cap const &cfg, [l4_addr_t](#) cfg_offset, [l4_uint32_t](#) vendor, [l4_uint32_t](#) device, unsigned cfg_size, [l4_uint32_t](#) num_queues=0)
Setup an L4-Virtio config space in an existing data space.
- [l4_uint32_t num_queues](#) () const
Return the number of queues currently usable.
- [l4_uint32_t guest_features](#) (unsigned idx) const
Return a specific set of guest features.
- [l4_uint32_t negotiated_features](#) (unsigned idx) const
Compute a specific set of negotiated features.
- [Status status](#) () const
Get current device status (trusted).
- [l4_uint32_t get_cmd](#) () const
Get the value from the cmd register.
- void [reset_cmd](#) ()
Reset the cmd register after execution of a command.
- void [set_status](#) ([Status status](#))
Set device status register.
- void [add_irq_status](#) ([l4_uint32_t](#) status)
Adds irq status bit.
- void [set_device_needs_reset](#) ()
Set DEVICE_NEEDS_RESET bit in device status register.

- bool [change_queue_config](#) ([l4_uint32_t](#) num_queues)
Setup new queue configuration.
- [l4virtio_config_queue_t](#) volatile const * [qconfig](#) (unsigned index) const
Get queue read-only config data for queue with the given index.
- void [reset_hdr](#) (bool inc_generation=false) const
Reset the config header to the initial contents.
- bool [reset_queue](#) (unsigned index, unsigned num_max, bool inc_generation=false) const
Reset queue config for the given queue.
- [l4virtio_config_hdr_t](#) const volatile * [hdr](#) () const
Get a read-only pointer to the config header.
- [L4::Cap](#)< [L4Re::Dataspace](#) > [ds](#) () const
Get data-space capability for the shared config data space.
- [l4_addr_t](#) [ds_offset](#) () const
Return the offset into the config dataspace where the device configuration starts.

16.381.1 Detailed Description

Abstraction for L4-Virtio device config memory.

Virtio defines a device configuration mechanism, L4-Virtio implements this mechanism based on shared memory a [set_status\(\)](#) and a [config_queue\(\)](#) call. This class provides an abstraction for L4-Virtio host implementations to establish such a shared memory data space and providing the necessary contents and access functions.

Definition at line 52 of file [l4virtio](#).

16.381.2 Constructor & Destructor Documentation

16.381.2.1 Dev_config() [1/2]

```
L4virtio::Svr::Dev_config::Dev_config (
    l4\_uint32\_t vendor,
    l4\_uint32\_t device,
    unsigned cfg_size,
    l4\_uint32\_t num_queues = 0 ) [inline]
```

Create a L4-Virtio config data space.

Parameters

| | |
|-------------------|---|
| <i>vendor</i> | The vendor ID to store in config header. |
| <i>device</i> | The device ID to store in config header. |
| <i>cfg_size</i> | The size of the device-specific config data in bytes. |
| <i>num_queues</i> | The number of queues provided by the device. |

This constructor allocates a data space used for L4-virtio config attaches the data space to the local address space and writes the initial contents to the config header.

Definition at line 112 of file [l4virtio](#).

References [L4Re::chkcap\(\)](#), [L4Re::chksys\(\)](#), [L4Re::Env::env\(\)](#), and [L4_PAGESIZE](#).

Here is the call graph for this function:

16.381.2.2 Dev_config() [2/2]

```

L4virtio::Svr::Dev_config::Dev_config (
    Cfg_cap const & cfg,
    l4_addr_t cfg_offset,
    l4_uint32_t vendor,
    l4_uint32_t device,
    unsigned cfg_size,
    l4_uint32_t num_queues = 0 ) [inline]

```

Setup an L4-Virtio config space in an existing data space.

Parameters

| | |
|-------------------|---|
| <i>cfg</i> | Dataspace that should hold the L4-Virtio configuration. |
| <i>cfg_offset</i> | Offset into the dataspace where the configuration starts. |
| <i>vendor</i> | The vendor ID to store in config header. |
| <i>device</i> | The device ID to store in config header. |
| <i>cfg_size</i> | The size of the device-specific config data in bytes. |
| <i>num_queues</i> | The number of queues provided by the device. |

16.381.3 Member Function Documentation

16.381.3.1 add_irq_status()

```

void L4virtio::Svr::Dev_config::add_irq_status (
    l4_uint32_t status ) [inline]

```

Adds irq status bit.

Parameters

| | |
|---------------|--|
| <i>status</i> | The value to add to the irq status register. |
|---------------|--|

This function adds the status bit to the irq status register.

Definition at line 265 of file [l4virtio](#).

References [hdr\(\)](#), and [status\(\)](#).

Here is the call graph for this function:

16.381.3.2 change_queue_config()

```
bool L4virtio::Svr::Dev_config::change_queue_config (
    l4_uint32_t num_queues ) [inline]
```

Setup new queue configuration.

Parameters

| | |
|-------------------|--|
| <i>num_queues</i> | The number of queues provided by the device. |
|-------------------|--|

Definition at line 286 of file [l4virtio](#).

References [L4_PAGESIZE](#), [num_queues\(\)](#), and [reset_hdr\(\)](#).

Here is the call graph for this function:

16.381.3.3 ds()

```
L4::Cap< L4Re::Dataspace > L4virtio::Svr::Dev_config::ds ( ) const [inline]
```

Get data-space capability for the shared config data space.

Returns

Capability for the shared config data space.

Definition at line 375 of file [l4virtio](#).

16.381.3.4 get_cmd()

```
l4_uint32_t L4virtio::Svr::Dev_config::get_cmd ( ) const [inline]
```

Get the value from the `cmd` register.

Note, the most significant eight bits are the command (0 is nothing to do). The upper eight bit are reset to zero after the command was handled.

Definition at line 230 of file [l4virtio](#).

References [hdr\(\)](#).

Referenced by [L4virtio::Svr::Device_t< DATA >::handle_mem_cmd_write\(\)](#).

**16.381.3.5 guest_features()**

```
l4_uint32_t L4virtio::Svr::Dev_config::guest_features (
    unsigned idx ) const [inline]
```

Return a specific set of guest features.

16.381.3.7 negotiated_features()

```
l4_uint32_t L4virtio::Svr::Dev_config::negotiated_features (
    unsigned idx ) const [inline]
```

Compute a specific set of negotiated features.

Parameters

| | |
|------------|---|
| <i>idx</i> | Index into the guest/host features array. |
|------------|---|

Return values

| | |
|------------|--------------------------------------|
| <i>The</i> | selected set of negotiated features. |
|------------|--------------------------------------|

This function returns a specific 32-bit set of features negotiated by the guest/driver and host/device. *idx* is the index in the guest/host features array, resp. the 32-bit set to return.

Definition at line 212 of file [l4virtio](#).

16.381.3.8 qconfig()

```
l4virtio_config_queue_t volatile const * L4virtio::Svr::Dev_config::qconfig (
    unsigned index ) const [inline]
```

Get queue read-only config data for queue with the given *index*.

Parameters

| | |
|--------------|-------------------------|
| <i>index</i> | The index of the queue. |
|--------------|-------------------------|

Returns

Read-only pointer to the config of the queue with the given *index*, or NULL if *index* is out of range.

Definition at line 303 of file [l4virtio](#).

References [L4Re::Rm::Unique_region< T >::get\(\)](#), and [L4_UNLIKELY](#).

16.381.3.10 reset_queue()

```
bool L4virtio::Svr::Dev_config::reset_queue (
    unsigned index,
    unsigned num_max,
    bool inc_generation = false ) const [inline]
```

Reset queue config for the given queue.

Parameters

| | |
|-----------------------|--|
| <i>index</i> | The index of the queue to reset. |
| <i>num_max</i> | The maximum number of descriptors supported by this queue. |
| <i>inc_generation</i> | The config generation will be incremented when this is true. |

Returns

true on success, or false when *index* is out of range.

Definition at line 345 of file [l4virtio](#).

References [L4_UNLIKELY](#), [l4virtio_config_queue_t::num](#), [l4virtio_config_queue_t::num_max](#), [qconfig\(\)](#), and [l4virtio_config_queue_t::ready](#).

Here is the caller graph for this function:

16.381.3.12 set_status()

```
void L4virtio::Svr::Dev_config::set_status (
    Status status ) [inline]
```

Set device status register.

Parameters

| | |
|---------------|---|
| <i>status</i> | The new value for the device status register. |
|---------------|---|

This function sets the internal status register and also the status register in the shared memory to *status*.

Definition at line 253 of file [l4virtio](#).

References [hdr\(\)](#), [L4virtio::Svr::Dev_status::raw](#), and [status\(\)](#).

Here is the call graph for this function:

16.381.3.13 status()

```
Status L4virtio::Svr::Dev_config::status ( ) const [inline]
```

Get current device status (trusted).

Returns

Current device status register (trusted).

The status returned by this function is value stored internally and cannot be written by the guest (i.e., the value can be taken as trusted).

Definition at line 222 of file [l4virtio](#).

Referenced by [add_irq_status\(\)](#), [L4virtio::Svr::Device_t< DATA >::device_error\(\)](#), and [set_status\(\)](#).

Memory region list.

16.384.1 Detailed Description

```
template<typename DATA>
class L4virtio::Svr::Device_t< DATA >
```

Server-side L4-VIRTIO device stub.

This stub supports new-style multi-event registration (using [get_device_config\(\)](#), [bind\(\)](#) and [get_device_notification_irq\(\)](#)).

Definition at line [795](#) of file [l4virtio](#).

16.384.2 Member Function Documentation

16.384.2.1 [add_trusted_dataspaces\(\)](#)

```
template<typename DATA >
void L4virtio::Svr::Device_t< DATA >::add_trusted_dataspaces (
    std::shared_ptr< Ds_vector const > ds ) [inline]
```

Provide a list of trusted dataspaces that can be used for validation.

Parameters

| | |
|-----------|-----------------------------|
| <i>ds</i> | list of trusted dataspaces. |
|-----------|-----------------------------|

Definition at line 1192 of file l4virtio.

16.384.2.2 device_error()

```
template<typename DATA >
void L4virtio::Svr::Device_t< DATA >::device_error ( ) [inline]
```

Transition device into DEVICE_NEEDS_RESET state.

This function does a full reset, sets the DEVICE_NEEDS_RESET bit in the device status register, triggering a guest config IRQ if necessary. The driver still needs to perform its own reset and initialization sequence.

Definition at line 1018 of file l4virtio.

References [L4virtio::Svr::Dev_status::driver_ok\(\)](#), [L4virtio::Svr::Device_t< DATA >::reset\(\)](#), [L4virtio::Svr::Dev_config::set_device_needs_reset\(\)](#), [L4virtio::Svr::Dev_config::status\(\)](#), and [L4virtio::Svr::Device_t< DATA >::trigger_driver_config_irq\(\)](#).

16.384.2.3 device_notify_irq()

```
template<typename DATA >
virtual L4::Cap< L4::Irq > L4virtio::Svr::Device_t< DATA >::device_notify_irq (
    unsigned idx ) [inline], [virtual]
```

Callback to gather the device notification IRQ (multi IRQ).

The default implementation maps to the implementation for single IRQ notification points.

Definition at line 868 of file [l4virtio](#).

References [L4Re::chksys\(\)](#), [L4virtio::Svr::Device_t< DATA >::device_notify_irq\(\)](#), and [L4_ENOSYS](#).

Here is the call graph for this function:

16.384.2.4 handle_mem_cmd_write()

```
template<typename DATA >
bool L4virtio::Svr::Device_t< DATA >::handle_mem_cmd_write ( ) [inline]
```

Check for a value in the `cmd` register and handle a write.

This function checks for a value in the `cmd` register and executes the command if there is any, or returns false if there was no command.

Execution of the command is signaled by a zero in the `cmd` register.

Definition at line 1148 of file [l4virtio](#).

References [L4virtio::Svr::Device_t< DATA >::cfg_changed\(\)](#), [L4virtio::Svr::Dev_config::get_cmd\(\)](#), [L4_LIKELY](#), [L4VIRTIO_CMD_CFG_CHANGED](#), [L4VIRTIO_CMD_CFG_QUEUE](#), [L4VIRTIO_CMD_MASK](#), [L4VIRTIO_CMD_SET_STATUS](#), [L4virtio::Svr::Device_t< DATA >::reconfig_queue\(\)](#), and [L4virtio::Svr::Dev_config::reset_cmd\(\)](#).

16.384.2.6 register_driver_irq()

```
template<typename DATA >
virtual void L4virtio::Svr::Device\_t< DATA >::register\_driver\_irq (
    unsigned idx ) [inline], [virtual]
```

Callback for registering an notification IRQ (multi IRQ).

The default implementation maps to the implementation for single IRQ notification points.

Definition at line 854 of file [l4virtio](#).

References [L4Re::chksys\(\)](#), [L4_ENOSYS](#), and [L4virtio::Svr::Device_t< DATA >::register_single_driver_irq\(\)](#).

Here is the call graph for this function:

16.384.2.7 reset_queue_config()

```
template<typename DATA >
void L4virtio::Svr::Device\_t< DATA >::reset\_queue\_config (
    unsigned idx,
    unsigned num_max,
    bool inc_generation = false ) [inline]
```

Trigger reset for the configuration space for queue *idx*.

Parameters

| | |
|-----------------------|--|
| <i>idx</i> | The queue index to reset. |
| <i>num_max</i> | Maximum number of entries in this queue. |
| <i>inc_generation</i> | The config generation will be incremented when this is true. |

This function resets the driver-readable configuration space for the queue with the given index. The queue configuration is reset to all 0, and the maximum number of entries in the queue is set to *num_max*.

Definition at line 996 of file [l4virtio](#).

References [L4virtio::Svr::Dev_config::reset_queue\(\)](#).

Referenced by [Virtio_net::reset\(\)](#).

16.384.2.8 setup_queue()

```

template<typename DATA >
bool L4virtio::Svr::Device_t< DATA >::setup_queue (
    Virtqueue * q,
    unsigned qn,
    unsigned num_max ) [inline]
  
```

Enable/disable the specified queue.

Parameters

| | |
|----------------|---|
| <i>q</i> | Pointer to the ring that represents the virtqueue internally. |
| <i>qn</i> | Index of the queue. |
| <i>num_max</i> | Maximum number of supported entries in this queue. |

Returns

true for success.

- This function calculates the parameters of the virtqueue from the clients configuration space values, checks the accessibility of the queue data structures and initializes *q* to ready state when all checks succeeded.

Definition at line 1041 of file [l4virtio](#).

References [L4virtio::Svr::Device_t< DATA >::_mem_info](#), [l4virtio_config_queue_t::avail_addr](#), [L4virtio::Virtqueue::avail_size\(\)](#), [l4virtio_config_queue_t::desc_addr](#), [L4virtio::Virtqueue::desc_size\(\)](#), [L4virtio::Virtqueue::disable\(\)](#), [L4_UNLIKELY](#), [l4virtio_config_queue_t::num](#), [L4virtio::Svr::Dev_config::qconfig\(\)](#), [l4virtio_config_queue_t::ready](#), [L4virtio::Virtqueue::setup\(\)](#), [l4virtio_config_queue_t::used_addr](#), and [L4virtio::Virtqueue::used_size\(\)](#).

 void [load_desc](#) ([Virtqueue::Desc](#) const &desc, [Request_processor](#) const *p, ARG *data) const
Default implementation returning generic information.

16.385.1 Detailed Description

```
template<typename DATA>
class L4virtio::Svr::Driver_mem_list_t< DATA >
```

List of driver memory regions assigned to a single L4-VIRTIO transport instance.

Note

The regions added to this list *must* never overlap.

Definition at line 629 of file [l4virtio](#).

16.385.2 Member Function Documentation

16.385.2.1 add()

```
template<typename DATA >
Mem_region const * L4virtio::Svr::Driver_mem_list_t< DATA >::add (
    l4_uint64_t drv_base,
    l4_umword_t size,
    l4_addr_t offset,
    Ds_cap && ds ) [inline]
```

Add a new region to the list.

Parameters

| | |
|-----------------|--|
| <i>drv_base</i> | Driver base address of the region. |
| <i>size</i> | Size of the region in bytes. |
| <i>offset</i> | Offset within the data space attached to <i>drv_base</i> . |
| <i>ds</i> | Data space backing the driver memory. |

Returns

A pointer to the new region.

Definition at line 669 of file [l4virtio](#).

References [L4Re::chksys\(\)](#), [L4virtio::Svr::Driver_mem_list_t< DATA >::full\(\)](#), and [L4_ENOMEM](#).

16.385.2.2 find()

```
template<typename DATA >
Mem_region * L4virtio::Svr::Driver_mem_list_t< DATA >::find (
    l4_uint64_t base,
    l4_umword_t size ) const [inline]
```

Find memory region containing the given driver address region.

Parameters

| | |
|-------------|----------------------|
| <i>base</i> | Driver base address. |
| <i>size</i> | Size of the region. |

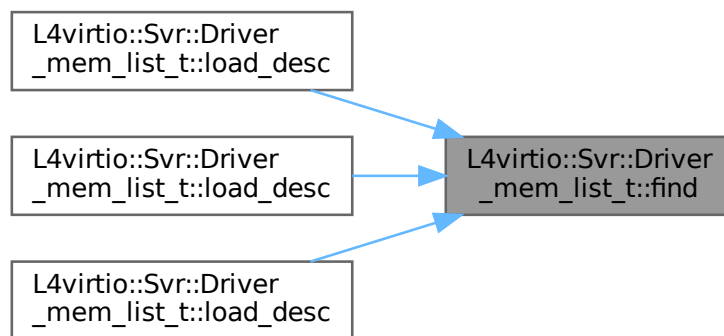

Returns

Pointer to the region containing the given region, NULL if none is found.

Definition at line 703 of file [l4virtio](#).

16.385.2.3 full()

```
template<typename DATA >
bool L4virtio::Svr::Driver_mem_list_t< DATA >::full ( ) const [inline]
```

Returns

True if the remaining capacity is 0.

Definition at line 658 of file [l4virtio](#).

Referenced by [L4virtio::Svr::Driver_mem_list_t< DATA >::add\(\)](#).

Here is the caller graph for this function:

**16.385.2.4 init()**

```
template<typename DATA >
void L4virtio::Svr::Driver_mem_list_t< DATA >::init (
    unsigned max ) [inline]
```

Make a fresh list with capacity *max*.

Parameters

| | |
|------------|------------------------------|
| <i>max</i> | The capacity of this vector. |
|------------|------------------------------|

Definition at line 650 of file [l4virtio](#).

16.385.2.5 load_desc() [1/3]

```
template<typename DATA >
template<typename ARG >
void L4virtio::Svr::Driver_mem_list_t< DATA >::load_desc (
    Virtqueue::Desc const & desc,
    Request_processor const * p,
    ARG * data ) const [inline]
```

Default implementation returning generic information.

Template Parameters

| | |
|------------|--|
| <i>ARG</i> | Abstract argument type used with Request_processor::start() and Request_processor::next() to deliver the result of loading a descriptor. This type must provide a constructor taking three arguments: (1) pointer to a <code>Driver_mem_region</code> , (2) the Virtqueue::Desc descriptor, and (3) a pointer to the calling Request_processor . |
|------------|--|

Parameters

| | | |
|-----|-------------|--|
| | <i>desc</i> | The descriptor to load |
| | <i>p</i> | The request processor calling us |
| out | <i>data</i> | Shall be assigned to ARG(mem, desc, p) |

Exceptions

| | |
|---------------------------------------|---|
| <i>Bad_descriptor</i> | The descriptor address could not be translated. |
|---------------------------------------|---|

Definition at line 764 of file [l4virtio](#).

16.385.2.6 load_desc() [2/3]

```

template<typename DATA >
void L4virtio::Svr::Driver_mem_list_t< DATA >::load_desc (
    Virtqueue::Desc const & desc,
    Request_processor const * p,
    Mem_region const ** data ) const [inline]
  
```

Default implementation returning the Driver_mem_region.

Parameters

| | | |
|-----|-------------|--|
| | <i>desc</i> | The descriptor to load |
| | <i>p</i> | The request processor calling us |
| out | <i>data</i> | Shall be set to a pointer to the Driver_mem_region that covers the descriptor. |

Exceptions

| | |
|---------------------------------------|---|
| <i>Bad_descriptor</i> | The descriptor address could not be translated. |
|---------------------------------------|---|

    Virtqueue::Desc const & desc,
    Request_processor const * p,
    Virtqueue::Desc const ** table ) const [inline]
  
```

Default implementation for loading an indirect descriptor.

Parameters

| | | |
|-----|--------------|---|
| | <i>desc</i> | The descriptor to load |
| | <i>p</i> | The request processor calling us |
| out | <i>table</i> | Shall be set to the loaded descriptor table |

Exceptions

| | |
|--------------------------------|---|
| Bad_descriptor | The descriptor address could not be translated. |
|--------------------------------|---|

16.386.1 Detailed Description

template<typename DATA>

class L4virtio::Svr::Driver_mem_region_t< DATA >

Region of driver memory, that shall be managed locally.

Template Parameters

| | |
|-------------|---------------------------------------|
| <i>DATA</i> | Class defining additional information |
|-------------|---------------------------------------|

Definition at line 450 of file [l4virtio](#).

16.386.2 Constructor & Destructor Documentation

16.386.2.1 Driver_mem_region_t()

```
template<typename DATA >
L4virtio::Svr::Driver_mem_region_t< DATA >::Driver_mem_region_t (
    l4_uint64_t drv_base,
    l4_umword_t size,
    l4_addr_t offset,
    Ds_cap && ds ) [inline]
```

Make a local memory region for the given driver values.

Parameters

| | |
|-----------------|---|
| <i>drv_base</i> | Base address of the memory region used by the driver. |
| <i>size</i> | Size of the memory region. |
| <i>offset</i> | Offset within the data space that is mapped to <i>drv_base</i> within the driver. |
| <i>ds</i> | Data space capability backing the memory. |

This constructor attaches the region of given data space to the local address space and stores the corresponding data for later reference.

Definition at line 498 of file [l4virtio](#).

References [L4Re::chksys\(\)](#), [L4virtio::Svr::Driver_mem_region_t< DATA >::ds\(\)](#), [L4Re::Dataspace::Stats::flags](#), [L4Re::Rm::Unique_region< T >::get\(\)](#), [L4Re::Dataspace::info\(\)](#), [L4_CAP_FPAGE_RO](#), [L4_CAP_FPAGE_RW](#), [L4_EINVAL](#), [L4_ENOSYS](#), [L4_ERANGE](#), [L4_PAGESIZE](#), [l4_round_page\(\)](#), [L4_SUPERPAGESHIFT](#), [L4::lpc::make_cap\(\)](#), [L4Re::Rm::F::R](#), [L4Re::Rm::F::Search_addr](#), [L4virtio::Svr::Driver_mem_region_t< DATA >::size\(\)](#), [L4Re::Dataspace::Stats::size](#), [L4Re::Dataspace::F::W](#), and [L4Re::Rm::F::W](#).

16.386.3.1 contains()

```

template<typename DATA >
bool L4virtio::Svr::Driver_mem_region_t< DATA >::contains (
    l4_uint64_t base,
    l4_umword_t size ) const [inline]

```

Test if the given driver address range is within this region.

Parameters

| | |
|-------------|-----------------------------------|
| <i>base</i> | The driver base address. |
| <i>size</i> | The size of the region to lookup. |

Returns

true if the given driver address region is contained in this region, false else.

- bool [has_more](#) () const
Are there more chained descriptors?
- template<typename DESC_MAN , typename ... ARGS>
bool [next](#) (DESC_MAN *dm, ARGS... args)
Switch to the next descriptor in a descriptor chain.

16.387.1 Detailed Description

Encapsulate the state for processing a VIRTIO request.

A VIRTIO request is a possibly chained list of descriptors retrieved from the available ring of a virtqueue, using [Virtqueue::next_avail](#)).

The descriptor processing depends on helper (DESC_MAN) for interpreting the descriptors in the context of the device implementation.

DESC_MAN has to provide the functionality to safely dereference a descriptor from a descriptor list.

The following methods must be provided by DESC_MAN:

- DESC_MAN::load_desc([Virtqueue::Desc](#) const &desc,
Request_processor const *proc,
[Virtqueue::Desc](#) const **table)

This function is used to dereference desc as an indirect descriptor table, and must return a pointer to an indirect descriptor table.

- DESC_MAN::load_desc([Virtqueue::Desc](#) const &desc,
Request_processor const *proc, ...)

This function is used to dereference a descriptor as a normal data buffer, and '...' are the arguments that are passed to [start](#)() and [next](#)()).

Definition at line [472](#) of file [virtio](#).

16.387.2 Member Function Documentation

16.387.2.1 current_flags()

```
Virtqueue::Desc::Flags L4virtio::Svr::Request_processor::current_flags ( ) const [inline]
```

Get the flags of the currently processed descriptor.

Returns

The flags of the currently processed descriptor.

Definition at line [545](#) of file [virtio](#).

References [L4virtio::Virtqueue::Desc::flags](#).

16.387.2.2 has_more()

```
bool L4virtio::Svr::Request_processor::has_more ( ) const [inline]
```

Are there more chained descriptors?

Returns

true if there are more chained descriptors in the current request.

Collaboration diagram for L4virtio::Svr::Scmi::Scmi_dev:

Public Member Functions

- void **add_proto** ([l4_uint32_t](#) id, [Proto](#)< [Scmi_dev](#) > *proto)

Add an actual protocol implementation with the given id to the server.

Public Member Functions inherited from [L4virtio::Svr::Device_t](#)< [DATA](#) >

- virtual bool **check_features** ()
callback for checking the subset of accepted features
- virtual void **cfg_changed** (unsigned)
callback for client device configuration changes
- virtual void **register_driver_irq** (unsigned idx)
Callback for registering an notification IRQ (multi IRQ).
- virtual [L4::Cap](#)< [L4::Irq](#) > **device_notify_irq** (unsigned idx)
Callback to gather the device notification IRQ (multi IRQ).
- virtual unsigned **num_events_supported** () const
Return the highest notification index supported.

- **Device_t** ([Dev_config](#) *dev_config)
Make a device for the given config.
- **Mem_list** const * **mem_info** () const
Get the memory region list used for this device.
- void **reset_queue_config** (unsigned idx, unsigned num_max, bool inc_generation=false)
Trigger reset for the configuration space for queue idx.
- void **init_mem_info** (unsigned num)
Initialize the memory region list to the given maximum.
- void **device_error** ()
Transition device into DEVICE_NEEDS_RESET state.
- bool **setup_queue** ([Virtqueue](#) *q, unsigned qn, unsigned num_max)
Enable/disable the specified queue.
- bool **handle_mem_cmd_write** ()
Check for a value in the cmd register and handle a write.
- void **enable_trusted_ds_validation** ()
Enable trusted dataspace validation.
- void **add_trusted_dataspaces** (std::shared_ptr< [Ds_vector](#) const > ds)
Provide a list of trusted dataspaces that can be used for validation.

Additional Inherited Members

Protected Attributes inherited from [L4virtio::Svr::Device_t](#)< [DATA](#) >

- **Mem_list** **mem_info**
Memory region list.

16.396.1 Detailed Description

A server implementation of the virtio-scmi protocol.

Use this class as a base to implement your own specific SCMI device.

SCMI defines multiple protocols which can be optionally handled. This server implementation is flexible enough to handle any combination of them. The user of this server has to deviate from the provided [Proto](#) classes (for the protocols he want to handle) and needs to implement the required callbacks.

Right now, support for the base and the performance protocol is provided.

The base protocol is mandatory.

If you want to use this from a Uvmm Linux guest, the device tree needs to look something like this:

```
firmware {
    scmi {
        compatible = "arm,scmi-virtio";

        #address-cells = <1>;
        #size-cells = <0>;

        // ... supported protocols ...
    };
};
```

Definition at line 336 of file [virtio-scmi-device](#).

The documentation for this class was generated from the following file:

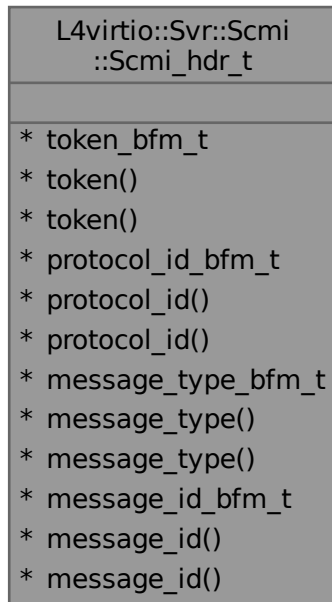

- l4/l4virtio/server/virtio-scmi-device

16.397 L4virtio::Svr::Scmi::Scmi_hdr_t Struct Reference

SCMI header.

```
#include <virtio-scmi-device>
```

16.398 L4virtio::Svr::Virtio_i2c< Request_handler, Epiface > Class Template Reference

A server implementation of the virtio-i2c protocol.

```
#include <virtio-i2c-device>
```

Inheritance diagram for L4virtio::Svr::Virtio_i2c< Request_handler, Epiface >:

Collaboration diagram for L4virtio::Svr::Virtio_i2c< Request_handler, Epiface >:

Data Structures

- class [Host_irq](#)
Handler for the host irq.
- class [Request_processor](#)
Handler for the Virtio requests.

Public Member Functions

- void **reset** () override
reset callback, called for doing a device reset
- bool **check_queues** () override
callback for checking if the queues at DRIVER_OK transition
- int **reconfig_queue** (unsigned idx) override
callback for client queue-config request
- void **trigger_driver_config_irq** () override
callback for triggering configuration change notification IRQ
- [L4::Cap](#)< [L4::Irq](#) > **device_notify_irq** () const override
callback to gather the device notification IRQ (old-style)
- void **register_single_driver_irq** () override
callback for registering a single guest IRQ for all queues (old-style)

Public Member Functions inherited from [L4virtio::Svr::Device_t](#)< [DATA](#) >

- virtual bool **check_features** ()
callback for checking the subset of accepted features
- virtual void **cfg_changed** (unsigned)
callback for client device configuration changes
- virtual void **register_driver_irq** (unsigned idx)
Callback for registering an notification IRQ (multi IRQ).
- virtual [L4::Cap](#)< [L4::Irq](#) > **device_notify_irq** (unsigned idx)
Callback to gather the device notification IRQ (multi IRQ).
- virtual unsigned **num_events_supported** () const
Return the highest notification index supported.
- **Device_t** ([Dev_config](#) *dev_config)
Make a device for the given config.
- [Mem_list](#) const * **mem_info** () const
Get the memory region list used for this device.
- void **reset_queue_config** (unsigned idx, unsigned num_max, bool inc_generation=false)
Trigger reset for the configuration space for queue idx.
- void **init_mem_info** (unsigned num)
Initialize the memory region list to the given maximum.
- void **device_error** ()
Transition device into DEVICE_NEEDS_RESET state.
- bool **setup_queue** ([Virtqueue](#) *q, unsigned qn, unsigned num_max)
Enable/disable the specified queue.
- bool **handle_mem_cmd_write** ()
Check for a value in the cmd register and handle a write.
- void **enable_trusted_ds_validation** ()
Enable trusted dataspace validation.
- void **add_trusted_dataspaces** (std::shared_ptr< [Ds_vector](#) const > ds)
Provide a list of trusted dataspaces that can be used for validation.

Public Member Functions inherited from [L4::Epiface_t](#)< [Derived](#), [IFACE](#), [BASE](#), bool >

- [l4_msgtag_t](#) dispatch ([l4_msgtag_t](#) tag, unsigned rights, [l4_utcb_t](#) *utcb) final
The abstract handler for client requests to the object.

Public Member Functions inherited from [L4::Epiface_t0< RPC_IFACE, BASE >](#)

- [Type_info::Demand](#) [get_buffer_demand](#) () const
Get the server-side buffer demand based in IFACE.
- [Cap< RPC_IFACE >](#) [obj_cap](#) () const
Get the (typed) capability to this object.

Public Member Functions inherited from [L4::Epiface](#)

- [Epiface](#) ()
Make a server object.
- virtual [~Epiface](#) ()=0
Destroy the object.
- Stored_cap [obj_cap](#) () const
Get the capability to the kernel object belonging to this object.
- [Server_iface](#) * [server_iface](#) () const
Get pointer to server interface at which the object is currently registered.
- int [set_server](#) ([Server_iface](#) *srv, [Cap< void >](#) cap, bool managed=false)
Set server registration info for the object.
- void [set_obj_cap](#) ([Cap< void >](#) const &cap)
Deprecated server registration function.

Additional Inherited Members

Public Types inherited from [L4::Epiface_t0< RPC_IFACE, BASE >](#)

- typedef [RPC_IFACE](#) **Interface**
Data type of the IPC interface definition.

Public Types inherited from [L4::Epiface](#)

- typedef [lpc_svr::Server_iface](#) **Server_iface**
Type for abstract server interface.
- typedef [lpc_svr::Server_iface::Demand](#) **Demand**
Type for server-side receive buffer demand.

Protected Attributes inherited from [L4virtio::Svr::Device_t< DATA >](#)

- [Mem_list](#) **_mem_info**
Memory region list.

16.398.1 Detailed Description

```
template<typename Request_handler, typename Epiface = L4virtio::Device>
class L4virtio::Svr::Virtio_i2c< Request_handler, Epiface >
```

A server implementation of the virtio-i2c protocol.

Template Parameters

| | |
|------------------------|--|
| <i>Request_handler</i> | The type that is used to handle incoming requests. Needs to have <code>handle_read(l4_uint8_t *, unsigned)</code> and <code>handle_write(l4_uint8_t const *, unsigned)</code> functions. |
| <i>Epiface</i> | The Epiface to derive from. Defaults to L4virtio::Device . |

Definition at line 86 of file [virtio-i2c-device](#).

The documentation for this class was generated from the following file:

- l4/l4virtio/server/virtio-i2c-device

16.399 L4virtio::Svr::Virtio_i2c< Request_handler, Epiface >::Host_irq Class Reference

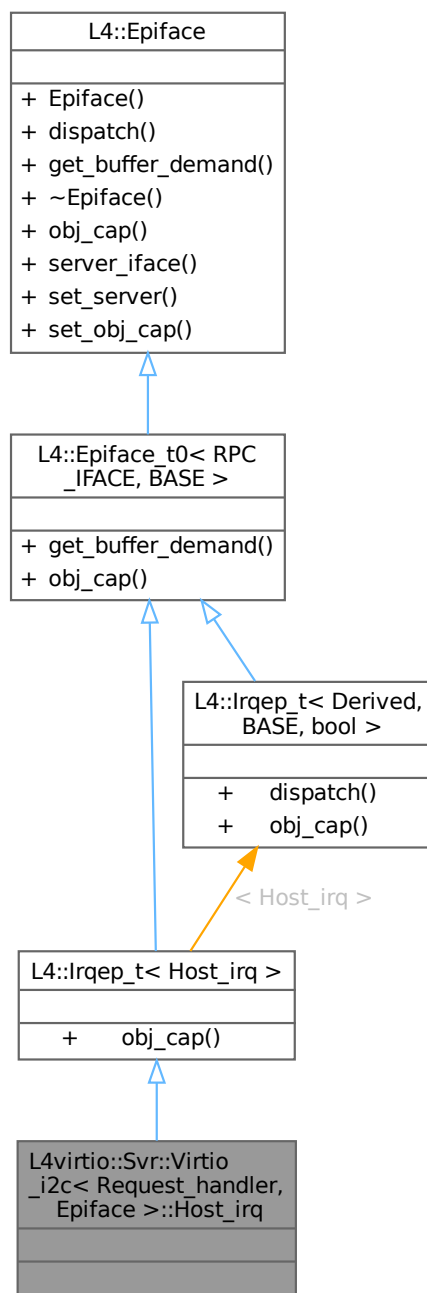

Handler for the host irq.

```
#include <virtio-i2c-device>
```

Additional Inherited Members

Public Types inherited from [L4::Epiface_t0< RPC_IFACE, BASE >](#)

- `typedef RPC_IFACE Interface`

Data type of the IPC interface definition.

Public Types inherited from [L4::Epiface](#)

- typedef [lpc_svr::Server_iface](#) **Server_iface**
Type for abstract server interface.
- typedef [lpc_svr::Server_iface::Demand](#) **Demand**
Type for server-side receive buffer demand.

Public Member Functions inherited from [L4::lrqep_t< Host_irq >](#)

- [Cap< L4::lrq >](#) **obj_cap** () const
Get the (typed) capability to this object.

Public Member Functions inherited from [L4::Epiface_t0< RPC_IFACE, BASE >](#)

- [Type_info::Demand](#) **get_buffer_demand** () const
Get the server-side buffer demand based in IFACE.
- [Cap< RPC_IFACE >](#) **obj_cap** () const
Get the (typed) capability to this object.

Public Member Functions inherited from [L4::Epiface](#)

- **Epiface** ()
Make a server object.
- virtual **~Epiface** ()=0
Destroy the object.
- Stored_cap **obj_cap** () const
Get the capability to the kernel object belonging to this object.
- [Server_iface](#) * **server_iface** () const
Get pointer to server interface at which the object is currently registered.
- int **set_server** ([Server_iface](#) *srv, [Cap< void >](#) cap, bool managed=false)
Set server registration info for the object.
- void **set_obj_cap** ([Cap< void >](#) const &cap)
Deprecated server registration function.

16.399.1 Detailed Description

```
template<typename Request_handler, typename Epiface = L4virtio::Device>
class L4virtio::Svr::Virtio_i2c< Request_handler, Epiface >::Host_irq
```

Handler for the host irq.

An [L4::lrqep_t](#) to handle irq's send to the server.

Definition at line 106 of file [virtio-i2c-device](#).

The documentation for this class was generated from the following file:

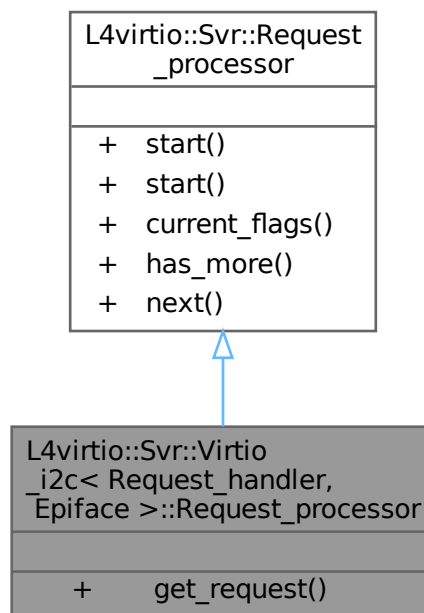

- l4/l4virtio/server/virtio-i2c-device

16.400 L4virtio::Svr::Virtio_i2c< Request_handler, Epiface >::Request_processor Class Reference

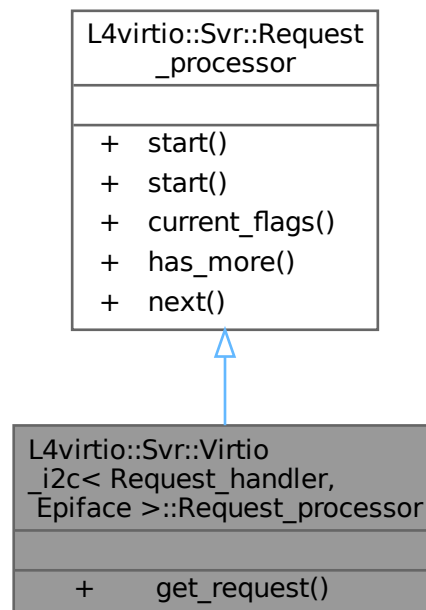

Handler for the Virtio requests.

```
#include <virtio-i2c-device>
```

Collaboration diagram for L4virtio::Svr::Virtio_i2c< Request_handler, Epiface >::Request_processor:

Public Member Functions

- I2c_req [get_request](#) ()

Linux prepares the I2C request in three data parts: 1st: out_hdr 2nd: buffer (optional) 3rd: in_hdr.

Public Member Functions inherited from [L4virtio::Svr::Request_processor](#)

- template<typename DESC_MAN , typename ... ARGS>
void [start](#) (DESC_MAN *dm, [Virtqueue](#) *ring, [Virtqueue::Head_desc](#) const &request, ARGS... args)
Start processing a new request.
- template<typename DESC_MAN , typename ... ARGS>
[Virtqueue::Request](#) const & [start](#) (DESC_MAN *dm, [Virtqueue::Request](#) const &request, ARGS... args)
Start processing a new request.
- [Virtqueue::Desc::Flags](#) [current_flags](#) () const
Get the flags of the currently processed descriptor.
- bool [has_more](#) () const
Are there more chained descriptors?
- template<typename DESC_MAN , typename ... ARGS>
bool [next](#) (DESC_MAN *dm, ARGS... args)
Switch to the next descriptor in a descriptor chain.

16.400.1 Detailed Description

```
template<typename Request_handler, typename Epiface = L4virtio::Device>
class L4virtio::Svr::Virtio_i2c< Request_handler, Epiface >::Request_processor
```

Handler for the Virtio requests.

Definition at line 123 of file [virtio-i2c-device](#).

16.400.2 Member Function Documentation

16.400.2.1 get_request()

```
template<typename Request_handler , typename Epiface = L4virtio::Device>
I2c_req L4virtio::Svr::Virtio_i2c< Request_handler, Epiface >::Request_processor::get_request
( ) [inline]
```

Linux prepares the I2C request in three data parts: 1st: out_hdr 2nd: buffer (optional) 3rd: in_hdr.

This parses the three Data_buffers and recreate the virtio_i2c_req structure.

Definition at line 172 of file [virtio-i2c-device](#).

References [L4virtio::Svr::Device_t< DATA >::mem_info\(\)](#), and [L4virtio::Svr::Request_processor::next\(\)](#).

16.401.1 Detailed Description

```
template<typename Rnd_state, typename Epiface = L4virtio::Device>
class L4virtio::Svr::Virtio_rng< Rnd_state, Epiface >
```

A server implementation of the virtio-rng protocol.

Template Parameters

| | |
|------------------|---|
| <i>Rnd_state</i> | The type that implements the random data generation. <code>Rnd_state::get_random(int len, unsigned char *buf)</code> is called to get len random bytes written into buf TODO: virtio-rng supports providing less random bytes then requested. This API currently does not support that, as I do not have a test case. |
| <i>Epiface</i> | The Epiface to derive from. Defaults to <code>L4virtio::Device</code> . |

Definition at line 33 of file [virtio-rng-device](#).

The documentation for this class was generated from the following file:

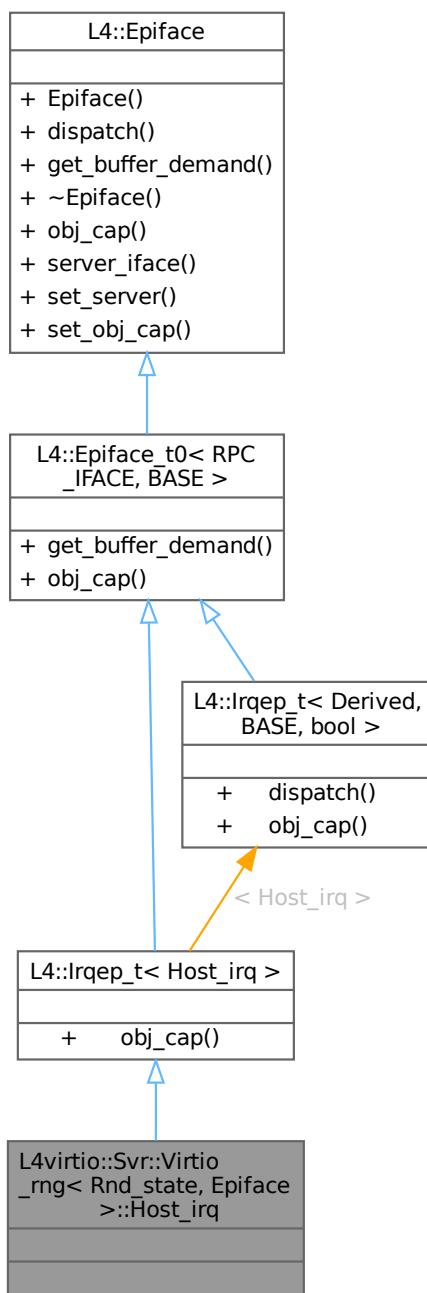

- `l4/l4virtio/server/virtio-rng-device`

Data Structures

- class [Head_desc](#)
VIRTIO request, essentially a descriptor from the available ring.

Public Member Functions

- Request [next_avail](#) ()

- Get the next available descriptor from the available ring.*

 - void [rewind_avail](#) ([Head_desc](#) const &d)

Return unfinished descriptors to the available ring, i.e.

 - bool [desc_avail](#) () const
- Test for available descriptors.*
- void [consumed](#) ([Head_desc](#) const &r, [l4_uint32_t](#) len=0)
- Put the given descriptor into the used ring.*
- template<typename ITER >
void [consumed](#) (ITER const &begin, ITER const &end)
- Put multiple descriptors into the used ring.*
- template<typename QUEUE_OBSERVER >
void [finish](#) ([Head_desc](#) &d, QUEUE_OBSERVER *o, [l4_uint32_t](#) len=0)
- Add a descriptor to the used ring, and notify an observer.*
- template<typename ITER , typename QUEUE_OBSERVER >
void [finish](#) (ITER const &begin, ITER const &end, QUEUE_OBSERVER *o)
- Add a range of descriptors to the used ring, and notify an observer once.*
- void [disable_notify](#) ()
- Set the 'no notify' flag for this queue.*
- void [enable_notify](#) ()
- Clear the 'no notify' flag for this queue.*
- [Desc](#) const * [desc](#) (unsigned idx) const
- Get a descriptor from the descriptor list.*

Public Member Functions inherited from [L4virtio::Virtqueue](#)

- void [disable](#) ()
- Completely disable the queue.*
- unsigned long [total_size](#) () const
- Calculate the total size of this virtqueue.*
- unsigned long [avail_offset](#) () const
- Get the offset of the available ring from the descriptor table.*
- unsigned long [used_offset](#) () const
- Get the offset of the used ring from the descriptor table.*
- void [setup](#) (unsigned [num](#), void *desc, void *avail, void *used)
- Enable this queue.*
- void [setup_simple](#) (unsigned [num](#), void *ring)
- Enable this queue.*
- void [dump](#) ([Desc](#) const *d) const
- Dump descriptors for this queue.*
- bool [ready](#) () const
- Test if this queue is in working state.*
- unsigned [num](#) () const
- bool [no_notify_guest](#) () const
- Get the no IRQ flag of this queue.*
- bool [no_notify_host](#) () const
- Get the no notify flag of this queue.*
- void [no_notify_host](#) (bool value)
- Set the no-notify flag for this queue.*
- [l4_uint16_t](#) [get_avail_idx](#) () const
- Get available index from available ring (for debugging).*
- [l4_uint16_t](#) [get_tail_avail_idx](#) () const
- Get tail-available index stored in local state (for debugging).*

Additional Inherited Members

Public Types inherited from [L4virtio::Virtqueue](#)

- `enum`
Fixed alignment values for different parts of a virtqueue.

Static Public Member Functions inherited from [L4virtio::Virtqueue](#)

- static unsigned long `total_size` (unsigned `num`)
Calculate the total size for a virtqueue of the given dimensions.
- static unsigned long `desc_size` (unsigned `num`)
Calculate the size of the descriptor table for `num` entries.
- static unsigned long `desc_align` ()
Get the alignment in zero LSBs needed for the descriptor table.
- static unsigned long `avail_size` (unsigned `num`)
Calculate the size of the available ring for `num` entries.
- static unsigned long `avail_align` ()
Get the alignment in zero LSBs needed for the available ring.
- static unsigned long `used_size` (unsigned `num`)
Calculate the size of the used ring for `num` entries.
- static unsigned long `used_align` ()
Get the alignment in zero LSBs needed for the used ring.

Protected Member Functions inherited from [L4virtio::Virtqueue](#)

- `Virtqueue ()`=default
Create a disabled virtqueue.

Protected Attributes inherited from [L4virtio::Virtqueue](#)

- `Desc * _desc` = nullptr
pointer to descriptor table, NULL if queue is off.
- `Avail * _avail` = nullptr
pointer to available ring.
- `Used * _used` = nullptr
pointer to used ring.
- `l4_uint16_t _current_avail` = 0
The life counter for the queue.
- `l4_uint16_t _idx_mask` = 0
mask used for indexing into the descriptor table and the rings.

16.404.1 Detailed Description

[Virtqueue](#) implementation for the device.

This class represents a single virtqueue, with a local running available index.

Note

The [Virtqueue](#) implementation is not thread-safe.

Definition at line 87 of file [virtio](#).

16.404.2 Member Function Documentation

16.404.2.1 consumed() [1/2]

```
void L4virtio::Svr::Virtqueue::consumed (
    Head_desc const & r,
    14_uint32_t len = 0 ) [inline]
```

Put the given descriptor into the used ring.

Parameters

| | |
|------------|---|
| <i>r</i> | Request that shall be marked as finished. |
| <i>len</i> | The total number of bytes written. |

Precondition

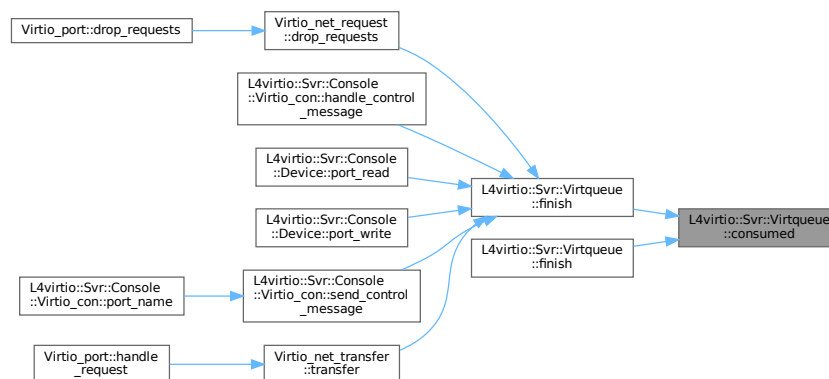

- queue must be in working state.
- r* must be a valid request from this queue.

Definition at line 190 of file [virtio](#).

References [L4virtio::Virtqueue::_desc](#), [L4virtio::Virtqueue::_idx_mask](#), [L4virtio::Virtqueue::_used](#), [L4virtio::Virtqueue::Used::idx](#), and [L4virtio::Virtqueue::Used::ring](#).

Referenced by [finish\(\)](#), and [finish\(\)](#).

Here is the caller graph for this function:

16.404.2.2 consumed() [2/2]

```
template<typename ITER >
void L4virtio::Svr::Virtqueue::consumed (
    ITER const & begin,
    ITER const & end ) [inline]
```

Put multiple descriptors into the used ring.

A range of descriptors, specified by *begin* and *end* iterators is added. Each iterator points to a struct that has a first member that is a [Head_desc](#) and a second member that is the corresponding number of bytes written.

Template Parameters

| | |
|-------------|--------------------------------------|
| <i>ITER</i> | The type of the iterator (inferred). |
|-------------|--------------------------------------|

Parameters

| | |
|--------------|--|
| <i>begin</i> | Iterator pointing to first new descriptor. |
| <i>end</i> | Iterator pointing to one past last entry. |

Precondition

queue must be in working state.

Definition at line 213 of file [virtio](#).

References [L4virtio::Virtqueue::_desc](#), [L4virtio::Virtqueue::_idx_mask](#), [L4virtio::Virtqueue::_used](#), [L4virtio::Virtqueue::Used::idx](#), and [L4virtio::Virtqueue::Used::ring](#).

16.404.2.3 desc()

```
Desc const * L4virtio::Svr::Virtqueue::desc (
    unsigned idx ) const [inline]
```

Get a descriptor from the descriptor list.

Parameters

| | |
|------------|------------------------------|
| <i>idx</i> | The index of the descriptor. |
|------------|------------------------------|

Precondition

$idx < num$

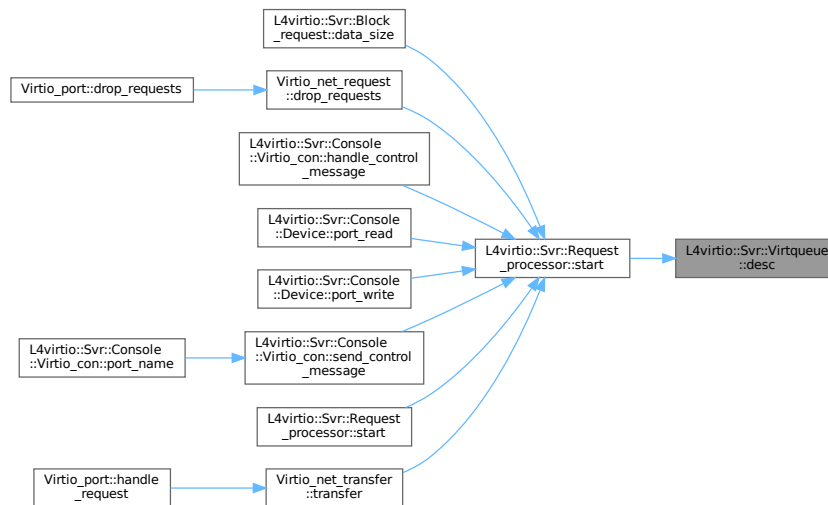

queue must be in working state

Definition at line 298 of file [virtio](#).

References [L4virtio::Virtqueue::_desc](#).

Referenced by [L4virtio::Svr::Request_processor::start\(\)](#).

Here is the caller graph for this function:

16.404.2.4 desc_avail()

```
bool L4virtio::Svr::Virtqueue::desc_avail ( ) const [inline]
```

Test for available descriptors.

Returns

true if there are descriptors available, false if not.

Precondition

The queue must be in working state.

Definition at line 175 of file [virtio](#).

References [L4virtio::Virtqueue::_avail](#), [L4virtio::Virtqueue::_current_avail](#), and [L4virtio::Virtqueue::Avail::idx](#).

Referenced by [Virtio_net_request::drop_requests\(\)](#).

Here is the caller graph for this function:

16.404.2.5 disable_notify()

```
void L4virtio::Svr::Virtqueue::disable_notify ( ) [inline]
```

Set the 'no notify' flag for this queue.

This function may be called on a disabled queue.

Definition at line 273 of file [virtio](#).

References [L4virtio::Virtqueue::_used](#), [L4virtio::Virtqueue::Used::flags](#), [L4_LIKELY](#), [L4virtio::Virtqueue::Used::Flags::no_notify\(\)](#), and [L4virtio::Virtqueue::ready\(\)](#).

Here is the call graph for this function:

16.404.2.6 enable_notify()

```
void L4virtio::Svr::Virtqueue::enable_notify ( ) [inline]
```

Clear the 'no notify' flag for this queue.

This function may be called on a disabled queue.

Definition at line 284 of file [virtio](#).

References [L4virtio::Virtqueue::_used](#), [L4virtio::Virtqueue::Used::flags](#), [L4_LIKELY](#), [L4virtio::Virtqueue::Used::Flags::no_notify\(\)](#), and [L4virtio::Virtqueue::ready\(\)](#).

Here is the call graph for this function:

16.404.2.7 finish() [1/2]

```
template<typename QUEUE_OBSERVER >
void L4virtio::Svr::Virtqueue::finish (
    Head_desc & d,
    QUEUE_OBSERVER * o,
    l4_uint32_t len = 0 ) [inline]
```

Add a descriptor to the used ring, and notify an observer.

Template Parameters

| | |
|-----------------------------|--------------------------------------|
| <code>QUEUE_OBSERVER</code> | The type of the observer (inferred). |
|-----------------------------|--------------------------------------|

Parameters

| | |
|------------------|---|
| <code>d</code> | descriptor of the request that is to be marked as finished. |
| <code>o</code> | Pointer to the observer that is notified. |
| <code>len</code> | Number of bytes written for this request. |

Precondition

- queue must be in working state.
- `d` must be a valid request from this queue.

Definition at line 240 of file [virtio](#).

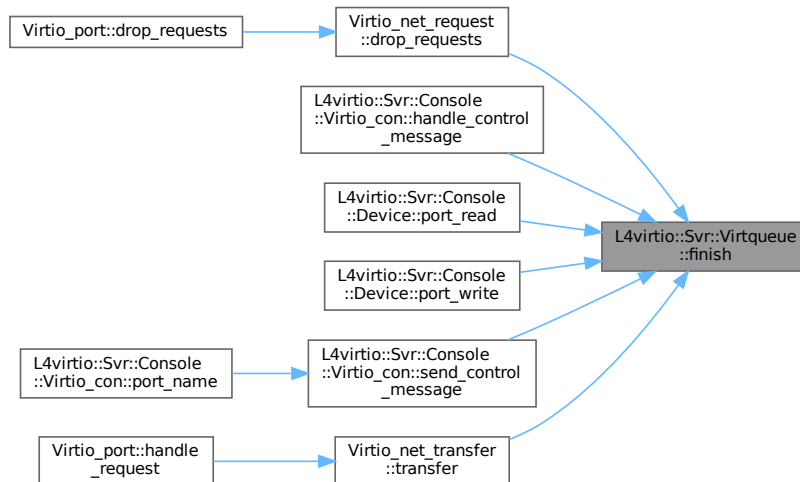

References [consumed\(\)](#).

Referenced by [Virtio_net_request::drop_requests\(\)](#), [L4virtio::Svr::Console::Virtio_con::handle_control_message\(\)](#), [L4virtio::Svr::Console::Device::port_read\(\)](#), [L4virtio::Svr::Console::Device::port_write\(\)](#), [L4virtio::Svr::Console::Virtio_con::send_control_message\(\)](#) and [Virtio_net_transfer::transfer\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.404.2.8 finish() [2/2]

```

template<typename ITER , typename QUEUE_OBSERVER >
void L4virtio::Svr::Virtqueue::finish (
    ITER const & begin,
    ITER const & end,
    QUEUE_OBSERVER * o ) [inline]

```

Add a range of descriptors to the used ring, and notify an observer once.

The iterators are passed to [consumed<ITER>\(ITER const &, ITER const &\)](#), and the requirements detailed there apply.

Template Parameters

| | |
|-----------------------|--------------------------------------|
| <i>ITER</i> | type of the iterator (inferred) |
| <i>QUEUE_OBSERVER</i> | the type of the observer (inferred). |

Parameters

| | |
|--------------|---|
| <i>begin</i> | iterator pointing to first element. |
| <i>end</i> | iterator pointing to one past last element. |
| <i>o</i> | pointer to the observer that is notified. |

Precondition

queue must be in working state.

Definition at line 262 of file [virtio](#).

References [consumed\(\)](#).

Here is the call graph for this function:

16.404.2.9 next_avail()

```
Request L4virtio::Svr::Virtqueue::next_avail ( ) [inline]
```

Get the next available descriptor from the available ring.

Precondition

The queue must be in working state.

Returns

A Request for the next available descriptor, the Request is invalid if there are no descriptors in the available ring.

Note

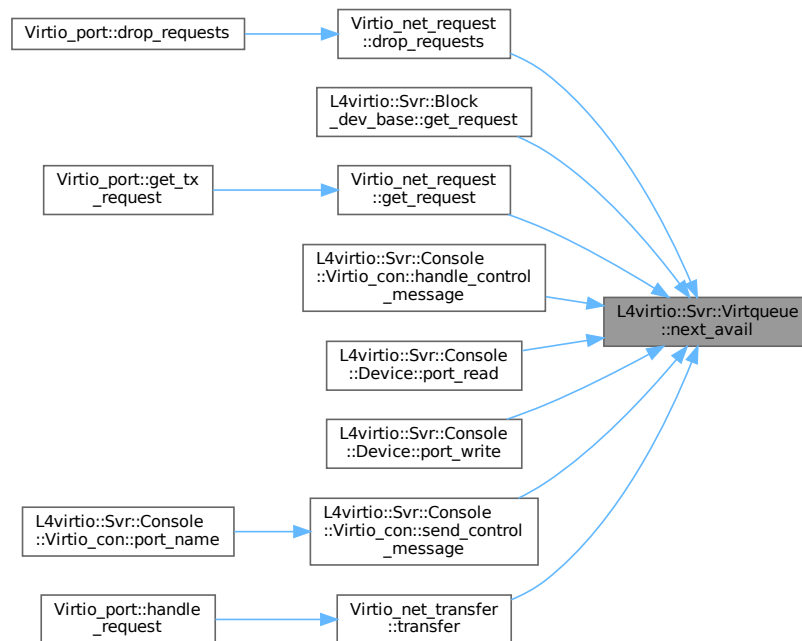

The return value must be checked even when a previous [desc_avail\(\)](#) returned true.

Definition at line 136 of file [virtio](#).

References [L4virtio::Virtqueue::_avail](#), [L4virtio::Virtqueue::_current_avail](#), [L4virtio::Virtqueue::_idx_mask](#), [L4virtio::Virtqueue::Avail::idx](#), [L4_LIKELY](#), and [L4virtio::Virtqueue::Avail::ring](#).

Here is the caller graph for this function:

16.404.2.10 rewind_avail()

```
void L4virtio::Svr::Virtqueue::rewind_avail (
    Head_desc const & d ) [inline]
```

Return unfinished descriptors to the available ring, i.e.

reset the local next index of the available ring to the given descriptor.

Parameters

| | |
|----------|---|
| <i>d</i> | descriptor of the request that is to be marked as finished. |
|----------|---|

Precondition

queue must be in working state.

d must be a valid request from this queue, obtained via [next_avail\(\)](#), that has not yet been finished, and in addition, no descriptors following it have been finished.

Definition at line 160 of file [virtio](#).

References [L4virtio::Virtqueue::_current_avail](#), [L4virtio::Virtqueue::_desc](#), and [L4virtio::Virtqueue::_idx_mask](#).

#include <virtqueue>
```

Inheritance diagram for L4virtio::Virtqueue:

Collaboration diagram for L4virtio::Virtqueue:

Data Structures

- class [Avail](#)
Type of available ring, this is read-only for the host.
- class [Desc](#)
Descriptor in the descriptor table.
- class [Used](#)
Used ring.
- struct [Used_elem](#)
Type of an element of the used ring.

Public Types

- enum
Fixed alignment values for different parts of a virtqueue.

Public Member Functions

- void `disable` ()
Completely disable the queue.
- unsigned long `total_size` () const
Calculate the total size of this virtqueue.
- unsigned long `avail_offset` () const
Get the offset of the available ring from the descriptor table.
- unsigned long `used_offset` () const
Get the offset of the used ring from the descriptor table.
- void `setup` (unsigned `num`, void *`desc`, void *`avail`, void *`used`)
Enable this queue.
- void `setup_simple` (unsigned `num`, void *`ring`)
Enable this queue.
- void `dump` (`Desc` const *`d`) const
Dump descriptors for this queue.
- bool `ready` () const
Test if this queue is in working state.
- unsigned `num` () const
- bool `no_notify_guest` () const
Get the no IRQ flag of this queue.
- bool `no_notify_host` () const
Get the no notify flag of this queue.
- void `no_notify_host` (bool `value`)
Set the no-notify flag for this queue.
- `l4_uint16_t` `get_avail_idx` () const
Get available index from available ring (for debugging).
- `l4_uint16_t` `get_tail_avail_idx` () const
Get tail-available index stored in local state (for debugging).

Static Public Member Functions

- static unsigned long `total_size` (unsigned `num`)
Calculate the total size for a virtqueue of the given dimensions.
- static unsigned long `desc_size` (unsigned `num`)
Calculate the size of the descriptor table for `num` entries.
- static unsigned long `desc_align` ()
Get the alignment in zero LSBs needed for the descriptor table.
- static unsigned long `avail_size` (unsigned `num`)
Calculate the size of the available ring for `num` entries.
- static unsigned long `avail_align` ()
Get the alignment in zero LSBs needed for the available ring.
- static unsigned long `used_size` (unsigned `num`)
Calculate the size of the used ring for `num` entries.
- static unsigned long `used_align` ()
Get the alignment in zero LSBs needed for the used ring.

Protected Member Functions

- **Virtqueue** ()=default
Create a disabled virtqueue.

Protected Attributes

- **Desc** * **_desc** = nullptr
pointer to descriptor table, NULL if queue is off.
- **Avail** * **_avail** = nullptr
pointer to available ring.
- **Used** * **_used** = nullptr
pointer to used ring.
- **l4_uint16_t** **_current_avail** = 0
The life counter for the queue.
- **l4_uint16_t** **_idx_mask** = 0
mask used for indexing into the descriptor table and the rings.

16.406.1 Detailed Description

Low-level [Virtqueue](#).

This class represents a single virtqueue, with a local running available index.

Note

The [Virtqueue](#) implementation is not thread-safe.

Definition at line 80 of file [virtqueue](#).

16.406.2 Member Function Documentation

16.406.2.1 avail_align()

```
static unsigned long L4virtio::Virtqueue::avail_align ( ) [inline], [static]
```

Get the alignment in zero LSBs needed for the available ring.

Returns

The alignment in zero LSBs needed for an available ring.

Definition at line 286 of file [virtqueue](#).

16.406.2.2 avail_size()

```
static unsigned long L4virtio::Virtqueue::avail_size (
    unsigned num ) [inline], [static]
```

Calculate the size of the available ring for num entries.

Parameters

| | |
|------------------|--|
| <code>num</code> | The number of entries in the available ring. |
|------------------|--|

Returns

The size in bytes needed for an available ring with `num` entries.

Definition at line 278 of file [virtqueue](#).

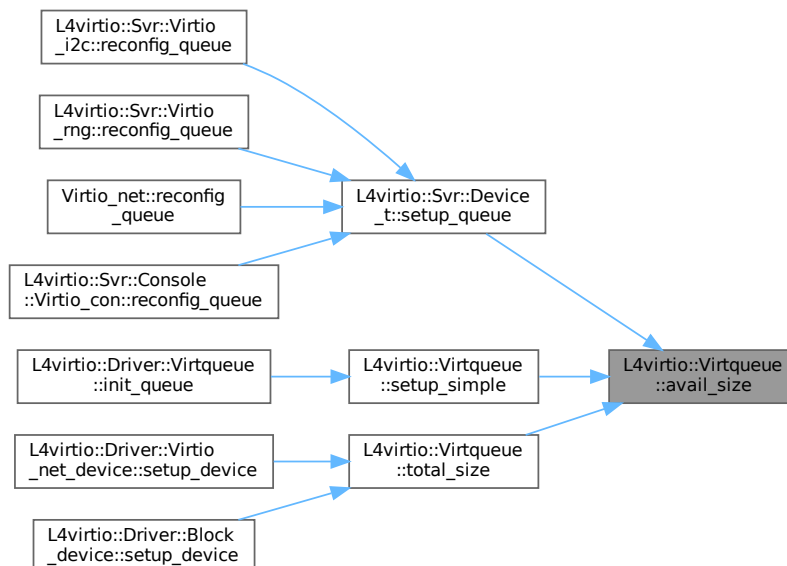

References [num\(\)](#).

Referenced by [L4virtio::Svr::Device_t< DATA >::setup_queue\(\)](#), [setup_simple\(\)](#), and [total_size\(\)](#).

Here is the caller graph for this function:

16.406.2.3 desc_align()

```
static unsigned long L4virtio::Virtqueue::desc_align ( ) [inline], [static]
```

Get the alignment in zero LSBs needed for the descriptor table.

Returns

The alignment in zero LSBs needed for a descriptor table.

Definition at line 268 of file [virtqueue](#).

16.406.2.4 desc_size()

```
static unsigned long L4virtio::Virtqueue::desc_size (
    unsigned num ) [inline], [static]
```

Calculate the size of the descriptor table for `num` entries.

Parameters

| | |
|------------|--|
| <i>num</i> | The number of entries in the descriptor table. |
|------------|--|

Returns

The size in bytes needed for a descriptor table with `num` entries.

Definition at line 260 of file [virtqueue](#).

References [num\(\)](#).

Here is the caller graph for this function:

16.406.2.5 disable()

```
void L4virtio::Virtqueue::disable ( ) [inline]
```

Completely disable the queue.

[setup\(\)](#) must be used to enable the queue again.

Definition at line 223 of file [virtqueue](#).

References [_desc](#).

Referenced by [L4virtio::Svr::Block_dev_base<Ds_data>::reset\(\)](#), and [L4virtio::Svr::Device_t<DATA>::setup_queue\(\)](#).

Here is the caller graph for this function:

16.406.2.6 dump()

```
void L4virtio::Virtqueue::dump (
    Desc const * d ) const [inline]
```

Dump descriptors for this queue.

Precondition

the queue must be in working state.

Definition at line 391 of file [virtqueue](#).

References [_desc](#), and [L4virtio::Virtqueue::Desc::dump\(\)](#).

Here is the call graph for this function:

16.406.2.7 get_avail_idx()

```
l4_uint16_t L4virtio::Virtqueue::get_avail_idx ( ) const [inline]
```

Get available index from available ring (for debugging).

Precondition

Queue must be in a working state.

Returns

current index in the available ring (shared between device model and device driver).

Definition at line 448 of file [virtqueue](#).

References [_avail](#), and [L4virtio::Virtqueue::Avail::idx](#).

16.406.2.8 get_tail_avail_idx()

```
l4_uint16_t L4virtio::Virtqueue::get_tail_avail_idx ( ) const [inline]
```

Get tail-available index stored in local state (for debugging).

Returns

current tail index for the the available ring.

Definition at line 455 of file [virtqueue](#).

References [_current_avail](#).

16.406.2.9 no_notify_guest()

```
bool L4virtio::Virtqueue::no_notify_guest ( ) const [inline]
```

Get the no IRQ flag of this queue.

Precondition

queue must be in working state.

Returns

true if the guest does not want to get IRQs (currently).

Definition at line 413 of file [virtqueue](#).

References [_avail](#), [L4virtio::Virtqueue::Avail::flags](#), and [L4virtio::Virtqueue::Avail::Flags::no_irq\(\)](#).

16.406.2.14 setup()

```
void L4virtio::Virtqueue::setup (
    unsigned num,
    void * desc,
    void * avail,
    void * used ) [inline]
```

Enable this queue.

Parameters

| | |
|--------------|--|
| <i>num</i> | The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2). |
| <i>desc</i> | The address of the descriptor table. (Must be Desc_align aligned and at least desc_size(num) bytes in size.) |
| <i>avail</i> | The address of the available ring. (Must be Avail_align aligned and at least avail_size(num) bytes in size.) |
| <i>used</i> | The address of the used ring. (Must be Used_align aligned and at least used_size(num) bytes in size.) |

Due to the data type of the descriptors, the queue can have a maximum size of 2^{16} .

Definition at line 348 of file [virtqueue](#).

16.406.2.17 total_size() [2/2]

```
static unsigned long L4virtio::Virtqueue::total_size (
    unsigned num ) [inline], [static]
```

Calculate the total size for a virtqueue of the given dimensions.

Parameters

| | |
|------------|--|
| <i>num</i> | The number of entries in the descriptor table, the available ring, and the used ring (must be a power of 2). |
|------------|--|

Returns

The total size in bytes of the queue data structures.

Definition at line 244 of file [virtqueue](#).

16.406.2.18 `used_align()`

```
static unsigned long L4virtio::Virtqueue::used_align ( ) [inline], [static]
```

Get the alignment in zero LSBs needed for the used ring.

Returns

The alignment in zero LSBs needed for an used ring.

Definition at line 305 of file [virtqueue](#).

16.406.2.19 `used_size()`

```
static unsigned long L4virtio::Virtqueue::used_size (
    unsigned num ) [inline], [static]
```

Calculate the size of the used ring for `num` entries.

Parameters

| | |
|------------|---|
| <i>num</i> | The number of entries in the used ring. |
|------------|---|

Returns

The size in bytes needed for an used ring with `num` entries.

Definition at line 297 of file [virtqueue](#).

Public Member Functions

- **Flags** ([l4_uint16_t](#) v)
Make [Flags](#) from raw 16bit value.

Data Fields

- [l4_uint16_t](#) raw
raw flags value of a virtio descriptor.

16.410.1 Detailed Description

Type for descriptor flags.

Definition at line 92 of file [virtqueue](#).

16.410.2 Member Typedef Documentation

16.410.2.1 indirect_bfm_t

```
typedef cxx::Bitfield<decltype( raw ), 2 , 2 > L4virtio::Virtqueue::Desc::Flags::indirect\_bfm\_t
```

Indirect descriptor, block contains a list of descriptors.

Type to access the `indirect` bits (2 to 2) of `raw`.

Definition at line 105 of file [virtqueue](#).

16.410.2.2 next_bfm_t

```
typedef cxx::Bitfield<decltype( raw ), 0 , 0 > L4virtio::Virtqueue::Desc::Flags::next\_bfm\_t
```

Part of a descriptor chain which is continued with the next field.

Type to access the `next` bits (0 to 0) of `raw`.

Definition at line 101 of file [virtqueue](#).

16.410.2.3 write_bfm_t

```
typedef cxx::Bitfield<decltype( raw ), 1 , 1 > L4virtio::Virtqueue::Desc::Flags::write\_bfm\_t
```

Block described by this descriptor is writeable.

Type to access the `write` bits (1 to 1) of `raw`.

Definition at line 103 of file [virtqueue](#).

The documentation for this struct was generated from the following file:

- `l4/l4virtio/virtqueue`

| + num |
| + ready |
| + driver_notify_index |
| + desc_addr |
| + avail_addr |
| + used_addr |
| + device_notify_index |

Data Fields

- [l4_uint16_t](#) **num_max**
R: maximum number of descriptors supported by this queue.
- [l4_uint16_t](#) **num**
RW: number of descriptors configured for this queue.
- [l4_uint16_t](#) **ready**
RW: queue ready flag (read-write)
- [l4_uint16_t](#) **driver_notify_index**
W: Event index to be used for device notifications (device to driver)
- [l4_uint64_t](#) **desc_addr**
W: address of descriptor table.
- [l4_uint64_t](#) **avail_addr**
W: address of available ring.
- [l4_uint64_t](#) **used_addr**
W: address of used ring.
- [l4_uint16_t](#) **device_notify_index**
R: Event index to be used by the driver (driver to device)

16.418.1 Detailed Description

Queue configuration entry.

An array of such entries is available at the [l4virtio_config_hdr_t::queues_offset](#) in the config data space.

Consistency rules for the queue config are:

- A driver might read `num_max` at any time.
- A driver must write to `num`, `desc_addr`, `avail_addr`, and `used_addr` only when `ready` is zero (0). Values in these fields are validated and used by the device only after successfully setting `ready` to one (1), either by the IPC or by `L4VIRTIO_CMD_CFG_QUEUE`.
- The value of `device_notify_index` is valid only when `ready` is one.
- The driver might write to `device_notify_index` at any time, however the change is guaranteed to take effect after a successful `L4VIRTIO_CMD_CFG_QUEUE` or after a `config_queue` IPC. Note, the change might also have immediate effect, depending on the device implementation.

A wrapper class around the value of a MAC address.

```
#include <mac_addr.h>
```

Collaboration diagram for Mac_addr:

Public Member Functions

- bool **is_broadcast** () const
Check if MAC address is a broadcast or multicast address.
- bool **is_unknown** () const
Check if the MAC address is not yet known.

16.425.1 Detailed Description

A wrapper class around the value of a MAC address.

Definition at line 19 of file [mac_addr.h](#).

The documentation for this class was generated from the following file:

- `pkg/virtio-net-switch/server/switch/mac_addr.h`

16.426 Mac_table< Size > Class Template Reference

[Mac_table](#) manages a 1:n association between ports and MAC addresses.

```
#include <mac_table.h>
```

Collaboration diagram for `Mac_table< Size >`:

| Mac_table< Size > | |
|-------------------|----------|
| | |
| + | lookup() |
| + | learn() |
| + | flush() |

Public Member Functions

- `Virtio_port * lookup (Mac_addr dst) const`
Find the destination port for a MAC address.
- `void learn (Mac_addr src, Virtio_port *port)`
Learn a MAC address (add it to the MAC table).
- `void flush (Virtio_port *port)`
Flush all associations with a given port.

16.426.1 Detailed Description

```
template<std::size_t Size = 1024U>
class Mac_table< Size >
```

`Mac_table` manages a 1:n association between ports and MAC addresses.

There are different types of devices which might be attached to a port. For a normal device the switch sees exactly one MAC address per port - the MAC address of the device attached to it. But there might be other devices like software bridges attached to the port sending packets with different MAC addresses to the port. Therefore the switch has to manage a 1:n association between ports and MAC addresses. The MAC table manages this association.

When a packet comes in we need to find the destination port for the packet and therefore perform a lookup based on the MAC address.

To prevent unbounded grow of the lookup table the number of entries is limited. Replacement is done on a round-robin basis. If the capacity was reached the oldest entry is evicted.

Definition at line 39 of file [mac_table.h](#).

16.426.2 Member Function Documentation

16.426.2.1 flush()

```
template<std::size_t Size = 1024U>
void Mac_table< Size >::flush (
    Virtio_port * port ) [inline]
```

Flush all associations with a given port.

Parameters

| | |
|-------------|---------------------------------------|
| <i>port</i> | Pointer to port that is to be flushed |
|-------------|---------------------------------------|

This function removes all references to a given port from the MAC table. Since we manage a 1:n association between ports and MAC addresses there might be more than one entry for a given port and we have to iterate over the whole array to delete every reference to the port.

Definition at line 122 of file [mac_table.h](#).

Referenced by [Virtio_switch::check_ports\(\)](#).

Here is the caller graph for this function:

16.426.2.2 learn()

```

template<std::size_t Size = 1024U>
void Mac_table< Size >::learn (
    Mac_addr src,
    Virtio_port * port ) [inline]
  
```

Learn a MAC address (add it to the MAC table).

Parameters

| | |
|-------------|--|
| <i>src</i> | MAC address |
| <i>port</i> | Pointer to the port object that can be used to reach MAC address src |

Will evict the oldest learned address from the table if the maximum capacity was reached and if the MAC address was not known yet. The source port of the table entry is always updated to cope with clients that move between ports.

Definition at line 74 of file [mac_table.h](#).

References [L4_UNLIKELY](#), and [Mac_table< Size >::lookup\(\)](#).

Here is the call graph for this function:

16.426.2.3 lookup()

```
template<std::size_t Size = 1024U>
Virtio_port * Mac_table< Size >::lookup (
    Mac_addr dst ) const [inline]
```

Find the destination port for a MAC address.

Parameters

| | |
|------------|-------------|
| <i>dst</i> | MAC address |
|------------|-------------|

Return values

| | |
|----------------|------------------------------------|
| <i>nullptr</i> | The MAC address is not known (yet) |
| <i>other</i> | Pointer to the destination port |

Definition at line 56 of file [mac_table.h](#).

Referenced by [Mac_table< Size >::learn\(\)](#).

16.427 Switch_factory Class Reference

The IPC interface for creating ports.

Inheritance diagram for Switch_factory:

Collaboration diagram for Switch_factory:

Public Member Functions

- long `op_create` (L4::Factory::Rights, L4::lpc::Cap< void > &res, l4_umword_t type, L4::lpc::Varg_list_ref va)
Handle factory protocol.

Public Member Functions inherited from L4::Epiface_t0< RPC_IFACE, BASE >

- Type_info::Demand `get_buffer_demand` () const

Get the server-side buffer demand based in IFACE.

- [Cap](#)< [RPC_IFACE](#) > [obj_cap](#) () const

Get the (typed) capability to this object.

Public Member Functions inherited from [L4::Epiface](#)

- **Epiface** ()
Make a server object.
- virtual ~**Epiface** ()=0
Destroy the object.
- Stored_cap [obj_cap](#) () const
Get the capability to the kernel object belonging to this object.
- [Server_iface](#) * [server_iface](#) () const
Get pointer to server interface at which the object is currently registered.
- int [set_server](#) ([Server_iface](#) *srv, [Cap](#)< void > cap, bool managed=false)
Set server registration info for the object.
- void **set_obj_cap** ([Cap](#)< void > const &cap)
Deprecated server registration function.

Additional Inherited Members

Public Types inherited from [L4::Epiface_t0](#)< [RPC_IFACE](#), [BASE](#) >

- typedef [RPC_IFACE](#) **Interface**
Data type of the IPC interface definition.

Public Types inherited from [L4::Epiface](#)

- typedef [lpc_svr::Server_iface](#) **Server_iface**
Type for abstract server interface.
- typedef [lpc_svr::Server_iface::Demand](#) **Demand**
Type for server-side receive buffer demand.

16.427.1 Detailed Description

The IPC interface for creating ports.

The Switch factory provides an IPC interface to create ports. Ports are the only option for a client to communicate with the switch and, thus, with other network devices.

The [Switch_factory](#) gets constructed when the net switch application gets started. It thereafter gets registered on the switch's server to serve IPC `create` calls.

Definition at line 93 of file [main.cc](#).

16.427.2 Member Function Documentation

16.427.2.1 op_create()

```
long Switch_factory::op_create (
    L4::Factory::Rights ,
    L4::Ipc::Cap< void > & res,
    l4_umword_t type,
    L4::Ipc::Varg_list_ref va ) [inline]
```

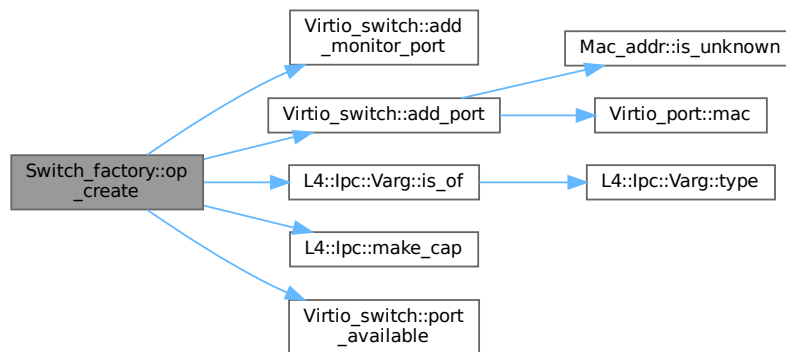

Handle factory protocol.

This function is invoked after an incoming factory::create request and creates a new port if possible.

Definition at line 396 of file [main.cc](#).

References [Virtio_switch::add_monitor_port\(\)](#), [Virtio_switch::add_port\(\)](#), [L4::Ipc::Varg::is_of\(\)](#), [L4_CAP_FPAGE_RWSD](#), [L4_EINVAL](#), [L4_ENOMEM](#), [L4_EOK](#), [L4::Ipc::make_cap\(\)](#), and [Virtio_switch::port_available\(\)](#).

16.428 Virtio_net Class Reference

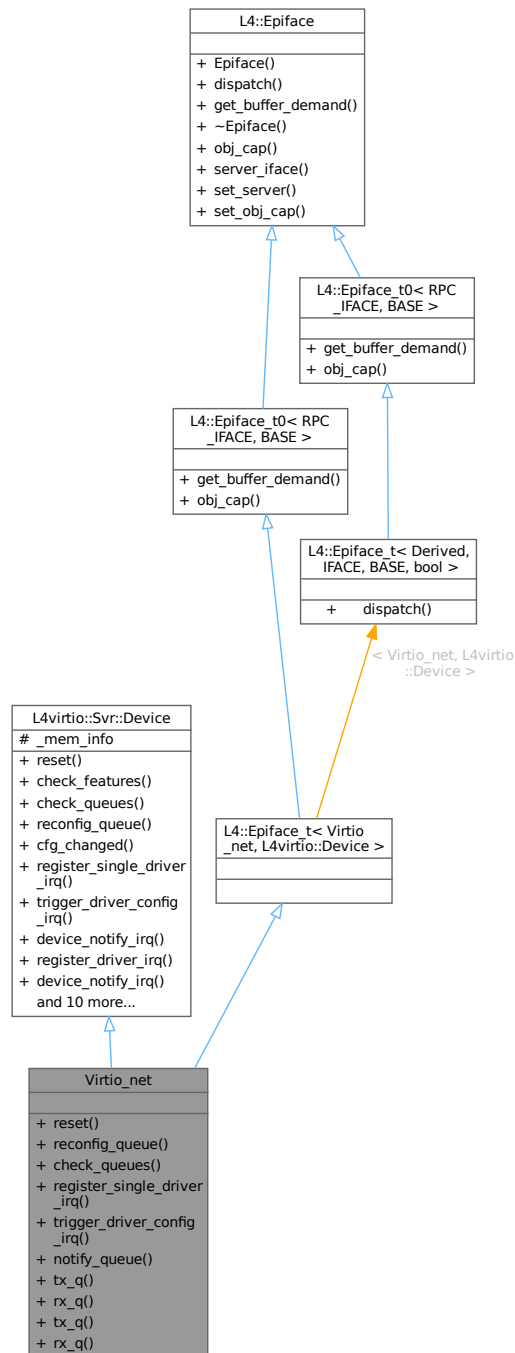

The Base class of a Port.

```
#include <virtio_net.h>
```

Inheritance diagram for Virtio_net:

Collaboration diagram for Virtio_net:

Public Member Functions

- void **reset** () override
reset callback, called for doing a device reset
- int **reconfig_queue** (unsigned index) override
callback for client queue-config request
- bool **check_queues** () override

- Check whether both virtqueues are ready.*

 - void **register_single_driver_irq** () override

Save the `_kick_guest_irq` that the client sent via `device_notification_irq()`.
- void **trigger_driver_config_irq** () override

callback for triggering configuration change notification IRQ
- void **notify_queue** (L4virtio::Svr::Virtqueue *queue)

Trigger the `_kick_guest_irq` IRQ.
- Virtqueue * **tx_q** ()

Getter for the transmission queue.
- Virtqueue * **rx_q** ()

Getter for the receive queue.
- Virtqueue const * **tx_q** () const

Getter for the transmission queue.
- Virtqueue const * **rx_q** () const

Getter for the receive queue.

Public Member Functions inherited from L4virtio::Svr::Device_t< DATA >

- virtual bool **check_features** ()

callback for checking the subset of accepted features
- virtual void **cfg_changed** (unsigned)

callback for client device configuration changes
- virtual L4::Cap< L4::Irq > **device_notify_irq** () const

callback to gather the device notification IRQ (old-style)
- virtual void **register_driver_irq** (unsigned idx)

Callback for registering an notification IRQ (multi IRQ).
- virtual L4::Cap< L4::Irq > **device_notify_irq** (unsigned idx)

Callback to gather the device notification IRQ (multi IRQ).
- virtual unsigned **num_events_supported** () const

Return the highest notification index supported.
- **Device_t** (Dev_config *dev_config)

Make a device for the given config.
- Mem_list const * **mem_info** () const

Get the memory region list used for this device.
- void **reset_queue_config** (unsigned idx, unsigned num_max, bool inc_generation=false)

Trigger reset for the configuration space for queue idx.
- void **init_mem_info** (unsigned num)

Initialize the memory region list to the given maximum.
- void **device_error** ()

Transition device into `DEVICE_NEEDS_RESET` state.
- bool **setup_queue** (Virtqueue *q, unsigned qn, unsigned num_max)

Enable/disable the specified queue.
- bool **handle_mem_cmd_write** ()

Check for a value in the `cmd` register and handle a write.
- void **enable_trusted_ds_validation** ()

Enable trusted dataspace validation.
- void **add_trusted_dataspaces** (std::shared_ptr< Ds_vector const > ds)

Provide a list of trusted dataspaces that can be used for validation.

Public Member Functions inherited from [L4::Epiface_t0< RPC_IFACE, BASE >](#)

- [Type_info::Demand](#) **get_buffer_demand** () const
Get the server-side buffer demand based in IFACE.
- [Cap< RPC_IFACE >](#) **obj_cap** () const
Get the (typed) capability to this object.

Public Member Functions inherited from [L4::Epiface](#)

- **Epiface** ()
Make a server object.
- virtual **~Epiface** ()=0
Destroy the object.
- Stored_cap [obj_cap](#) () const
Get the capability to the kernel object belonging to this object.
- [Server_iface](#) * [server_iface](#) () const
Get pointer to server interface at which the object is currently registered.
- int **set_server** ([Server_iface](#) *srv, [Cap< void >](#) cap, bool managed=false)
Set server registration info for the object.
- void **set_obj_cap** ([Cap< void >](#) const &cap)
Deprecated server registration function.

Additional Inherited Members

Public Types inherited from [L4::Epiface_t0< RPC_IFACE, BASE >](#)

- typedef [RPC_IFACE](#) **Interface**
Data type of the IPC interface definition.

Public Types inherited from [L4::Epiface](#)

- typedef [lpc_svr::Server_iface](#) **Server_iface**
Type for abstract server interface.
- typedef [lpc_svr::Server_iface::Demand](#) **Demand**
Type for server-side receive buffer demand.

Protected Attributes inherited from [L4virtio::Svr::Device_t< DATA >](#)

- **Mem_list_mem_info**
Memory region list.

16.428.1 Detailed Description

The Base class of a Port.

This class provides the Virtio network protocol specific implementation aspects of a port.

[Virtio_net](#) comprises the virtqueues for both, the incoming and the outgoing network requests:

- The transmission queue, containing requests to be transmitted to other ports. The transmission queue is filled by the client, this port relates to.
- The receive queue, containing requests that have been transmitted from other ports. The receive queue is filled by the switch.

Definition at line 71 of file [virtio_net.h](#).

16.428.2 Member Function Documentation

16.428.2.1 notify_queue()

```
void Virtio_net::notify_queue (
    L4virtio::Svr::Virtqueue * queue ) [inline]
```

Trigger the `_kick_guest_irq` IRQ.

This function gets called on the receiving port, when a request was successfully transmitted by the switch.

Definition at line 263 of file [virtio_net.h](#).

References [L4VIRTIO_IRQ_STATUS_VRING](#).

The documentation for this class was generated from the following file:

- `pkg/virtio-net-switch/server/switch/virtio_net.h`

16.429 Virtio_net_request Class Reference

Abstraction for a network request.

```
#include <request.h>
```

Collaboration diagram for `Virtio_net_request`:

Public Member Functions

- `const uint8_t * buffer (size_t *size) const`
Get the location and size of the current buffer.
- `Mac_addr dst_mac () const`
Get the Mac address of the destination port.
- `Mac_addr src_mac () const`
Get the Mac address of the source port.

Static Public Member Functions

- `static void drop_requests (Virtio_net *dev, L4virtio::Svr::Virtqueue *queue)`
Drop all requests of a specific queue.
- `static std::optional< Virtio_net_request > get_request (Virtio_net *dev, L4virtio::Svr::Virtqueue *queue)`
Construct a request from the next entry of a provided queue.

16.429.1 Detailed Description

Abstraction for a network request.

A [Virtio_net_request](#) is constructed by the source port, using the static function [get_request \(\)](#) as part of [Virtio_port::get_tx_request \(\)](#).

On destruction, [finish \(\)](#) will be called, which, will trigger the client IRQ of the source client.

Definition at line 35 of file [request.h](#).

16.429.2 Member Function Documentation

16.429.2.1 [buffer\(\)](#)

```
const uint8_t * Virtio_net_request::buffer (
    size_t * size ) const [inline]
```

Get the location and size of the current buffer.

Parameters

| | | |
|------------------|-------------------|-----------------------------|
| <code>out</code> | <code>size</code> | Size of the current buffer. |
|------------------|-------------------|-----------------------------|

Returns

Address of the current buffer.

This function returns the address and size of the currently active buffer for this request. The buffer might only be a part of the request, which may consist of more than one buffer.

Definition at line 90 of file [request.h](#).

References [L4virtio::Svr::Data_buffer::left](#), and [L4virtio::Svr::Data_buffer::pos](#).

16.429.2.2 drop_requests()

```
static void Virtio_net_request::drop_requests (
    Virtio_net * dev,
    L4virtio::Svr::Virtqueue * queue ) [inline], [static]
```

Drop all requests of a specific queue.

This function is used for example to drop all requests in the transmission queue of a monitor port, since monitor ports are not allowed to transmit data.

Parameters

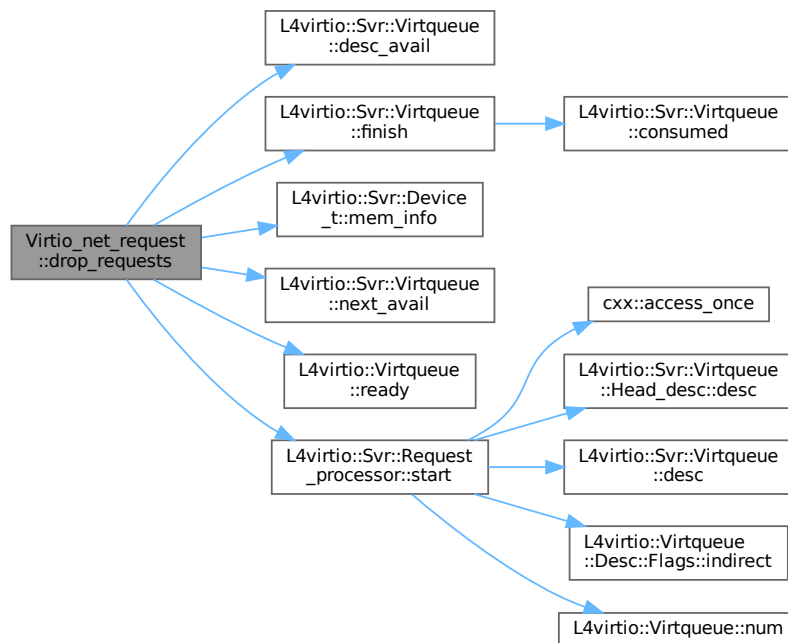

| | |
|--------------|------------------------------------|
| <i>dev</i> | Port of the provided virtqueue. |
| <i>queue</i> | Virtqueue to drop all requests of. |

Definition at line 222 of file [request.h](#).

References [L4virtio::Svr::Virtqueue::desc_avail\(\)](#), [L4virtio::Svr::Virtqueue::finish\(\)](#), [L4_UNLIKELY](#), [L4virtio::Svr::Device_t< DATA >::mem_info](#), [L4virtio::Svr::Virtqueue::next_avail\(\)](#), [L4virtio::Virtqueue::ready\(\)](#), and [L4virtio::Svr::Request_processor::start\(\)](#).

Referenced by [Virtio_port::drop_requests\(\)](#).

Here is the caller graph for this function:

16.429.2.3 get_request()

```
static std::optional< Virtio_net_request > Virtio_net_request::get_request (
    Virtio_net * dev,
    L4virtio::Svr::Virtqueue * queue ) [inline], [static]
```

Construct a request from the next entry of a provided queue.

Parameters

| | |
|--------------|---------------------------------------|
| <i>dev</i> | Port of the provided virtqueue. |
| <i>queue</i> | Virtqueue to extract next entry from. |

Definition at line 249 of file [request.h](#).

References [L4_UNLIKELY](#), [L4virtio::Svr::Virtqueue::next_avail\(\)](#), and [L4virtio::Virtqueue::ready\(\)](#).

Referenced by [Virtio_port::get_tx_request\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

The documentation for this class was generated from the following file:

- pkg/virtio-net-switch/server/switch/request.h

16.430 Virtio_net_transfer Class Reference

A network request to only a single destination.

```
#include <transfer.h>
```

Collaboration diagram for Virtio_net_transfer:

Static Public Member Functions

- static Result [transfer](#) ([Virtio_net_request](#) const &request, [Virtio_net](#) *dst_dev, [L4virtio::Svr::Virtqueue](#) *dst_queue, [Virtio_vlan_mangle](#) &mangle)

Deliver the request to the destination port.

16.430.1 Detailed Description

A network request to only a single destination.

A [Virtio_net_request](#) can have multiple destinations (being a broadcast request, for example). That is why it is processed by multiple [Virtio_net_transfers](#), each representing the delivery to a single destination port.

[Virtio_port::handle_request](#) uses the transfer function to move one packet to the destination of the request.

Definition at line 34 of file [transfer.h](#).

16.430.2 Member Function Documentation

16.430.2.1 transfer()

```
static Result Virtio_net_transfer::transfer (
    Virtio_net_request const & request,
    Virtio_net * dst_dev,
    L4virtio::Svr::Virtqueue * dst_queue,
    Virtio_vlan_mangle & mangle ) [inline], [static]
```

Deliver the request to the destination port.

Parameters

| | |
|------------------|--|
| <i>request</i> | The associated network request |
| <i>dst_dev</i> | The destination port |
| <i>dst_queue</i> | The Receive queue of the destination port |
| <i>mangle</i> | The VLAN packet rewriting handler for the transfer |

Exceptions

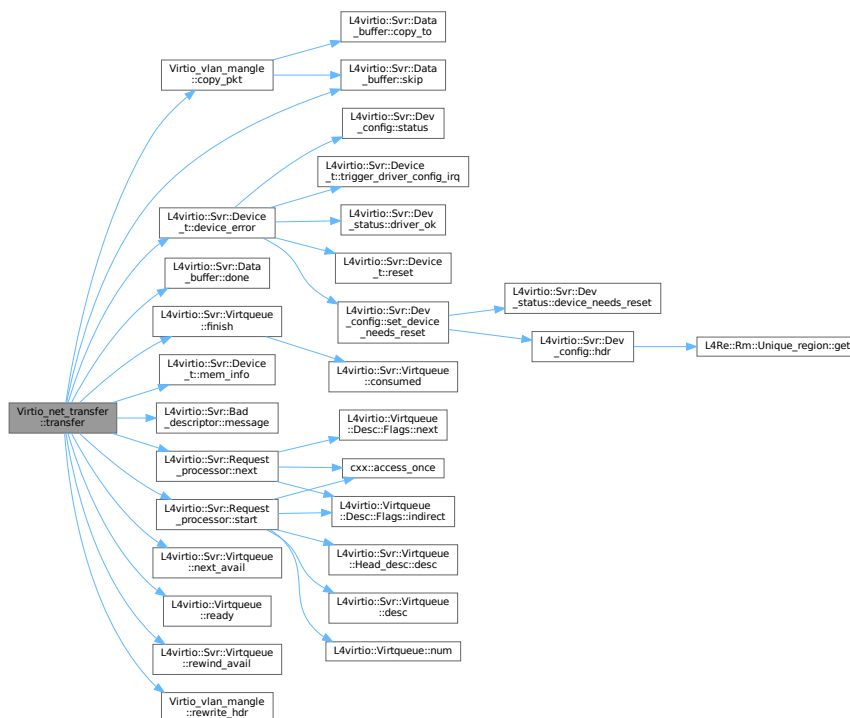

| | |
|---|-------------------------------------|
| L4virtio::Svr::Bad_descriptor | Exception raised in SRC port queue. |
|---|-------------------------------------|

Definition at line 53 of file [transfer.h](#).

A Port on the Virtio Net Switch.

```
#include <port.h>
```

Inheritance diagram for Virtio_port:

Collaboration diagram for Virtio_port:

Public Member Functions

- void [set_vlan_access](#) ([l4_uint16_t](#) id)
Set port as access port for a certain VLAN.
- void [set_vlan_trunk](#) (const std::vector< [l4_uint16_t](#) > &ids)
Set port as trunk port.
- void [set_monitor](#) ()

- Set this port as monitor port.
 - bool **match_vlan** (uint16_t id)
 - Match VLAN id.
 - **Mac_addr** mac () const
 - Get MAC address.
 - **Virtio_port** (unsigned vq_max, unsigned num_ds, char const *name, l4_uint8_t const *mac)
 - Create a Virtio net port object.
 - bool **tx_work_pending** () const
 - Check whether there is any work pending on the transmission queue.
 - std::optional< **Virtio_net_request** > **get_tx_request** ()
 - Get one request from the transmission queue.
 - void **drop_requests** ()
 - Drop all requests pending in the transmission queue.
 - void **handle_request** (Virtio_port *src_port, Virtio_net_request const &request)
 - Handle a request - send it to the guest associated with this port.

Public Member Functions inherited from **Virtio_net**

- void **reset** () override
 - reset callback, called for doing a device reset
- int **reconfig_queue** (unsigned index) override
 - callback for client queue-config request
- bool **check_queues** () override
 - Check whether both virtqueues are ready.
- void **register_single_driver_irq** () override
 - Save the `_kick_guest_irq` that the client sent via `device_notification_irq()`.
- void **trigger_driver_config_irq** () override
 - callback for triggering configuration change notification IRQ
- void **notify_queue** (L4virtio::Svr::Virtqueue *queue)
 - Trigger the `_kick_guest_irq` IRQ.
- Virtqueue * **tx_q** ()
 - Getter for the transmission queue.
- Virtqueue * **rx_q** ()
 - Getter for the receive queue.
- Virtqueue const * **tx_q** () const
 - Getter for the transmission queue.
- Virtqueue const * **rx_q** () const
 - Getter for the receive queue.

Public Member Functions inherited from **L4virtio::Svr::Device_t< DATA >**

- virtual bool **check_features** ()
 - callback for checking the subset of accepted features
- virtual void **cfg_changed** (unsigned)
 - callback for client device configuration changes
- virtual L4::Cap< L4::Irq > **device_notify_irq** () const
 - callback to gather the device notification IRQ (old-style)
- virtual void **register_driver_irq** (unsigned idx)
 - Callback for registering an notification IRQ (multi IRQ).

- virtual [L4::Cap< L4::Irq > device_notify_irq](#) (unsigned idx)
Callback to gather the device notification IRQ (multi IRQ).
- virtual unsigned [num_events_supported](#) () const
Return the highest notification index supported.
- [Device_t](#) ([Dev_config](#) *dev_config)
Make a device for the given config.
- [Mem_list](#) const * [mem_info](#) () const
Get the memory region list used for this device.
- void [reset_queue_config](#) (unsigned idx, unsigned num_max, bool inc_generation=false)
Trigger reset for the configuration space for queue idx.
- void [init_mem_info](#) (unsigned num)
Initialize the memory region list to the given maximum.
- void [device_error](#) ()
Transition device into DEVICE_NEEDS_RESET state.
- bool [setup_queue](#) ([Virtqueue](#) *q, unsigned qn, unsigned num_max)
Enable/disable the specified queue.
- bool [handle_mem_cmd_write](#) ()
Check for a value in the cmd register and handle a write.
- void [enable_trusted_ds_validation](#) ()
Enable trusted dataspace validation.
- void [add_trusted_dataspaces](#) (std::shared_ptr< [Ds_vector](#) const > ds)
Provide a list of trusted dataspace that can be used for validation.

Public Member Functions inherited from [L4::Epiface_t0< RPC_IFACE, BASE >](#)

- [Type_info::Demand](#) [get_buffer_demand](#) () const
Get the server-side buffer demand based in IFACE.
- [Cap< RPC_IFACE > obj_cap](#) () const
Get the (typed) capability to this object.

Public Member Functions inherited from [L4::Epiface](#)

- [Epiface](#) ()
Make a server object.
- virtual ~[Epiface](#) ()=0
Destroy the object.
- Stored_cap [obj_cap](#) () const
Get the capability to the kernel object belonging to this object.
- [Server_iface](#) * [server_iface](#) () const
Get pointer to server interface at which the object is currently registered.
- int [set_server](#) ([Server_iface](#) *srv, [Cap< void > cap](#), bool managed=false)
Set server registration info for the object.
- void [set_obj_cap](#) ([Cap< void > const &cap](#))
Deprecated server registration function.

Additional Inherited Members

Public Types inherited from [L4::Epiface_t0< RPC_IFACE, BASE >](#)

- typedef [RPC_IFACE](#) [Interface](#)
Data type of the IPC interface definition.

Public Types inherited from [L4::Epiface](#)

- typedef [lpc_svr::Server_iface](#) **Server_iface**
Type for abstract server interface.
- typedef [lpc_svr::Server_iface::Demand](#) **Demand**
Type for server-side receive buffer demand.

Protected Attributes inherited from [L4virtio::Svr::Device_t](#) < [DATA](#) >

- **Mem_list_mem_info**
Memory region list.

16.431.1 Detailed Description

A Port on the Virtio Net Switch.

A Port object gets created by `Virtio_factory::op_create()`. This function actually only instantiates objects of the types `Switch_port` and `Monitor_port`. The created Port registers itself at the switch's server. Usually, the IPC call for port creation comes from `ned`. To finalize the setup, the client has to initialize the port during the virtio initialization phase. To do this, the client registers a dataspace for queues and buffers and provides an IRQ to notify the client on incoming network requests.

Definition at line 35 of file [port.h](#).

16.431.2 Member Function Documentation

16.431.2.1 drop_requests()

```
void Virtio_port::drop_requests ( ) [inline]
```

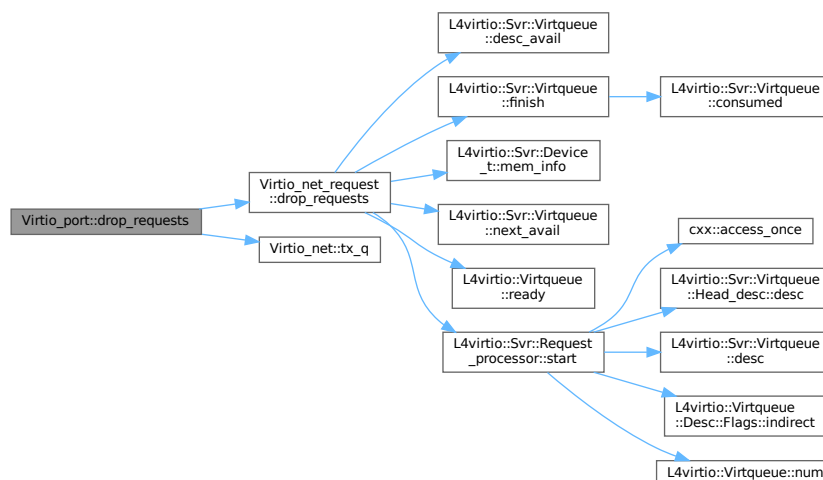

Drop all requests pending in the transmission queue.

This is used for monitor ports, which are not allowed to send packets.

Definition at line 225 of file [port.h](#).

References [Virtio_net_request::drop_requests\(\)](#), and [Virtio_net::tx_q\(\)](#).

Here is the call graph for this function:

16.431.2.2 handle_request()

```
void Virtio_port::handle_request (
    Virtio_port * src_port,
    Virtio_net_request const & request ) [inline]
```

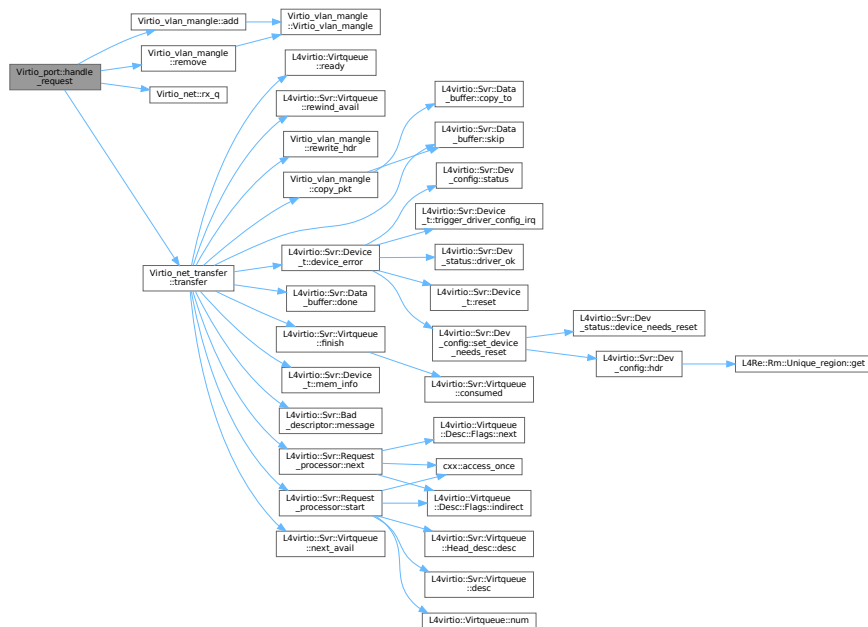

Handle a request - send it to the guest associated with this port.

We try to send a packet to the guest associated with this port. To do that, we create a [Virtio_net_transfer](#) object to keep any state related to this transaction. If the transfer is successful, we delete the transfer object.

Definition at line 236 of file [port.h](#).

References [Virtio_vlan_mangle::add\(\)](#), [Virtio_vlan_mangle::remove\(\)](#), [Virtio_net::rx_q\(\)](#), and [Virtio_net_transfer::transfer\(\)](#).

Here is the call graph for this function:

16.431.2.3 mac()

```
Mac_addr Virtio_port::mac ( ) const [inline]
```

Get MAC address.

Might be [Mac_addr::Addr_unknown](#) if this port has no explicit MAC address set.

Definition at line 156 of file [port.h](#).

Referenced by [Virtio_switch::add_port\(\)](#), and [Virtio_port\(\)](#).

Here is the caller graph for this function:

16.431.2.4 match_vlan()

```
bool Virtio_port::match_vlan (
    uint16_t id ) [inline]
```

Match VLAN id.

Parameters

| | |
|-----------|--|
| <i>id</i> | The VLAN id of the packet or VLAN_ID_NATIVE. |
|-----------|--|

Check whether VLAN *id* is switched on this port. Packets of native ports have the special VLAN_ID_NATIVE id.

Definition at line 137 of file [port.h](#).

16.431.2.5 set_monitor()

```
void Virtio_port::set_monitor ( ) [inline]
```

Set this port as monitor port.

Ensures that outgoing traffic will have a VLAN tag if the packet belongs to a VLAN. Packets coming from native ports will remain untagged.

Definition at line 123 of file [port.h](#).

16.431.2.6 set_vlan_access()

```
void Virtio_port::set_vlan_access (
    14_uint16_t id ) [inline]
```

Set port as access port for a certain VLAN.

Parameters

| | |
|-----------|--|
| <i>id</i> | The VLAN id for traffic on this port ($0 < id < 0xffff$) |
|-----------|--|

The port does not see VLAN tags but belongs to the given VLAN.

Definition at line 83 of file [port.h](#).

16.431.2.7 set_vlan_trunk()

```
void Virtio_port::set_vlan_trunk (
    const std::vector< l4_uint16_t > & ids ) [inline]
```

Set port as trunk port.

Parameters

| | |
|------------|---|
| <i>ids</i> | List of VLAN ids that are switched on this port |
|------------|---|

Incoming traffic on this port is expected to have a VLAN tag that matches one in *ids*. Outgoing traffic will be tagged if there is no tag in the Ethernet header yet.

Definition at line 100 of file [port.h](#).

The documentation for this class was generated from the following file:

- pkg/virtio-net-switch/server/switch/port.h

16.432 Virtio_switch Class Reference

The Virtio switch contains all ports and processes network requests.

```
#include <switch.h>
```

Collaboration diagram for Virtio_switch:

Public Member Functions

- [Virtio_switch](#) (unsigned max_ports)
Create a switch with n ports.
- bool [add_port](#) ([Virtio_port](#) *port)
Add a port to the switch.
- bool [add_monitor_port](#) ([Virtio_port](#) *port)
Add a monitor port to the switch.
- void [check_ports](#) ()
Check validity of ports.
- void [handle_port_irq](#) ([Virtio_port](#) *port)
Handle an incoming irq on a given port.
- int [port_available](#) (bool monitor)
Is there still a free port on this switch available?

16.432.1 Detailed Description

The Virtio switch contains all ports and processes network requests.

A Port on its own is not capable to process an incoming network request because it has no knowledge about other ports. The processing of an incoming request therefore gets delegated to the switch.

The [Virtio_switch](#) is constructed at the start of the Virtio Net Switch application. The factory saves a reference to it to pass it to the [Kick_irq](#) on port creation.

Definition at line 28 of file [switch.h](#).

16.432.2 Constructor & Destructor Documentation

16.432.2.1 Virtio_switch()

```
Virtio_switch::Virtio_switch (
    unsigned max_ports ) [explicit]
```

Create a switch with n ports.

Parameters

| | |
|---------------------------|----------------------------------|
| max_ports | maximal number of provided ports |
|---------------------------|----------------------------------|

Definition at line 12 of file [switch.cc](#).

16.432.3 Member Function Documentation

16.432.3.1 add_monitor_port()

```
bool Virtio_switch::add_monitor_port (
    Virtio_port * port )
```

Add a monitor port to the switch.

Parameters

| | |
|-------------|---|
| <i>port</i> | A pointer to an already constructed Virtio_port object. |
|-------------|---|

Return values

| | |
|--------------|--------------------------------------|
| <i>true</i> | Port was added successfully. |
| <i>false</i> | Switch was not able to add the port. |

Definition at line 55 of file [switch.cc](#).

Referenced by [Switch_factory::op_create\(\)](#).

Here is the caller graph for this function:

16.432.3.2 add_port()

```
bool Virtio_switch::add_port (  
    Virtio\_port * port )
```

Add a port to the switch.

Parameters

| | |
|-------------|---|
| <i>port</i> | A pointer to an already constructed Virtio_port object. |
|-------------|---|

Return values

| | |
|--------------|--------------------------------------|
| <i>true</i> | Port was added successfully. |
| <i>false</i> | Switch was not able to add the port. |

Definition at line 30 of file [switch.cc](#).

References [Mac_addr::is_unknown\(\)](#), and [Virtio_port::mac\(\)](#).

Referenced by [Switch_factory::op_create\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.432.3.3 check_ports()

```
void Virtio_switch::check_ports ( )
```

Check validity of ports.

Check whether all ports are still used and remove any unused (unreferenced) ports. Shall be invoked after an incoming cap deletion irq to remove ports without clients.

Definition at line 70 of file [switch.cc](#).

References [Mac_table< Size >::flush\(\)](#), and [L4::Epiface_t0< RPC_IFACE, BASE >::obj_cap\(\)](#).

Here is the call graph for this function:

16.432.3.4 handle_port_irq()

```
void Virtio_switch::handle_port_irq (
    Virtio_port * port )
```

Handle an incoming irq on a given port.

[Virtio_port](#) does not handle irq related stuff by itself. Someone else has to do this and has to handle incoming irqs. This function is supposed to be invoked after an irq related to the port came in.

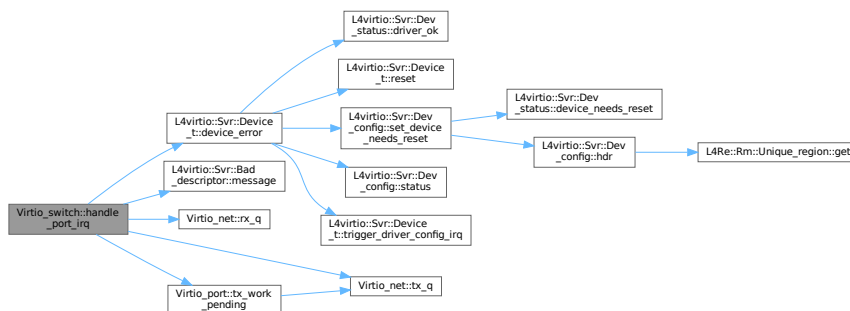

Parameters

| | |
|-------------|---|
| <i>port</i> | the Virtio_port an irq was triggered on |
|-------------|---|

Definition at line 143 of file [switch.cc](#).

References [L4virtio::Svr::Device_t< DATA >::device_error\(\)](#), [L4virtio::Svr::Bad_descriptor::message\(\)](#), [Virtio_net::rx_q\(\)](#), [Virtio_net::tx_q\(\)](#), and [Virtio_port::tx_work_pending\(\)](#).

Here is the call graph for this function:

16.432.3.5 port_available()

```
int Virtio_switch::port_available (
    bool monitor ) [inline]
```

Is there still a free port on this switch available?

Parameters

| | |
|----------------|-------------------------------------|
| <i>monitor</i> | True if we look for a monitor slot. |
|----------------|-------------------------------------|

Return values

| | |
|----------|--------------------------------|
| ≥ 0 | The next available port index. |
| -1 | No port available. |

Definition at line 123 of file [switch.h](#).

Referenced by [Switch_factory::op_create\(\)](#).

Here is the caller graph for this function:

- [Virtio_vlan_mangle](#) ()
Default constructor.
- [l4_uint32_t copy_pkt](#) ([Buffer](#) &dst, [Buffer](#) &src)
Copy packet from src to dst.
- void [rewrite_hdr](#) ([Virtio_net::Hdr](#) *hdr)
Rewrite the virtio network header.

Static Public Member Functions

- static constexpr [Virtio_vlan_mangle add](#) ([l4_uint16_t](#) tci)
Construct an object that adds a VLAN tag.
- static constexpr [Virtio_vlan_mangle remove](#) ()
Construct an object that removes the VLAN tag.

16.433.1 Detailed Description

Class for VLAN packet rewriting.

Definition at line 36 of file [vlan.h](#).

16.433.2 Constructor & Destructor Documentation

16.433.2.1 Virtio_vlan_mangle()

```
Virtio_vlan_mangle::Virtio_vlan_mangle ( ) [inline]
```

Default constructor.

The packet is not touched in any way.

Definition at line 52 of file [vlan.h](#).

Referenced by [add\(\)](#), and [remove\(\)](#).

Here is the caller graph for this function:

16.433.3 Member Function Documentation

16.433.3.1 add()

```
static constexpr Virtio\_vlan\_mangle Virtio_vlan_mangle::add (
    l4\_uint16\_t tci ) [inline], [static], [constexpr]
```

Construct an object that adds a VLAN tag.

Parameters

| | |
|------------|---------------------------------------|
| <i>tci</i> | The TCI field of the VLAN tag to add. |
|------------|---------------------------------------|

It is the callers responsibility to ensure that the packet is not already tagged.

Definition at line 64 of file [vlan.h](#).

References [Virtio_vlan_mangle\(\)](#).

Referenced by [Virtio_port::handle_request\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.433.3.2 copy_pkt()

```

14_uint32_t Virtio_vlan_mangle::copy_pkt (
    Buffer & dst,
    Buffer & src ) [inline]
  
```

Copy packet from *src* to *dst*.

Parameters

| | |
|------------|---------------------------|
| <i>src</i> | Source packet buffer |
| <i>dst</i> | Destination packet buffer |

Returns

The number of bytes copied

Copy the data from *src* to *dst*, possibly rewriting parts of the packet. The method is expected to be called repeatedly until the source packet is finished. Partial copies are allowed (including reading nothing from the source buffer) as long as progress is made, i.e. repeatedly calling this function eventually consumes the source buffer.

Definition at line 93 of file [vlan.h](#).

References [L4virtio::Svr::Data_buffer::copy_to\(\)](#), [L4_LIKELY](#), [L4virtio::Svr::Data_buffer::left](#), [L4virtio::Svr::Data_buffer::pos](#), and [L4virtio::Svr::Data_buffer::skip\(\)](#).

Referenced by [Virtio_net_transfer::transfer\(\)](#).

Here is the caller graph for this function:

**16.433.3.3 remove()**

```
static constexpr Virtio_vlan_mangle Virtio_vlan_mangle::remove ( ) [inline], [static], [constexpr]
```

Construct an object that removes the VLAN tag.

This object assumes that the Ethernet packet has a VLAN tag and will slavishly remove the necessary bytes from the packet.

Definition at line 75 of file [vlan.h](#).

References [Virtio_vlan_mangle\(\)](#).

Referenced by [Virtio_port::handle_request\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

16.433.3.4 rewrite_hdr()

```
void Virtio_vlan_mangle::rewrite_hdr (
    Virtio_net::Hdr * hdr ) [inline]
```

Rewrite the virtio network header.

Parameters

| | |
|------------|---------------------------------|
| <i>hdr</i> | The virtio header of the packet |
|------------|---------------------------------|

This method is called exactly once for every virtio network packet. Any necessary changes to the header are done in-place.

Definition at line 142 of file [vlan.h](#).

References [L4_UNLIKELY](#).

Referenced by [Virtio_net_transfer::transfer\(\)](#).

Here is the caller graph for this function:

The documentation for this class was generated from the following file:

- `pkg/virtio-net-switch/server/switch/vlan.h`

00050
00051            Broadcast address is FF:FF:FF:FF:FF:FF, multicast addresses have
00052            the LSB of the first octet set. Since this holds for both
00053            broadcast and multicast we test for the multicast bit here.
00054
00055            In our internal representation we store the bytes in reverse
00056            order, so we test the least significant bit of the least
00057            significant byte.

00155             * Header and csum offloading/general segmentation offloading
00156             *
00157             * We just copy the original header from source to
00158             * destination and have to consider three different
00159             * cases:
00160             * - no flags are set
00161             *   - we got a packet that is completely checksummed
00162             *     and correctly fragmented, there is nothing to
00163             *     do other than copying.
00164             * - virtio_net_hdr_f_needs_csum set
00165             *   - the packet is partially checksummed; if we would
00166             *     send the packet out on the wire we would have
00167             *     to calculate checksums now. But here we rely on
00168             *     the ability of our guest to handle partially
00169             *     checksummed packets and simply delegate the
00170             *     checksum calculation to them.
00171             * - gso_type != gso_none
00172             *   - the packet needs to be segmented; if we would
00173             *     send it out on the wire we would have to
00174             *     segment it now. But again we rely on the
00175             *     ability of our guest to handle gso
00176             *
00177             * We currently assume that our guests negotiated
00178             * virtio_net_f_guest_*, this needs to be checked in
00179             * the future.
00180             *
00181             * We also discussed the usage of
00182             * virtio_net_hdr_f_data_valid to remove the need to
00183             * checksum packets at all. But since our clients send
00184             * partially checksummed packets anyway the only

```

```

00184         * interesting case would be a packet without
00185         * net_hdr_f_needs_checksum set. In that case we would
00186         * signal that we checked the checksum and the
00187         * checksum is actually correct. Since we do not know
00188         * the origin of the packet (it could have been send
00189         * by an external node and could have been routed to
00190         * u) we can not signal this without actually
00191         * verifying the checksum. Otherwise a packet with an
00192         * invalid checksum could be successfully delivered.

Functions

- [l4_cpu_time_t l4_rdtsc](#) (void)
Read current value of CPU-internal timestamp counter.
- [l4_uint32_t l4_rdtsc_32](#) (void)
Read the lest significant 32 bit of the TSC.
- [l4_uint64_t l4_rdpmc](#) (int ecx)
Return current value of CPU-internal performance measurement counter.
- [l4_uint32_t l4_rdpmc_32](#) (int ecx)
Return the least significant 32 bit of a performance counter.
- [l4_uint64_t l4_tsc_to_ns](#) ([l4_cpu_time_t](#) tsc)
Convert timestamp to ns value.
- [l4_uint64_t l4_tsc_to_us](#) ([l4_cpu_time_t](#) tsc)
Convert timestamp into micro seconds value.
- void [l4_tsc_to_s_and_ns](#) ([l4_cpu_time_t](#) tsc, [l4_uint32_t](#) *s, [l4_uint32_t](#) *ns)
Convert timestamp to s.ns value.
- [l4_cpu_time_t l4_ns_to_tsc](#) ([l4_uint64_t](#) ns)
Convert nano seconds into CPU ticks.
- void [l4_busy_wait_ns](#) ([l4_uint64_t](#) ns)
Wait busy for a small amount of time.
- void [l4_busy_wait_us](#) ([l4_uint64_t](#) us)
Wait busy for a small amount of time.
- [l4_uint32_t l4_calibrate_tsc](#) ([l4_kernel_info_t](#) const *kip)
Determine scalers for timestamp calculations.
- [l4_uint32_t l4_tsc_init](#) ([l4_kernel_info_t](#) const *kip)
Initialize scaler for TSC calibrations from the kernel.
- [l4_uint32_t l4_get_hz](#) (void)
Get CPU frequency in Hz.

Functions

- `l4_cpu_time_t l4_rdtsc` (void)
Read current value of CPU-internal timestamp counter.
- `l4_uint32_t l4_rdtsc_32` (void)
Read the lest significant 32 bit of the TSC.
- `l4_uint64_t l4_rdpmc` (int ecx)
Return current value of CPU-internal performance measurement counter.
- `l4_uint32_t l4_rdpmc_32` (int ecx)
Return the least significant 32 bit of a performance counter.
- `l4_uint64_t l4_tsc_to_ns` (`l4_cpu_time_t` tsc)
Convert timestamp to ns value.
- `l4_uint64_t l4_tsc_to_us` (`l4_cpu_time_t` tsc)
Convert timestamp into micro seconds value.
- `void l4_tsc_to_s_and_ns` (`l4_cpu_time_t` tsc, `l4_uint32_t` *s, `l4_uint32_t` *ns)
Convert timestamp to s.ns value.
- `l4_cpu_time_t l4_ns_to_tsc` (`l4_uint64_t` ns)
Convert nano seconds into CPU ticks.
- `void l4_busy_wait_ns` (`l4_uint64_t` ns)
Wait busy for a small amount of time.
- `void l4_busy_wait_us` (`l4_uint64_t` us)
Wait busy for a small amount of time.
- `l4_uint32_t l4_calibrate_tsc` (`l4_kernel_info_t` const *kip)
Determine scalers for timestamp calculations.
- `l4_uint32_t l4_tsc_init` (`l4_kernel_info_t` const *kip)
Initialize scaler for TSC calibrations from the kernel.
- `l4_uint32_t l4_get_hz` (void)
Get CPU frequency in Hz.

17.72.1 Detailed Description

Segment handling (AMD64).

Definition in file [segment.h](#).

17.72.2 Enumeration Type Documentation

17.72.2.1 L4_sys_segment

```
enum L4_sys_segment
```

Constants for identifying segments.

Enumerator

| | |
|---------------------|--------------------------------------|
| L4_AMD64_SEGMENT_FS | Constant identifying the FS segment. |
| L4_AMD64_SEGMENT_GS | Constant identifying the GS segment. |

Definition at line 106 of file [segment.h](#).

17.72.2.2 L4_task_ldt_x86_consts

```
enum L4_task_ldt_x86_consts
```

Constants for LDT handling.

Enumerator

| | |
|-----------------------------|--|
| L4_TASK_LDT_X86_ENTRY_SIZE | Size of an LDT entry. |
| L4_TASK_LDT_X86_MAX_ENTRIES | Maximum number of LDT entries that can be written with one call. |

Definition at line 75 of file [segment.h](#).

17.72.3 Function Documentation

17.72.3.1 fiasco_amd64_segment_info()

```
long fiasco_amd64_segment_info (  
    l4_cap_idx_t thread,  
    unsigned * user_ds,  
    unsigned * user_cs,  
    unsigned * user32_cs,  
    l4_utcb_t * utcb ) [inline]
```

Get segment information.

Parameters

| | | |
|-----|------------------|--|
| in | <i>thread</i> | Thread to get info from. |
| out | <i>user_ds</i> | DS segment selector. |
| out | <i>user_cs</i> | 64-bit CS segment selector. |
| out | <i>user32_cs</i> | 32-bit CS segment selector. |
| | <i>utcb</i> | UTCB to be used for this operation, shall be the UTCB of the calling thread. See l4_utcb . |

Returns

System call error

Definition at line 175 of file [segment.h](#).

References [l4_ipc_call\(\)](#), [L4_IPC_NEVER](#), [l4_msgtag\(\)](#), [L4_PROTO_THREAD](#), [L4_THREAD_AMD64_GET_SEGMENT_INFO_OP](#), and [l4_msg_regs_t::mr](#).

Here is the call graph for this function:

17.72.3.2 fiasco_amd64_set_fs()

```

long fiasco_amd64_set_fs (
    l4_cap_idx_t thread,
    l4_umword_t base,
    l4_utcb_t * utcb ) [inline]

```

Set the base address for the FS segment.

Parameters

| | |
|---------------|--|
| <i>thread</i> | Thread for which the FS base address shall be modified. |
| <i>base</i> | Base address. |
| <i>utcb</i> | UTCB to be used for this operation, shall be the UTCB of the calling thread. See l4_utcb . |

Return values

| | |
|-------------------|--|
| <i>L4_EOK</i> | Success. |
| <i>-L4_EINVAL</i> | Invalid base address (<i>base</i>). |
| <i>-L4_ENOSYS</i> | Operation not supported with current kernel configuration. |

Note

Calling this function is equivalent to calling `fiasco_amd64_set_segment_base(thread, L4_↔AMD64_SEGMENT_FS, base, utcb)`.

Definition at line 24 of file [segment.h](#).

References [L4_AMD64_SEGMENT_FS](#), [l4_ipc_call\(\)](#), [L4_IPC_NEVER](#), [l4_msgtag\(\)](#), [L4_PROTO_THREAD](#), [L4_THREAD_AMD64_SET_SEGMENT_BASE_OP](#), and [l4_msg_regs_t::mr](#).

Here is the call graph for this function:

**17.72.3.3 fiasco_amd64_set_segment_base()**

```

long fiasco_amd64_set_segment_base (
    l4_cap_idx_t thread,
    enum L4_sys_segment segr,
    l4_umword_t base,
    l4_utcb_t * utcb ) [inline]
  
```

Set the base address for a segment.

Parameters

| | |
|---------------|--|
| <i>thread</i> | Thread for which the base address of the selected segment shall be modified. |
| <i>segr</i> | Segment to modify (one of L4_sys_segment). |
| <i>base</i> | Base address. |
| <i>utcb</i> | UTCB to be used for this operation, shall be the UTCB of the calling thread. See l4_utcb . |

Return values

| | |
|-------------------|--|
| <i>L4_EOK</i> | Success. |
| <i>-L4_EINVAL</i> | Invalid segment (<i>segr</i>) or base address (<i>base</i>). |
| <i>-L4_ENOSYS</i> | Operation not supported with current kernel configuration. |

Definition at line 32 of file [segment.h](#).

l4f-specific fs/gs manipulation (AMD64).

```
#include <l4/sys/compiler.h>
```

Include dependency graph for segment.h:

Functions

- long [fiasco_amd64_set_fs](#) ([l4_cap_idx_t](#) thread, [l4_umword_t](#) base, [l4_utcb_t](#) *utcb)
Set the base address for the FS segment.
- long [fiasco_amd64_set_segment_base](#) ([l4_cap_idx_t](#) thread, enum [L4_sys_segment](#) segr, [l4_umword_t](#) base, [l4_utcb_t](#) *utcb)
Set the base address for a segment.
- long [fiasco_gdt_set](#) ([l4_cap_idx_t](#) thread, void *desc, unsigned int size, unsigned int entry_number_start, [l4_utcb_t](#) *utcb)
Set GDT segment descriptors.

17.74.1 Detailed Description

l4f-specific fs/gs manipulation (AMD64).

Definition in file [segment.h](#).

17.74.2 Function Documentation

17.74.2.1 [fiasco_amd64_set_fs\(\)](#)

```
long fiasco_amd64_set_fs (  
    l4\_cap\_idx\_t thread,  
    l4\_umword\_t base,  
    l4\_utcb\_t * utcb ) [inline]
```

Set the base address for the FS segment.

Parameters

| | |
|---------------|--|
| <i>thread</i> | Thread for which the FS base address shall be modified. |
| <i>base</i> | Base address. |
| <i>utcb</i> | UTCB to be used for this operation, shall be the UTCB of the calling thread. See l4_utcb . |

Return values

| | |
|-------------------|--|
| <i>L4_EOK</i> | Success. |
| <i>-L4_EINVAL</i> | Invalid base address (<i>base</i>). |
| <i>-L4_ENOSYS</i> | Operation not supported with current kernel configuration. |

Note

Calling this function is equivalent to calling `fiasco_amd64_set_segment_base(thread, L4_↔AMD64_SEGMENT_FS, base, utcb)`.

Definition at line 24 of file [segment.h](#).

References [L4_AMD64_SEGMENT_FS](#), [l4_ipc_call\(\)](#), [L4_IPC_NEVER](#), [l4_msgtag\(\)](#), [L4_PROTO_THREAD](#), [L4_THREAD_AMD64_SET_SEGMENT_BASE_OP](#), and [l4_msg_regs_t::mr](#).

Here is the call graph for this function:

17.74.2.2 fiasco_amd64_set_segment_base()

```

long fiasco_amd64_set_segment_base (
    l4_cap_idx_t thread,
    enum L4_sys_segment sgr,
    l4_umword_t base,
    l4_utcb_t * utcb ) [inline]

```

Set the base address for a segment.

Parameters

| | |
|---------------|--|
| <i>thread</i> | Thread for which the base address of the selected segment shall be modified. |
| <i>sgr</i> | Segment to modify (one of L4_sys_segment). |
| <i>base</i> | Base address. |
| <i>utcb</i> | UTCB to be used for this operation, shall be the UTCB of the calling thread. See l4_utcb . |

Return values

| | |
|-------------------------|--|
| <code>L4_EOK</code> | Success. |
| <code>-L4_EINVAL</code> | Invalid segment (<code>segr</code>) or base address (<code>base</code>). |
| <code>-L4_ENOSYS</code> | Operation not supported with current kernel configuration. |

x86 port I/O

```
#include <l4/sys/l4int.h>
#include <l4/sys/compiler.h>
```

Include dependency graph for `port_io.h`:

This graph shows which files directly or indirectly include this file:

Functions

- `l4_uint8_t l4util_in8 (l4_uint16_t port)`
Read byte from I/O port.
- `l4_uint16_t l4util_in16 (l4_uint16_t port)`
Read 16-bit-value from I/O port.
- `l4_uint32_t l4util_in32 (l4_uint16_t port)`
Read 32-bit-value from I/O port.
- `void l4util_ins8 (l4_uint16_t port, l4_umword_t addr, l4_umword_t count)`
Read a block of 8-bit-values from I/O ports.
- `void l4util_ins16 (l4_uint16_t port, l4_umword_t addr, l4_umword_t count)`
Read a block of 16-bit-values from I/O ports.

- void `l4util_ins32` (`l4_uint16_t` port, `l4_umword_t` addr, `l4_umword_t` count)
Read a block of 32-bit-values from I/O ports.
- void `l4util_out8` (`l4_uint8_t` value, `l4_uint16_t` port)
Write byte to I/O port.
- void `l4util_out16` (`l4_uint16_t` value, `l4_uint16_t` port)
Write 16-bit-value to I/O port.
- void `l4util_out32` (`l4_uint32_t` value, `l4_uint16_t` port)
Write 32-bit-value to I/O port.
- void `l4util_outs8` (`l4_uint16_t` port, `l4_umword_t` addr, `l4_umword_t` count)
Write a block of bytes to I/O port.
- void `l4util_outs16` (`l4_uint16_t` port, `l4_umword_t` addr, `l4_umword_t` count)
Write a block of 16-bit-values to I/O port.
- void `l4util_outs32` (`l4_uint16_t` port, `l4_umword_t` addr, `l4_umword_t` count)
Write block of 32-bit-values to I/O port.
- void `l4util_iodelay` (void)
delay I/O port access by writing to port 0x80

Memory access functions (ARM specific)

```

#include <l4/sys/compiler.h>
#include <l4/sys/syscall_defs.h>

```

Include dependency graph for mem_op.h:

Enumerations

- enum `L4_mem_op_widths` { `L4_MEM_WIDTH_1BYTE` = 0, `L4_MEM_WIDTH_2BYTE` = 1, `L4_MEM_WIDTH_4BYTE` = 2 }
- Memory access width definitions.*

Functions

- unsigned long [l4_mem_read](#) (unsigned long virtaddress, unsigned width)
Read user task memory from kernel privilege level.
- void [l4_mem_write](#) (unsigned long virtaddress, unsigned width, unsigned long value)
Write user task memory from kernel privilege level.
- unsigned long [l4_mem_arm_op_call](#) (unsigned long op, unsigned long va, unsigned long width, unsigned long value)
Implementations.

00019 /*
00020  * Note: The following Assembler statement may produce wrong code:
00021  *   asm volatile ("btsl %1, %2" : "=ccc"(r) : "Jr"(63), "m"(m) : "memory");
00022  *
00023  * The compiler might chose the first variant because the bit number is smaller
00024  * than 64. However, 'bts' is encoded as 32-bit variant ('btsl') and thus only
00025  * supports immediate bit values up to 31. Some assemblers support immediate

```

```

00026  * offsets > 31 by adapting the memory address accordingly but GAS does not.
00027  * With GAS, the instruction will encode an immediate value of 63 but the CPU
00028  * will set bit 31 instead of bit 63!
00029  *
00030  * Therefore, if we would use 'btsl' instead of 'btsq', the correct constraint
00031  * for the bit number parameter would be "Ir" instead of "Jr".

```

Include dependency graph for cpu.h:

Functions

- int [l4util_cpu_has_cpuid](#) (void)
Check whether the CPU supports the "cpuid" instruction.
- unsigned int [l4util_cpu_capabilities](#) (void)
Returns the CPU capabilities if the "cpuid" instruction is available.
- unsigned int [l4util_cpu_capabilities_nocheck](#) (void)
Returns the CPU capabilities.
- void [l4util_cpu_cpuid](#) (unsigned long mode, unsigned long *eax, unsigned long *ebx, unsigned long *ecx, unsigned long *edx)
Generic CPUID access function.

Include dependency graph for io.h:

Functions

- `l4_cap_idx_t l4io_request_icu` (void)
Request the ICU object of the client.
- `long l4io_request_iomem` (`l4_addr_t` phys, unsigned long size, int flags, `l4_addr_t` *virt)

- Request an IO memory region.*
- long [l4io_request_iomem_region](#) ([l4_addr_t](#) phys, [l4_addr_t](#) virt, unsigned long size, int flags)
- Request an IO memory region and map it to a specified region.*
- long [l4io_release_iomem](#) ([l4_addr_t](#) virt, unsigned long size)
- Release an IO memory region.*
- long [l4io_request_ioport](#) (unsigned portnum, unsigned len)
- Request an IO port region.*
- long [l4io_release_ioport](#) (unsigned portnum, unsigned len)
- Release an IO port region.*
- [l4io_device_handle_t](#) [l4io_get_root_device](#) (void)
- Get root device handle of the device bus.*
- int [l4io_iterate_devices](#) ([l4io_device_handle_t](#) *devhandle, [l4io_device_t](#) *dev, [l4io_resource_handle_t](#) *reshandle)
- Iterate over the device bus.*
- int [l4io_lookup_device](#) (const char *devname, [l4io_device_handle_t](#) *dev_handle, [l4io_device_t](#) *dev, [l4io_resource_handle_t](#) *res_handle)
- Find a device by name.*
- int [l4io_lookup_resource](#) ([l4io_device_handle_t](#) devhandle, enum [l4io_resource_types_t](#) type, [l4io_resource_handle_t](#) *reshandle, [l4io_resource_t](#) *res)
- Request a specific resource from a device description.*
- [l4_addr_t](#) [l4io_request_resource_iomem](#) ([l4io_device_handle_t](#) devhandle, [l4io_resource_handle_t](#) *reshandle)
- Request IO memory.*
- void [l4io_request_all_ioports](#) (void(*res_cb)([l4vbus_resource_t](#) const *res))
- Request all available IO-port resources.*
- int [l4io_has_resource](#) (enum [l4io_resource_types_t](#) type, [l4vbus_paddr_t](#) start, [l4vbus_paddr_t](#) end)
- Check if a resource is available.*

17.146.1 Function Documentation

17.146.1.1 [l4io_get_root_device\(\)](#)

```
l4io\_device\_handle\_t l4io\_get\_root\_device (
    void ) [inline]
```

Get root device handle of the device bus.

Returns

root device handle

Definition at line 256 of file [io.h](#).

17.146.1.2 [l4io_iterate_devices\(\)](#)

```
int l4io\_iterate\_devices (
    l4io\_device\_handle\_t * devhandle,
    l4io\_device\_t * dev,
    l4io\_resource\_handle\_t * reshandle )
```

Iterate over the device bus.

Parameters

| | | |
|---------|------------------|---|
| in, out | <i>devhandle</i> | Device handle to start iterating at. The next device handle is returned here. |
| out | <i>dev</i> | Device information, may be NULL. |
| out | <i>reshandle</i> | Resource handle. |

Returns

0 on success, error code otherwise

17.146.1.3 l4io_request_all_ioports()

```
void l4io_request_all_ioports (
    void(*) (l4vbus_resource_t const *res) res_cb )
```

Request all available IO-port resources.

Parameters

| | |
|---------------|--|
| <i>res_cb</i> | Callback function called for every port resource found, give NULL for no callback. |
|---------------|--|

17.146.1.4 l4io_request_icu()

```
l4_cap_idx_t l4io_request_icu (
    void )
```

Request the ICU object of the client.

Returns

Client ICU object, an invalid capability selector is returned if no ICU is available.

17.147 io.h

17.157 l4/cxx/basic_ostream File Reference

Basic IO stream.

This graph shows which files directly or indirectly include this file:

Data Structures

- class [L4::IOModifier](#)
Modifier class for the IO stream.

Namespaces

- namespace [L4](#)
[L4](#) low-level kernel interface.

Variables

- [IOModifier](#) const **L4::hex**
Modifies the stream to print numbers as hexadecimal values.
- [IOModifier](#) const **L4::dec**
Modifies the stream to print numbers as decimal values.

17.157.1 Detailed Description

Basic IO stream.

Definition in file [basic_ostream](#).

17.170 l4/cxx/bits/smart_ptr_list.h File Reference

Implementation of a list of smart-pointer-managed objects.

```
#include "../type_traits"
```

Include dependency graph for smart_ptr_list.h:

This graph shows which files directly or indirectly include this file:

Data Structures

- class `cxx::Bits::Smart_ptr_list_item< T, STORE_T >`
List item for an arbitrary item in a `Smart_ptr_list`.
- class `cxx::Bits::Smart_ptr_list< ITEM >`
List of smart-pointer-managed objects.

Namespaces

- namespace `cxx`
Our C++ library.
- namespace `cxx::Bits`
Internal helpers for the `cxx` package.

17.170.1 Detailed Description

Implementation of a list of smart-pointer-managed objects.

Definition in file [smart_ptr_list.h](#).

Include dependency graph for ipc_stream:

This graph shows which files directly or indirectly include this file:

Data Structures

- class `L4::lpc::Str_cp_in< T >`
Abstraction for extracting a zero-terminated string from an `lpc::Istream`.
- class `L4::lpc::Msg_ptr< T >`
Pointer to an element of type T in an `lpc::Istream`.
- class `L4::lpc::Istream`
Input stream for IPC unmarshalling.
- class `L4::lpc::Ostream`
Output stream for IPC marshalling.
- class `L4::lpc::Iostream`
Input/Output stream for IPC [un]marshalling.

Namespaces

- namespace [L4](#)
L4 low-level kernel interface.
- namespace [L4::lpc](#)
IPC related functionality.

Functions

- `template<typename T >`
`Internal::Buf_cp_out< T > L4::lpc::buf_cp_out (T const *v, unsigned long size)`
Insert an array into an [lpc::Ostream](#).
- `template<typename T >`
`Internal::Buf_cp_in< T > L4::lpc::buf_cp_in (T *v, unsigned long &size)`
Extract an array from an [lpc::Istream](#).
- `template<typename T >`
`Str_cp_in< T > L4::lpc::str_cp_in (T *v, unsigned long &size)`
Create a [Str_cp_in](#) for the given values.
- `template<typename T >`
`Msg_ptr< T > L4::lpc::msg_ptr (T *&p)`
Create an [Msg_ptr](#) to adjust the given pointer.
- `template<typename T >`
`Internal::Buf_in< T > L4::lpc::buf_in (T *&v, unsigned long &size)`
Return a pointer to stream array data.
- `L4::lpc::Istream & operator>> (L4::lpc::Istream &s, bool &v)`
*Extract one element of type *T* from the stream *s*.*
- `L4::lpc::Istream & operator>> (L4::lpc::Istream &s, l4_msgtag_t &v)`
*Extract the *L4* message tag from the stream *s*.*
- `template<typename T >`
`L4::lpc::Istream & operator>> (L4::lpc::Istream &s, L4::lpc::Internal::Buf_in< T > const &v)`
*Extract an array of *T* elements from the stream *s*.*
- `template<typename T >`
`L4::lpc::Istream & operator>> (L4::lpc::Istream &s, L4::lpc::Msg_ptr< T > const &v)`
*Extract an element of type *T* from the stream *s*.*
- `template<typename T >`
`L4::lpc::Istream & operator>> (L4::lpc::Istream &s, L4::lpc::Str_cp_in< T > const &v)`
Extract a zero-terminated string from the stream.
- `L4::lpc::Ostream & operator<< (L4::lpc::Ostream &s, bool v)`
*Insert an element to type *T* into the stream *s*.*
- `L4::lpc::Ostream & operator<< (L4::lpc::Ostream &s, l4_msgtag_t const &v)`
*Insert the *L4* message tag into the stream *s*.*
- `template<typename T >`
`L4::lpc::Ostream & operator<< (L4::lpc::Ostream &s, L4::lpc::Internal::Buf_cp_out< T > const &v)`
*Insert an array with elements of type *T* into the stream *s*.*
- `L4::lpc::Ostream & operator<< (L4::lpc::Ostream &s, char const *v)`
*Insert a zero terminated character string into the stream *s*.*
- `template<typename T >`
`T L4::lpc::read (Istream &s)`
Read a value out of a stream.

L4::Ipc::Ostream & operator<< (
    L4::Ipc::Ostream & s,
    bool v ) [inline]
```

Insert an element to type `T` into the stream `s`.

Parameters

| | |
|----------------|---|
| <code>s</code> | The stream to insert the element <code>v</code> . |
| <code>v</code> | The element to insert. |

Returns

The stream `s`.

Definition at line 1197 of file [ipc_stream](#).

References [L4::Ipc::Ostream::put\(\)](#).

Here is the call graph for this function:

17.181.2.2 operator<<() [2/4]

```
L4::Ipc::Ostream & operator<< (
    L4::Ipc::Ostream & s,
    char const * v ) [inline]
```

Insert a zero terminated character string into the stream `s`.

Parameters

| | |
|----------|--|
| <i>s</i> | The stream to insert the string <i>v</i> . |
| <i>v</i> | The string to insert. |

Returns

The stream *s*.

This operator produces basically the same content as the array insertion, however the length of the array is calculated using `strlen(v) + 1`. The string is copied into the message including the trailing zero.

Definition at line 1269 of file `ipc_stream`.

References [L4::Ipc::Ostream::put\(\)](#).

Here is the call graph for this function:

**17.181.2.3 operator<<() [3/4]**

```

template<typename T >
L4::Ipc::Ostream & operator<< (
    L4::Ipc::Ostream & s,
    L4::Ipc::Internal::Buf_cp_out< T > const & v ) [inline]
  
```

Insert an array with elements of type *T* into the stream *s*.

Parameters

| | |
|----------|--|
| <i>s</i> | The stream to insert the array <i>v</i> . |
| <i>v</i> | The array to insert (see <code>Ipc::Buf_cp_out()</code>). |

Returns

The stream *s*.

Definition at line 1248 of file `ipc_stream`.

References [L4::Ipc::Ostream::put\(\)](#).

Here is the call graph for this function:

17.181.2.4 operator<<() [4/4]

```
L4::Ipc::Ostream & operator<< (  
    L4::Ipc::Ostream & s,  
    l4_msgtag_t const & v ) [inline]
```

Insert the [L4](#) message tag into the stream *s*.

Parameters

| | |
|----------|---|
| <i>s</i> | The stream to insert the tag <i>v</i> . |
| <i>v</i> | The L4 message tag to insert. |

Returns

The stream *s*.

Note

Only one message tag can be inserted into a stream. Multiple insertions simply overwrite previous insertions.

Definition at line [1232](#) of file [ipc_stream](#).

References [L4::lpc::Ostream::tag\(\)](#).

Here is the call graph for this function:

17.181.2.5 operator>>() [1/6]

```
L4::Ipc::Istream & operator>> (  
    L4::Ipc::Istream & s,  
    bool & v ) [inline]
```

Extract one element of type T from the stream s.

Parameters

| | | |
|-----|----------|-----------------------------|
| | <i>s</i> | The stream to extract from. |
| out | <i>v</i> | Extracted value. |

Returns

The stream *s*.

Definition at line 1044 of file `ipc_stream`.

References [L4::Ipc::Istream::get\(\)](#).

Here is the call graph for this function:

**17.181.2.6 operator>>() [2/6]**

```

template<typename T >
L4::Ipc::Istream & operator>> (
    L4::Ipc::Istream & s,
    L4::Ipc::Internal::Buf_cp_in< T > const & v ) [inline]
  
```

Extract an array of *T* elements from the stream *s*.

Parameters

| | | |
|-----|----------|---|
| | <i>s</i> | The stream to extract from. |
| out | <i>v</i> | Buffer description to copy the array to (<code>Ipc::Buf_cp_out()</code>). |

Returns

The stream *s*.

This operator does a copy out of the data into the given buffer.

See `Ipc::Buf_in`, `Ipc::Buf_cp_in`, and `Ipc::Buf_cp_out`.

Definition at line 1151 of file `ipc_stream`.

References [L4::Ipc::Istream::get\(\)](#).

Here is the call graph for this function:

17.181.2.7 operator>>() [3/6]

```

template<typename T >
L4::Ipc::Istream & operator>> (
    L4::Ipc::Istream & s,
    L4::Ipc::Internal::Buf_in< T > const & v ) [inline]
  
```

Extract an array of T elements from the stream s.

Parameters

| | | |
|-----|---|--|
| | s | The stream to extract from. |
| out | v | Pointer to the extracted array (ipc_buf_in()). |

Returns

The stream s.

This operator actually does not copy out the data in the array, but returns a pointer into the message buffer itself. This means that the data is only valid as long as there is no new data inserted into the stream.

Note

If array does not fit into transmitted words size will be set to zero. Client has to implement check against zero.

See `lpc::Buf_in`, `lpc::Buf_cp_in`, and `lpc::Buf_cp_out`.

Definition at line 1103 of file `ipc_stream`.

17.181.2.8 operator>>() [4/6]

```
template<typename T >
L4::Ipc::Istream & operator>> (
    L4::Ipc::Istream & s,
    L4::Ipc::Msg_ptr< T > const & v ) [inline]
```

Extract an element of type `T` from the stream `s`.

Parameters

| | | |
|------------------|----------------|-----------------------------------|
| | <code>s</code> | The stream to extract from. |
| <code>out</code> | <code>v</code> | Pointer to the extracted element. |

Returns

The stream `s`.

This operator actually does not copy out the data, but returns a pointer into the message buffer itself. This means that the data is only valid as long as there is no new data inserted into the stream.

See `Msg_ptr`.

17.199 l4/cxx/ref_ptr_list File Reference

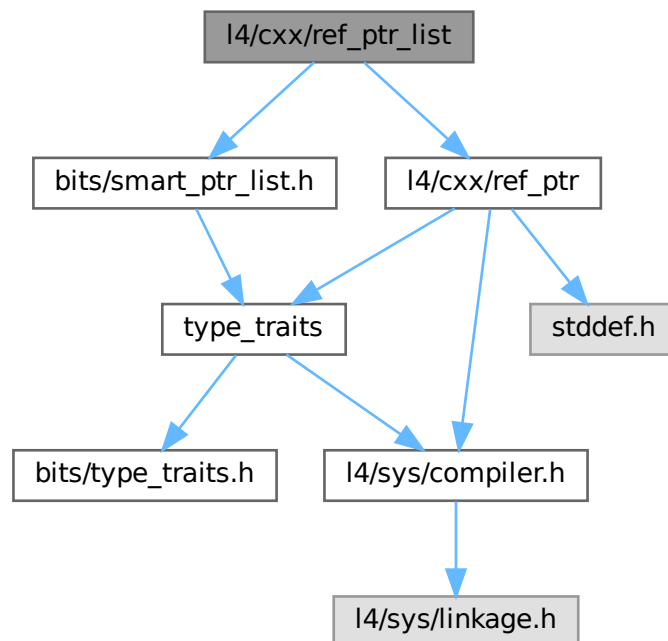

Implementation of a list of ref-ptr-managed objects.

```

#include <l4/cxx/ref_ptr>
#include "bits/smart_ptr_list.h"

```

Include dependency graph for ref_ptr_list:

Data Structures

- `struct cxx::Ref_obj_list_item< T >`
Item for list linked via `cxx::Ref_ptr` with default reference counting.

Namespaces

- namespace [cxx](#)
Our C++ library.

Typedefs

- `template<typename T>`
using `cxx::Ref_ptr_list_item` = `Bits::Smart_ptr_list_item< T, cxx::Ref_ptr< T> >`
Item for list linked with [cxx::Ref_ptr](#).
- `template<typename T>`
using `cxx::Ref_ptr_list` = `Bits::Smart_ptr_list< Ref_ptr_list_item< T> >`
Single-linked list where elements are connected via a [cxx::Ref_ptr](#).

17.199.1 Detailed Description

Implementation of a list of ref-ptr-managed objects.

17.208 l4/cxx/string.h File Reference

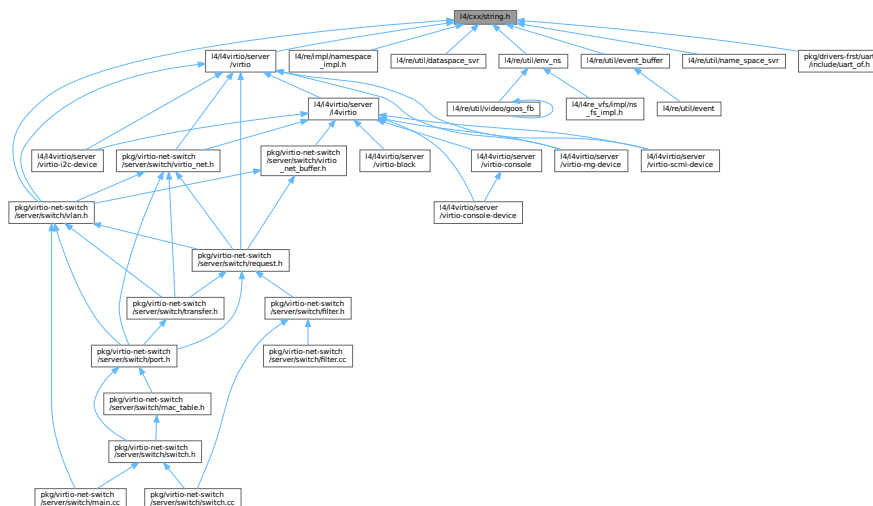

String.

```
#include <l4/cxx/basic_ostream>
```

Include dependency graph for string.h:

This graph shows which files directly or indirectly include this file:

Data Structures

- class [L4::String](#)

A null-terminated string container class.

Namespaces

- namespace [L4](#)
L4 low-level kernel interface.

17.208.1 Detailed Description

String.

Definition in file [string.h](#).

IRQ handling routines.

```

#include <l4/sys/compiler.h>
#include <l4/sys/types.h>

```

Include dependency graph for irq.h:

Functions

- `l4irq_t * l4irq_attach (int irqnum)`
Attach/connect to IRQ.
- `l4irq_t * l4irq_attach_ft (int irqnum, unsigned mode)`
Attach/connect to IRQ using given type.
- `l4irq_t * l4irq_attach_thread (int irqnum, l4_cap_idx_t to_thread)`
Attach/connect to IRQ.
- `l4irq_t * l4irq_attach_thread_ft (int irqnum, l4_cap_idx_t to_thread, unsigned mode)`
Attach/connect to IRQ using given type.
- `long l4irq_wait (l4irq_t *irq)`
Wait for specified IRQ.
- `long l4irq_unmask_and_wait_any (l4irq_t *unmask_irq, l4irq_t **ret_irq)`
Unmask a specific IRQ and wait for any attached IRQ.
- `long l4irq_wait_any (l4irq_t **irq)`
Wait for any attached IRQ.
- `long l4irq_unmask (l4irq_t *irq)`
Unmask a specific IRQ.
- `long l4irq_detach (l4irq_t *irq)`
Detach from IRQ.
- `l4irq_t * l4irq_request (int irqnum, void(*isr_handler)(void *), void *isr_data, int irq_thread_prio, unsigned mode)`
Attach asynchronous ISR handler to IRQ.
- `long l4irq_release (l4irq_t *irq)`
Release asynchronous ISR handler and free resources.
- `l4irq_t * l4irq_attach_cap (l4_cap_idx_t irqcap)`
Attach/connect to IRQ.
- `l4irq_t * l4irq_attach_cap_ft (l4_cap_idx_t irqcap, unsigned mode)`
Attach/connect to IRQ using given type.
- `l4irq_t * l4irq_attach_thread_cap (l4_cap_idx_t irqcap, l4_cap_idx_t to_thread)`

Attach/connect to IRQ.

- `l4irq_t * l4irq_attach_thread_cap_ft (l4_cap_idx_t irqcap, l4_cap_idx_t to_thread, unsigned mode)`

Attach/connect to IRQ using given type.

- `l4irq_t * l4irq_request_cap (l4_cap_idx_t irqcap, void(*isr_handler)(void *), void *isr_data, int irq_thread_↵prio, unsigned mode)`

Attach asynchronous ISR handler to IRQ.

Definition in file [irq.h](#).

17.225.2 Function Documentation

17.225.2.1 l4util_irq_acknowledge()

```
void l4util_irq_acknowledge (
    unsigned int irq ) [inline]
```

Acknowledge IRQ at PIC in fully special nested mode.

Parameters

| | |
|------------|------------------------------------|
| <i>irq</i> | number of interrupt to acknowledge |
|------------|------------------------------------|

Definition at line 64 of file [irq.h](#).

References [l4util_in8\(\)](#), and [l4util_out8\(\)](#).

Here is the call graph for this function:

```

Enumerations

- enum [Libedid_consts](#) { [Libedid_block_size](#) = 128 }
EDID constants.

Functions

- int [libedid_check_header](#) (const unsigned char *edid)
Check for valid EDID header.
- int [libedid_checksum](#) (const unsigned char *edid)
Calculates the EDID checksum.
- unsigned [libedid_version](#) (const unsigned char *edid)
Returns the EDID version number.
- unsigned [libedid_revision](#) (const unsigned char *edid)
Returns the EDID revision number.
- void [libedid_pnp_id](#) (const unsigned char *edid, unsigned char *id)
Extracts the display's PnP ID.
- void [libedid_prefered_resolution](#) (const unsigned char *edid, unsigned *w, unsigned *h)
Extract the display's prefered mode.
- unsigned [libedid_num_ext_blocks](#) (const unsigned char *edid)
Get the number of EDID extension blocks.
- unsigned [libedid_dump_standard_timings](#) (const unsigned char *edid)
Dump the standard timings to stdout.
- void [libedid_dump](#) (const unsigned char *edid)
Dump raw EDID data to stdout.

Data space C interface.

```
#include <l4/sys/types.h>
```

Include dependency graph for dataspace.h:

This graph shows which files directly or indirectly include this file:

Data Structures

- struct `l4re_ds_stats_t`
Information about the data space.

Typedefs

- typedef `l4_cap_idx_t l4re_ds_t`
Dataspace type.

Enumerations

- enum `l4re_ds_map_flags` { }
Flags to specify the memory mapping type of a request.

Functions

- long [l4re_ds_clear](#) ([l4re_ds_t](#) ds, [l4re_ds_offset_t](#) offset, [l4re_ds_size_t](#) size) [L4_NOTHROW](#)
Clear parts of a dataspace.
- long [l4re_ds_allocate](#) ([l4re_ds_t](#) ds, [l4re_ds_offset_t](#) offset, [l4re_ds_size_t](#) size) [L4_NOTHROW](#)
Allocate a range in the dataspace.
- int [l4re_ds_copy_in](#) ([l4re_ds_t](#) ds, [l4re_ds_offset_t](#) dst_offs, [l4re_ds_t](#) src, [l4re_ds_offset_t](#) src_offs, [l4re_ds_size_t](#) size) [L4_NOTHROW](#)
Copy contents from another dataspace.
- [l4re_ds_size_t](#) [l4re_ds_size](#) ([l4re_ds_t](#) ds) [L4_NOTHROW](#)
Get size of a dataspace.
- [l4re_ds_flags_t](#) [l4re_ds_flags](#) ([l4re_ds_t](#) ds) [L4_NOTHROW](#)
Get flags of the dataspace.
- int [l4re_ds_info](#) ([l4re_ds_t](#) ds, [l4re_ds_stats_t](#) *stats) [L4_NOTHROW](#)
Get information on the dataspace.
- int [l4re_ds_map_info](#) ([l4re_ds_t](#) ds, [l4_addr_t](#) *start_addr, [l4_addr_t](#) *end_addr) [L4_NOTHROW](#)
Get mapping range of dataspace.

DMA space C interface.

```

#include <l4/sys/types.h>
#include <l4/re/c/dataspace.h>

```

Include dependency graph for dma_space.h:

Typedefs

- typedef `l4_cap_idx_t` `l4re_dma_space_t`
DMA space capability type.
- typedef `l4_uint64_t` `l4re_dma_space_dma_addr_t`
Data type for DMA addresses.

Enumerations

- enum `l4re_dma_space_direction` { `L4RE_DMA_SPACE_BIDIRECTIONAL`, `L4RE_DMA_SPACE_TO_DEVICE`, `L4RE_DMA_SPACE_FROM_DEVICE`, `L4RE_DMA_SPACE_NONE` }
Direction of the DMA transfers.
- enum `l4re_dma_space_space_attrbs` { `L4RE_DMA_SPACE_COHERENT` = 1 << 0, `L4RE_DMA_SPACE_PHYS_SPACE` = 1 << 1 }
Attributes assigned to the DMA space when associated with a specific device.

Functions

- long `l4re_dma_space_map` (`l4re_dma_space_t` dma, `l4re_ds_t` src, `l4re_ds_offset_t` offset, `l4_size_t` *size, unsigned long attrs, enum `l4re_dma_space_direction` dir, `l4re_dma_space_dma_addr_t` *dma_addr) `L4_NOTHROW`
Map the given part of this data space into the DMA address space.
- long `l4re_dma_space_unmap` (`l4re_dma_space_t` dma, `l4re_dma_space_dma_addr_t` dma_addr, `l4_size_t` size, unsigned long attrs, enum `l4re_dma_space_direction` dir) `L4_NOTHROW`
Unmap the given part of this data space from the DMA address space.

- long [l4re_dma_space_associate](#) ([l4re_dma_space_t](#) dma, [l4_cap_idx_t](#) dma_task, unsigned long attr) [L4_NOTHROW](#)
Associate a (kernel) *DMA space* for a device to this *Dma_space*.
- long [l4re_dma_space_disassociate](#) ([l4re_dma_space_t](#) dma)
Disassociate the (kernel) *DMA space* from this *Dma_space*.

Definition at line 26 of file [dma_space.h](#).

17.259.2.2 l4re_dma_space_space_attrbs

```
enum l4re_dma_space_space_attrbs
```

Attributes assigned to the DMA space when associated with a specific device.

See also

[Space_attrbs](#)

Enumerator

| | |
|---|---|
| L4RE_DMA_SPACE_COHERENT | The device is connected coherently with the cache. This means that the <code>map()</code> and <code>unmap()</code> do not need to sync CPU caches before and after DMA. |
| L4RE_DMA_SPACE_PHYS_SPACE | The DMA space has no DMA task assigned and uses the CPUs physical memory. |

#include <l4/sys/types.h>
Include dependency graph for inhibitor.h:
```

Functions

- long [l4re_inhibitor_acquire](#) ([l4_cap_idx_t](#) cap, [l4_umword_t](#) id, char const *reason)
Acquire an inhibitor lock.
- long [l4re_inhibitor_release](#) ([l4_cap_idx_t](#) cap, [l4_umword_t](#) id)
Release an inhibitor lock.
- long [l4re_inhibitor_next_lock_info](#) ([l4_cap_idx_t](#) cap, char *name, unsigned len, [l4_mword_t](#) current_id)
Get information for the next available inhibitor lock.

17.266.1 Detailed Description

Inhibitor C interface.

Definition in file [inhibitor.h](#).

17.266.2 Function Documentation

17.266.2.1 l4re_inhibitor_acquire()

```
long l4re_inhibitor_acquire (
    l4\_cap\_idx\_t cap,
    l4\_umword\_t id,
    char const * reason )
```

Acquire an inhibitor lock.

Parameters

| | |
|---------------|--|
| <i>cap</i> | Capability for the Inhibitor object (see L4Re::Inhibitor) |
| <i>id</i> | ID of the inhibitor lock that shall be acquired. |
| <i>reason</i> | Reason why the inhibitor lock is acquired. (Used for informing the user or debugging.) |

Returns

0 for success, <0 on error.

See also

[L4Re::Inhibitor::acquire\(\)](#).

17.266.2.2 l4re_inhibitor_next_lock_info()

```
long l4re_inhibitor_next_lock_info (
    l4\_cap\_idx\_t cap,
    char * name,
    unsigned len,
    l4\_mword\_t current_id )
```

Get information for the next available inhibitor lock.

Parameters

| | |
|-------------------------|---|
| <i>cap</i> | Capability to the Inhibitor object (see L4Re::Inhibitor) |
| <i>name</i> | A pointer to a buffer for the name of the lock. |
| <i>len</i> | The length of the available buffer (usually L4Re::Inhibitor::Name_max is used). |
| <i>current↔ _id</i> | The ID of the last available lock, use -1 to get the first lock. |

Return values

| | |
|-------------------|---|
| <i>>0</i> | The ID of the next available lock if there is one (in this case name shall contain the name of the inhibitor lock). |
| <i>-L4_ENODEV</i> | if there are no more locks. |
| <i><0</i> | Any other negative failure value. |

See also

[L4Re::Inhibitor::next_lock_info\(\)](#).

17.266.2.3 l4re_inhibitor_release()

```
long l4re_inhibitor_release (
    l4_cap_idx_t cap,
    l4_umword_t id )
```

Release an inhibitor lock.

Parameters

| | |
|------------|---|
| <i>cap</i> | Capability for the Inhibitor object (see L4Re::Inhibitor). |
| <i>id</i> | ID of inhibitor that shall be released. |

Returns

0 for success, <0 on error.

See also

[L4Re::Inhibitor::release\(\)](#).

#include <l4/sys/types.h>
Include dependency graph for parent.h:
```

Functions

- long [l4re_parent_signal](#) ([l4_cap_idx_t](#) parent, unsigned long sig, unsigned long val)
Send a signal using the parent protocol.

17.274.1 Detailed Description

Parent C interface.

Definition in file [parent.h](#).

17.274.2 Function Documentation

17.274.2.1 l4re_parent_signal()

```
long l4re_parent_signal (
    l4\_cap\_idx\_t parent,
    unsigned long sig,
    unsigned long val )
```

Send a signal using the parent protocol.

Parameters

| | |
|---------------|---|
| <i>parent</i> | Capability index of parent to send signal to. |
| <i>sig</i> | Signal to send |
| <i>val</i> | Value of the signal |

Return values

| | |
|----|-----------|
| 0 | Success |
| <0 | IPC error |

Flags for region operations.

Functions

- int [l4re_rm_reserve_area](#) ([l4_addr_t](#) *start, unsigned long size, [l4re_rm_flags_t](#) flags, unsigned char align) [L4_NOTHROW](#)
Reserve the given area in the region map.
- int [l4re_rm_free_area](#) ([l4_addr_t](#) addr) [L4_NOTHROW](#)
Free an area from the region map.
- int [l4re_rm_attach](#) (void **start, unsigned long size, [l4re_rm_flags_t](#) flags, [l4re_ds_t](#) mem, [l4re_rm_offset_t](#) offs, unsigned char align) [L4_NOTHROW](#)
Attach a data space to a region.
- int [l4re_rm_detach](#) (void *addr) [L4_NOTHROW](#)
Detach and unmap a region from the address space in the current task.
- int [l4re_rm_detach_ds](#) (void *addr, [l4re_ds_t](#) *ds) [L4_NOTHROW](#)
Detach and unmap a region and return affected dataspace in the current task.
- int [l4re_rm_detach_unmap](#) ([l4_addr_t](#) addr, [l4_cap_idx_t](#) task) [L4_NOTHROW](#)
Detach and unmap in specified task.
- int [l4re_rm_detach_ds_unmap](#) (void *addr, [l4re_ds_t](#) *ds, [l4_cap_idx_t](#) task) [L4_NOTHROW](#)
Detach and unmap in specified task.
- int [l4re_rm_find](#) ([l4_addr_t](#) *addr, unsigned long *size, [l4re_rm_offset_t](#) *offset, [l4re_rm_flags_t](#) *flags, [l4re_ds_t](#) *m) [L4_NOTHROW](#)
Find a region given an address and size.
- void [l4re_rm_show_lists](#) (void) [L4_NOTHROW](#)
Dump region map internal data structures.

17.278 l4/re/c/util/cap_alloc.h File Reference

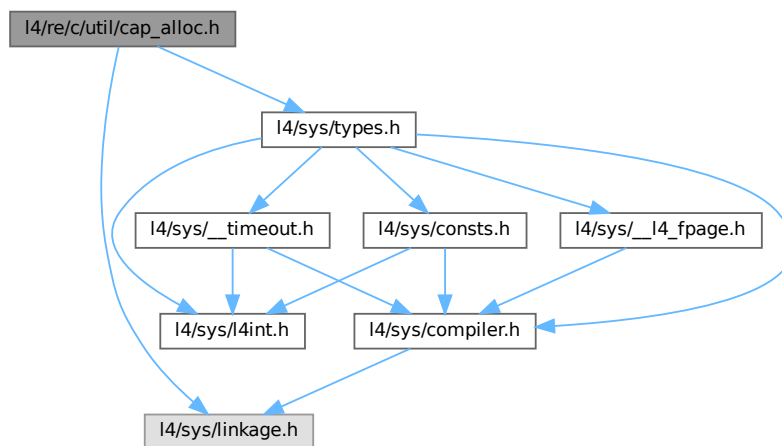

Capability allocator C interface.

```

#include <l4/sys/types.h>
#include <l4/sys/linkage.h>

```

Include dependency graph for cap_alloc.h:

Functions

- `l4_cap_idx_t l4re_util_cap_alloc` (void) L4_NOTHROW
Get free capability index at capability allocator.
- `void l4re_util_cap_free` (l4_cap_idx_t cap) L4_NOTHROW
Return capability index to capability allocator.
- `void l4re_util_cap_free_um` (l4_cap_idx_t cap) L4_NOTHROW
Return capability index to capability allocator, and unmaps the object.
- `long l4re_util_cap_last` (void) L4_NOTHROW
Return last capability index the allocator can return.

17.278.1 Detailed Description

Capability allocator C interface.

17.280 l4/re/c/util/kumem_alloc.h File Reference

Kumem allocator utility C interface.

```
#include <l4/sys/types.h>
```

```
#include <l4/sys/linkage.h>
```

Include dependency graph for kumem_alloc.h:

Functions

- `int l4re_util_kumem_alloc (l4_addr_t *mem, unsigned pages_order, l4_cap_idx_t task, l4_cap_idx_t rm) L4_NOTHROW`

Allocate state area.

17.280.1 Detailed Description

Kumem allocator utility C interface.

Definition in file [kumem_alloc.h](#).

17.280.2 Function Documentation

17.280.2.1 l4re_util_kumem_alloc()

```
int l4re_util_kumem_alloc (
    l4_addr_t * mem,
    unsigned pages_order,
    l4_cap_idx_t task,
    l4_cap_idx_t rm )
```

Allocate state area.

Parameters

| | | |
|-----|--------------------|--|
| out | <i>mem</i> | Pointer to memory that has been allocated. |
| | <i>pages_order</i> | Size to allocate, in log2 pages. |
| | <i>task</i> | Task to use for allocation. |
| | <i>rm</i> | Region manager to use for allocation. |

Return values

| | |
|----|-----------------------|
| 0 | for success |
| <0 | error code on failure |

Note

The amount of kernel-user memory that can be allocated at once is limited by the used kernel implementation. The minimum allocatable amount is one page. A portable implementation should not depend on allocations greater than 16KiB to succeed.

Examples

[examples/sys/aliens/main.c](#), and [examples/sys/utcb-ipc/main.c](#).

Flags of information on a view.

Functions

- int [l4re_video_view_refresh](#) ([l4re_video_view_t](#) *view, int x, int y, int w, int h) [L4_NOTHROW](#)
Flush the given rectangle of pixels of the given view.
- int [l4re_video_view_get_info](#) ([l4re_video_view_t](#) *view, [l4re_video_view_info_t](#) *info) [L4_NOTHROW](#)
Retrieve information about the given view.
- int [l4re_video_view_set_info](#) ([l4re_video_view_t](#) *view, [l4re_video_view_info_t](#) *info) [L4_NOTHROW](#)
Set properties of the view.
- int [l4re_video_view_set_viewport](#) ([l4re_video_view_t](#) *view, int x, int y, int w, int h, unsigned long bofs) [L4_NOTHROW](#)
Set the viewport parameters of a view.
- int [l4re_video_view_stack](#) ([l4re_video_view_t](#) *view, [l4re_video_view_t](#) *pivot, int behind) [L4_NOTHROW](#)
Change the stacking order in the stack of visible views.

17.288.1 Detailed Description

Note

The C interface of L4Re::Video does *NOT* reflect the full C++ interface on purpose. Use the C++ where possible.

Definition in file [view.h](#).

17.297 l4/re/elf_aux.h File Reference

Auxiliary information for binaries.

```
#include <l4/sys/types.h>
```

Include dependency graph for elf_aux.h:

Data Structures

- struct [l4re_elf_aux_t](#)
Generic header for each auxiliary vector element.
- struct [l4re_elf_aux_vma_t](#)
Auxiliary vector element for a reserved virtual memory area.
- struct [l4re_elf_aux_mword_t](#)
Auxiliary vector element for a single unsigned data word.

Macros

- `#define L4RE_ELF_AUX_ELEM const __attribute__((used, section(".rol4re_elf_aux"), aligned(sizeof(l4_umword_t))))`
Define an auxiliary vector element.
- `#define L4RE_ELF_AUX_ELEM_T(type, id, tag, val...) static L4RE_ELF_AUX_ELEM type id = {tag, sizeof(type), val}`
Define an auxiliary vector element.

Typedefs

- typedef struct [l4re_elf_aux_t](#) [l4re_elf_aux_t](#)
Generic header for each auxiliary vector element.
- typedef struct [l4re_elf_aux_vma_t](#) [l4re_elf_aux_vma_t](#)
Auxiliary vector element for a reserved virtual memory area.
- typedef struct [l4re_elf_aux_mword_t](#) [l4re_elf_aux_mword_t](#)
Auxiliary vector element for a single unsigned data word.

Enumerations

Include dependency graph for env.h:

This graph shows which files directly or indirectly include this file:

Data Structures

- struct `I4re_env_cap_entry_t`
*Entry in the **L4Re** environment array for the named initial objects.*
- struct `I4re_env_t`
Initial environment data structure.

Typedefs

- typedef struct `I4re_env_cap_entry_t` `I4re_env_cap_entry_t`
*Entry in the **L4Re** environment array for the named initial objects.*
- typedef struct `I4re_env_t` `I4re_env_t`
Initial environment data structure.

Functions

- [l4re_env_t * l4re_env](#) (void) [L4_NOTHROW](#)
Get L4Re initial environment.
- [l4_kernel_info_t](#) const * [l4re_kip](#) (void) [L4_NOTHROW](#)
Get Kernel Info Page.
- [l4_cap_idx_t](#) [l4re_env_get_cap](#) (char const *name) [L4_NOTHROW](#)
Get the capability selector for the object named name.
- [l4_cap_idx_t](#) [l4re_env_get_cap_e](#) (char const *name, [l4re_env_t](#) const *e) [L4_NOTHROW](#)
Get the capability selector for the object named name.
- [l4re_env_cap_entry_t](#) const * [l4re_env_get_cap_l](#) (char const *name, unsigned l, [l4re_env_t](#) const *e) [L4_NOTHROW](#)
Get the full [l4re_env_cap_entry_t](#) for the object named name.

Shared_cap / Shared_del_cap.

```

#include <l4/re/cap_alloc>
#include <l4/sys/cxx/smart_capability_lx>

```

Include dependency graph for shared_cap:

This graph shows which files directly or indirectly include this file:

Namespaces

- namespace [L4Re](#)
L4Re C++ Interfaces.

Typedefs

- template<typename T>
using [L4Re::Shared_cap](#) = L4::Detail::Shared_cap_impl< T, [Smart_count_cap](#)< [L4_FP_ALL_SPACES](#) > >
Shared capability that implements automatic free and unmap of the capability selector.
- template<typename T>
using [L4Re::shared_cap](#) = L4::Detail::Shared_cap_impl< T, [Smart_count_cap](#)< [L4_FP_ALL_SPACES](#) > >

Shared capability that implements automatic free and unmap of the capability selector.

- `template<typename T >`
`using L4Re::Shared_del_cap = L4::Detail::Shared_cap_impl< T, Smart_count_cap< L4_FP_DELETE_OBJ`
`> >`

Shared capability that implements automatic free and unmap+delete of the capability selector.

- `template<typename T >`
`using L4Re::shared_del_cap = L4::Detail::Shared_cap_impl< T, Smart_count_cap< L4_FP_DELETE_OBJ`
`> >`

Shared capability that implements automatic free and unmap+delete of the capability selector.

Functions

- `template<typename T >`
`Shared_cap< T > L4Re::make_shared_cap (L4Re::Cap_alloc *ca)`
Allocate a capability slot and wrap it in a Shared_cap.
- `template<typename T >`
`Shared_del_cap< T > L4Re::make_shared_del_cap (L4Re::Cap_alloc *ca)`
Allocate a capability slot and wrap it in a Shared_del_cap.

Include dependency graph for ringbuf.h:

```

Data Structures

- struct [l4shmc_ringbuf_head_t](#)
Head field of a ring buffer.
- struct [l4shmc_ringbuf_t](#)
Ring buffer.

Macros

- #define [L4SHMC_RINGBUF_HEAD](#)(ringbuf) ((l4shmc_ringbuf_head_t*)((ringbuf)->_addr))
Get ring buffer head pointer.
- #define [L4SHMC_RINGBUF_DATA](#)(ringbuf) (L4SHMC_RINGBUF_HEAD(ringbuf)->data)
Get ring buffer data pointer.
- #define [L4SHMC_RINGBUF_DATA_SIZE](#)(ringbuf) ((ringbuf)->_size - sizeof(l4shmc_ringbuf_head_t))
Get size of data area.

Functions

- int [l4shmc_rb_init_buffer](#) (l4shmc_ringbuf_t *buf, l4shmc_area_t *area, char const *chunk_name, char const *signal_name, unsigned size)
Initialize a ring buffer by creating an SHMC chunk and the corresponding signals.
- void [l4shmc_rb_deinit_buffer](#) (l4shmc_ringbuf_t *buf)
De-init a ring buffer.
- int [l4shmc_rb_attach_sender](#) (l4shmc_ringbuf_t *buf, char const *signal_name, l4_cap_idx_t owner)
Attach to sender signal of a ring buffer.
- char * [l4shmc_rb_sender_alloc_packet](#) (l4shmc_ringbuf_head_t *head, unsigned psize)
Allocate a packet of a given size within the ring buffer.
- void [l4shmc_rb_sender_put_data](#) (l4shmc_ringbuf_t *buf, char *addr, char *data, unsigned dsize)
Copy data into a previously allocated packet.
- int [l4shmc_rb_sender_next_copy_in](#) (l4shmc_ringbuf_t *buf, char *data, unsigned size, int block_if_necessary)
Copy in packet from an external data source.
- void [l4shmc_rb_sender_commit_packet](#) (l4shmc_ringbuf_t *buf)
Tell the consumer that new data is available.
- int [l4shmc_rb_init_receiver](#) (l4shmc_ringbuf_t *buf, l4shmc_area_t *area, char const *chunk_name, char const *signal_name)
Initialize receive buffer.
- void [l4shmc_rb_attach_receiver](#) (l4shmc_ringbuf_t *buf, l4_cap_idx_t owner)
Attach to receiver signal of a ring buffer.
- int [l4shmc_rb_receiver_wait_for_data](#) (l4shmc_ringbuf_t *buf, int blocking)
Check if (and optionally block until) new data is ready.
- int [l4shmc_rb_receiver_copy_out](#) (l4shmc_ringbuf_head_t *head, char *target, unsigned *tsize)
Copy data out of the buffer.
- void [l4shmc_rb_receiver_notify_done](#) (l4shmc_ringbuf_t *buf)
Notify producer that space is available.
- int [l4shmc_rb_receiver_read_next_size](#) (l4shmc_ringbuf_head_t *head)
Have a look at the ring buffer and see which size the next packet to be read has.

17.396.1 Function Documentation

17.396.1.1 l4shmc_rb_attach_receiver()

```
void l4shmc_rb_attach_receiver (
    l4shmc_ringbuf_t * buf,
    l4_cap_idx_t owner )
```

Attach to receiver signal of a ring buffer.

Attach owner to the receiver-side signal of a ring buffer, which is triggered whenever new data has been produced.

This is split from initialization, because you may not know the owner cap when initializing the buffer.

Parameters

| | |
|--------------|-------------------------------|
| <i>buf</i> | pointer to ring buffer struct |
| <i>owner</i> | owner thread |

17.396.1.2 l4shmc_rb_attach_sender()

```
int l4shmc_rb_attach_sender (
    l4shmc_ringbuf_t * buf,
    char const * signal_name,
    l4_cap_idx_t owner )
```

Attach to sender signal of a ring buffer.

Attach owner to the sender-side signal of a ring buffer, which is triggered whenever new space has been freed in the buffer for the sender to write to.

This is split from initialization, because you may not know the owner cap when initializing the buffer.

Parameters

| | |
|--------------------|-------------------------------|
| <i>buf</i> | pointer to ring buffer struct |
| <i>signal_name</i> | signal base name |
| <i>owner</i> | owner thread |

Returns

0 on success, error otherwise

17.396.1.3 l4shmc_rb_deinit_buffer()

```
void l4shmc_rb_deinit_buffer (
    l4shmc_ringbuf_t * buf )
```

De-init a ring buffer.

Parameters

| | |
|------------|-------------------------------|
| <i>buf</i> | pointer to ring buffer struct |
|------------|-------------------------------|

17.396.1.4 l4shmc_rb_init_buffer()

```
int l4shmc_rb_init_buffer (
    l4shmc_ringbuf_t * buf,
    l4shmc_area_t * area,
    char const * chunk_name,
    char const * signal_name,
    unsigned size )
```

Initialize a ring buffer by creating an SHMC chunk and the corresponding signals.

This needs to be done by one of the participating parties when setting up communication channel.

Precondition

area has been attached using [l4shmc_attach\(\)](#).

Parameters

| | |
|--------------------|--------------------------------------|
| <i>buf</i> | pointer to ring buffer struct |
| <i>area</i> | pointer to SHMC area |
| <i>chunk_name</i> | name of SHMC chunk to create in area |
| <i>signal_name</i> | base name for SHMC signals to create |
| <i>size</i> | chunk size |

Returns

0 on success, error otherwise

17.396.1.5 l4shmc_rb_init_receiver()

```
int l4shmc_rb_init_receiver (
    l4shmc_ringbuf_t * buf,
    l4shmc_area_t * area,
    char const * chunk_name,
    char const * signal_name )
```

Initialize receive buffer.

Initialize the receiver-side of a ring buffer. This requires the underlying SHMC chunk and the corresponding signals to be valid already (read: to be initialized by the sender).

Precondition

chunk & signals have been created and initialized by the sender side

Parameters

| | |
|--------------------|--------------------------------------|
| <i>buf</i> | pointer to ring buffer struct |
| <i>area</i> | pointer to SHMC area |
| <i>chunk_name</i> | name of SHMC chunk to create in area |
| <i>signal_name</i> | base name for SHMC signals to create |

Returns

0 on success, error otherwise

17.396.1.6 l4shmc_rb_receiver_copy_out()

```
int l4shmc_rb_receiver_copy_out (
    l4shmc_ringbuf_head_t * head,
    char * target,
    unsigned * tsize )
```

Copy data out of the buffer.

Parameters

| | | |
|----------------|---------------|--|
| | <i>head</i> | ring buffer head pointer |
| | <i>target</i> | valid target buffer |
| <i>in, out</i> | <i>tsize</i> | size of target buffer (must be \geq packet size!); contains the real data size |

Returns

0 on success, negative error otherwise

17.396.1.7 l4shmc_rb_receiver_notify_done()

```
void l4shmc_rb_receiver_notify_done (
    l4shmc_ringbuf_t * buf )
```

Notify producer that space is available.

Parameters

| | |
|------------|-------------------------------|
| <i>buf</i> | pointer to ring buffer struct |
|------------|-------------------------------|

17.396.1.8 l4shmc_rb_receiver_read_next_size()

```
int l4shmc_rb_receiver_read_next_size (
    l4shmc_ringbuf_head_t * head )
```

Have a look at the ring buffer and see which size the next packet to be read has.

Does not modify anything.

Returns

size of next buffer or -1 if no data available

17.396.1.9 l4shmc_rb_receiver_wait_for_data()

```
int l4shmc_rb_receiver_wait_for_data (
    l4shmc_ringbuf_t * buf,
    int blocking )
```

Check if (and optionally block until) new data is ready.

Parameters

| | |
|-----------------|--|
| <i>buf</i> | pointer to ring buffer struct |
| <i>blocking</i> | block if data is not available immediately |

Returns immediately, if data is available.

Returns

0 success, data available, != 0 otherwise

17.396.1.10 l4shmc_rb_sender_alloc_packet()

```
char * l4shmc_rb_sender_alloc_packet (
    l4shmc_ringbuf_head_t * head,
    unsigned psize )
```

Allocate a packet of a given size within the ring buffer.

This packet may wrap around at the end of the buffer. Users need to be aware of that.

Parameters

| | |
|--------------|--------------------------|
| <i>head</i> | ring buffer head pointer |
| <i>psize</i> | packet size |

Returns

valid address on success

Return values

| | |
|-------------|-------------------------------|
| <i>NULL</i> | if not enough space available |
|-------------|-------------------------------|

17.396.1.11 l4shmc_rb_sender_commit_packet()

```
void l4shmc_rb_sender_commit_packet (
    l4shmc_ringbuf_t * buf )
```

Tell the consumer that new data is available.

Parameters

| | |
|------------|-------------------------------|
| <i>buf</i> | pointer to ring buffer struct |
|------------|-------------------------------|

17.396.1.12 l4shmc_rb_sender_next_copy_in()

```
int l4shmc_rb_sender_next_copy_in (
    l4shmc_ringbuf_t * buf,
    char * data,
    unsigned size,
    int block_if_necessary )
```

Copy in packet from an external data source.

This is the function you'll want to use. Just pass it a buffer pointer and let the lib do the work.

Parameters

| | |
|---------------------------|--------------------------------------|
| <i>buf</i> | pointer to ring buffer struct |
| <i>data</i> | valid buffer |
| <i>size</i> | data size |
| <i>block_if_necessary</i> | bool: block if buffer currently full |

Return values

| | |
|------------|--|
| 0 | on success |
| -L4_ENOMEM | if block == false and no space available |

17.396.1.13 l4shmc_rb_sender_put_data()

```
void l4shmc_rb_sender_put_data (
    l4shmc_ringbuf_t * buf,
    char * addr,
    char * data,
    unsigned dsize )
```

Copy data into a previously allocated packet.

This function is wrap-around aware.

Parameters

| | |
|------------|-------------------------------|
| <i>buf</i> | pointer to ring buffer struct |
|------------|-------------------------------|

Parameters

| | |
|--------------|--|
| <i>addr</i> | valid destination (allocate with <code>alloc_packet()</code>) |
| <i>data</i> | data source |
| <i>dsize</i> | data size |

17.398 l4/shmc/shmc.h File Reference

Shared memory library header file.

```
#include <l4/sys/linkage.h>
#include <l4/sys/types.h>
#include <l4/sys/err.h>
#include <l4/shmc/types.h>
#include <l4/shmc/internal.h>
```

Include dependency graph for shmc.h:

This graph shows which files directly or indirectly include this file:

Functions

- long [l4shmc_create](#) (char const *shmc_name)
Create a shared memory area.
- long [l4shmc_attach](#) (char const *shmc_name, l4shmc_area_t *shmarea)
Attach to a shared memory area.
- long [l4shmc_get_client_nr](#) (l4shmc_area_t const *shmarea)
Determine the client number of the shared memory region.
- long [l4shmc_mark_client_initialized](#) (l4shmc_area_t *shmarea)
Mark this shared memory client as 'initialized'.
- long [l4shmc_get_initialized_clients](#) (l4shmc_area_t *shmarea, l4_umword_t *bitmask)
Fetch the `_clients_init_done` bitmask of the shared memory area.

- long [l4shmc_add_chunk](#) (l4shmc_area_t *shmarea, char const *chunk_name, [l4_umword_t](#) chunk_capacity, l4shmc_chunk_t *chunk)
Add a chunk in the shared memory area.
- long [l4shmc_add_signal](#) (l4shmc_area_t *shmarea, char const *signal_name, l4shmc_signal_t *signal)
Add a signal for the shared memory area.
- long [l4shmc_trigger](#) (l4shmc_signal_t *signal)
Trigger a signal.
- long [l4shmc_chunk_try_to_take](#) (l4shmc_chunk_t *chunk)
Try to mark chunk busy.
- long [l4shmc_chunk_try_to_take_for_writing](#) (l4shmc_chunk_t *chunk)
Try to mark chunk busy writing.
- long [l4shmc_chunk_try_to_take_for_overwriting](#) (l4shmc_chunk_t *chunk)
Try to mark the chunk busy writing after it was ready for reading.
- long [l4shmc_chunk_try_to_take_for_reading](#) (l4shmc_chunk_t *chunk)
Try to mark chunk busy reading.
- long [l4shmc_chunk_ready](#) (l4shmc_chunk_t *chunk, [l4_umword_t](#) size)
Mark chunk as filled (ready).
- long [l4shmc_chunk_ready_sig](#) (l4shmc_chunk_t *chunk, [l4_umword_t](#) size)
Mark chunk as filled (ready) and signal consumer.
- long [l4shmc_get_chunk](#) (l4shmc_area_t *shmarea, char const *chunk_name, l4shmc_chunk_t *chunk)
Get chunk out of shared memory area.
- long [l4shmc_get_chunk_to](#) (l4shmc_area_t *shmarea, char const *chunk_name, [l4_umword_t](#) timeout_ms, l4shmc_chunk_t *chunk)
Get chunk out of shared memory area, with timeout.
- long [l4shmc_iterate_chunk](#) (l4shmc_area_t const *shmarea, char const **chunk_name, long offs)
Iterate over names of all existing chunks.
- long [l4shmc_attach_signal](#) (l4shmc_area_t *shmarea, char const *signal_name, [l4_cap_idx_t](#) thread, l4shmc_signal_t *signal)
Attach to signal.
- long [l4shmc_get_signal](#) (l4shmc_area_t *shmarea, char const *signal_name, l4shmc_signal_t *signal)
Get signal object from the shared memory area.
- long [l4shmc_enable_signal](#) (l4shmc_signal_t *signal)
Enable a signal.
- long [l4shmc_enable_chunk](#) (l4shmc_chunk_t *chunk)
Enable a signal connected with a chunk.
- long [l4shmc_wait_any](#) (l4shmc_signal_t **retsignal)
Wait on any signal.
- long [l4shmc_wait_any_try](#) (l4shmc_signal_t **retsignal)
Check whether any waited signal has an event pending.
- long [l4shmc_wait_any_to](#) ([l4_timeout_t](#) timeout, l4shmc_signal_t **retsignal)
Wait for any signal with timeout.
- long [l4shmc_wait_signal](#) (l4shmc_signal_t *signal)
Wait on a specific signal.
- long [l4shmc_wait_signal_to](#) (l4shmc_signal_t *signal, [l4_timeout_t](#) timeout)
Wait on a specific signal, with timeout.
- long [l4shmc_wait_signal_try](#) (l4shmc_signal_t *signal)
Check whether a specific signal has an event pending.
- long [l4shmc_wait_chunk](#) (l4shmc_chunk_t *chunk)
Wait on a specific chunk.
- long [l4shmc_wait_chunk_to](#) (l4shmc_chunk_t *chunk, [l4_timeout_t](#) timeout)
Check whether a specific chunk has an event pending, with timeout.

- long [l4shmc_wait_chunk_try](#) (l4shmc_chunk_t *chunk)
Check whether a specific chunk has an event pending.
- long [l4shmc_chunk_consumed](#) (l4shmc_chunk_t *chunk)
Mark a chunk as free.
- long [l4shmc_connect_chunk_signal](#) (l4shmc_chunk_t *chunk, l4shmc_signal_t *signal)
Connect a signal with a chunk.
- long [l4shmc_is_chunk_ready](#) (l4shmc_chunk_t const *chunk)
Check whether data is available.
- long [l4shmc_is_chunk_clear](#) (l4shmc_chunk_t const *chunk)
Check whether chunk is free.
- void * [l4shmc_chunk_ptr](#) (l4shmc_chunk_t const *chunk)
Get data pointer to chunk.
- long [l4shmc_chunk_size](#) (l4shmc_chunk_t const *chunk)
Get current size of a chunk.
- long [l4shmc_chunk_capacity](#) (l4shmc_chunk_t const *chunk)
Get capacity of a chunk.
- l4shmc_signal_t * [l4shmc_chunk_signal](#) (l4shmc_chunk_t const *chunk)
Get the registered signal of a chunk.
- [l4_cap_idx_t](#) [l4shmc_signal_cap](#) (l4shmc_signal_t const *signal)
Get the signal capability of a signal.
- long [l4shmc_check_magic](#) (l4shmc_chunk_t const *chunk)
Check magic value of a chunk.
- long [l4shmc_area_size](#) (l4shmc_area_t const *shmarea)
Get size of shared memory area.
- long [l4shmc_area_size_free](#) (l4shmc_area_t const *shmarea)
Get free size of shared memory area.
- long [l4shmc_area_overhead](#) (void)
Get memory overhead per area that is not available for chunks.
- long [l4shmc_chunk_overhead](#) (void)
Get memory overhead required in addition to the chunk capacity for adding one chunk.

17.398.1 Detailed Description

Shared memory library header file.

Definition in file [shmc.h](#).

17.400 l4/sigma0/sigma0.h File Reference

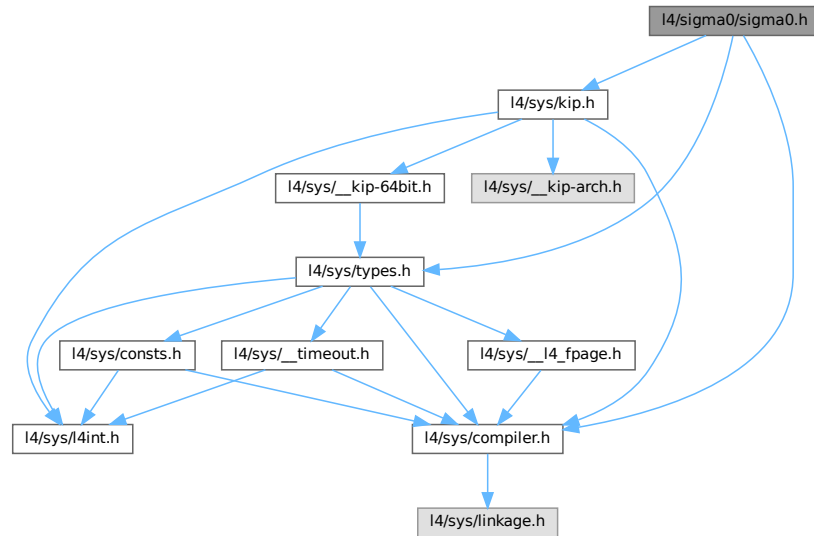

Sigma0 interface.

```

#include <l4/sys/compiler.h>
#include <l4/sys/types.h>
#include <l4/sys/kip.h>

```

Include dependency graph for sigma0.h:

Macros

- **#define SIGMA0_REQ_MAGIC** ~0xFFUL
Request magic.
- **#define SIGMA0_REQ_MASK** ~0xFFUL
Request mask.
- **#define SIGMA0_REQ_ID_MASK** 0xF0
ID mask.
- **#define SIGMA0_REQ_ID_FPAGE_RAM** 0x60
RAM.
- **#define SIGMA0_REQ_ID_FPAGE_IOMEM** 0x70
I/O memory.
- **#define SIGMA0_REQ_ID_FPAGE_IOMEM_CACHED** 0x80
Cached I/O memory.
- **#define SIGMA0_REQ_ID_FPAGE_ANY** 0x90
Any.
- **#define SIGMA0_REQ_ID_KIP** 0xA0
KIP.
- **#define SIGMA0_REQ_ID_DEBUG_DUMP** 0xC0
Debug dump.
- **#define SIGMA0_IS_MAGIC_REQ(d1)** ((d1 & SIGMA0_REQ_MASK) == SIGMA0_REQ_MAGIC)
Check if magic.
- **#define SIGMA0_REQ(x)** (SIGMA0_REQ_MAGIC + SIGMA0_REQ_ID_ ## x)
Construct.
- **#define SIGMA0_REQ_FPAGE_RAM** (SIGMA0_REQ(FPAGE_RAM))
RAM.
- **#define SIGMA0_REQ_FPAGE_IOMEM** (SIGMA0_REQ(FPAGE_IOMEM))
I/O memory.
- **#define SIGMA0_REQ_FPAGE_IOMEM_CACHED** (SIGMA0_REQ(FPAGE_IOMEM_CACHED))

Cache I/O memory.

- #define **SIGMA0_REQ_FPAGE_ANY** ([SIGMA0_REQ\(FPAGE_ANY\)](#))

Any.

- #define **SIGMA0_REQ_KIP** ([SIGMA0_REQ\(KIP\)](#))

KIP.

- #define **SIGMA0_REQ_DEBUG_DUMP** ([SIGMA0_REQ\(DEBUG_DUMP\)](#))

Debug dump.

Enumerations

- enum [l4sigma0_return_flags_t](#) {
[L4SIGMA0_OK](#) , [L4SIGMA0_NOTALIGNED](#) , [L4SIGMA0_IPCERROR](#) , [L4SIGMA0_NOFPAGE](#) ,
[L4SIGMA0_4](#) , [L4SIGMA0_5](#) , [L4SIGMA0_SMALLERFPAGE](#) }

Return flags of libsigma0 functions.

Functions

- [l4_kernel_info_t](#) * [l4sigma0_map_kip](#) ([l4_cap_idx_t](#) sigma0, void *addr, unsigned log2_size)
Map the kernel info page from sigma0 to addr.
- int [l4sigma0_map_mem](#) ([l4_cap_idx_t](#) sigma0, [l4_addr_t](#) phys, [l4_addr_t](#) virt, [l4_addr_t](#) size)
Request a memory mapping from sigma0.
- int [l4sigma0_map_iomem](#) ([l4_cap_idx_t](#) sigma0, [l4_addr_t](#) phys, [l4_addr_t](#) virt, [l4_addr_t](#) size, int cached)
Request IO memory from sigma0.
- int [l4sigma0_map_anypage](#) ([l4_cap_idx_t](#) sigma0, [l4_addr_t](#) map_area, unsigned log2_map_size, [l4_addr_t](#) *base, unsigned sz)
Request an arbitrary free page of RAM.
- void [l4sigma0_debug_dump](#) ([l4_cap_idx_t](#) sigma0)
Request sigma0 to dump internal debug information.
- char const * [l4sigma0_map_errstr](#) (int err)
Get user readable error messages for the return codes.

17.400.1 Detailed Description

Sigma0 interface.

17.405 l4/sys/___ktrace-impl.h File Reference

L4 kernel event tracing.

```
#include <l4/sys/types.h>
```

```
#include <l4/sys/kdebug.h>
```

Include dependency graph for ___ktrace-impl.h:

This graph shows which files directly or indirectly include this file:

Functions

- [l4_umword_t fiasco_tbuf_log](#) (const char *text)
Create new trace-buffer entry with describing <text>.
- [l4_umword_t fiasco_tbuf_log_3val](#) (const char *text, [l4_umword_t](#) v1, [l4_umword_t](#) v2, [l4_umword_t](#) v3)
Create new trace-buffer entry with describing <text> and three additional values.
- void **fiasco_tbuf_clear** (void)
Clear trace-buffer.
- void **fiasco_tbuf_dump** (void)
Dump trace-buffer to kernel console.
- [l4_umword_t fiasco_tbuf_log_binary](#) (const unsigned char *data)
Create new trace-buffer entry with binary data.

17.405.1 Detailed Description

[L4](#) kernel event tracing.

Include dependency graph for ___typeinfo.h:

This graph shows which files directly or indirectly include this file:

Data Structures

- struct [L4::Typeid::P_dispatch< LIST >](#)
Use for protocol based dispatch stage.
- struct [L4::Typeid::Detail::Rpc_end](#)
Internal end-of-list marker.
- struct [L4::Typeid::Detail::_Rpc< OPCODE, O, X >](#)
Empty list of RPCs.
- struct [L4::Typeid::Detail::_Rpc< OPCODE, O, R, X... >](#)
Non-empty list of RPCs.
- struct [L4::Typeid::Detail::_Rpc< OPCODE, O, R, X... >::Rpc< Y >](#)
Find the given RPC in the list.
- struct [L4::Typeid::Detail::_Rpc< OPCODE, O, Default_op< R > >::Rpc< Y >](#)
Find the given RPC in the list.
- struct [L4::Typeid::Raw_ipc< CLASS >](#)

- RPCs list for passing raw incoming IPC to the server object.*
- struct [L4::Typeid::Rpc< RPCS >](#)
 - Standard list of RPCs of an interface.*
- struct [L4::Typeid::Rpc_code< OPCODE_TYPE >](#)
 - List of RPCs of an interface using a special opcode type.*
- struct [L4::Typeid::Rpc_code< OPCODE_TYPE >::F< RPCS >](#)
- struct [L4::Typeid::Rpc_nocode< OPERATION >](#)
 - List of RPCs of an interface using a single operation without an opcode.*
- struct [L4::Typeid::Rpc_sys< ARG >](#)
 - List of RPCs typically used for kernel interfaces.*
- struct [L4::Type_info](#)
 - Dynamic Type Information for [L4Re](#) Interfaces.*
- class [L4::Type_info::Demand](#)
 - Data type for expressing the needed receive buffers at the server-side of an interface.*
- struct [L4::Type_info::Demand_t< CAPS, FLAGS, MEM, PORTS >](#)
 - Template type statically describing demand of receive buffers.*
- struct [L4::Type_info::Demand_union_t< D1, D2 >](#)
 - Template type statically describing the combination of two [Demand](#) object.*
- struct [L4::Kobject_typeid< T >](#)
 - [Meta](#) object for handling access to type information of [Kobjects](#).*
- struct [L4::Kobject_typeid< void >](#)
 - Minimalistic ID for `void` interface.*
- class [L4::Kobject_t< Derived, Base, PROTO, S_DEMAND >](#)
 - Helper class to create an [L4Re](#) interface class that is derived from a single base class.*
- class [L4::Kobject_2t< Derived, Base1, Base2, PROTO, S_DEMAND >](#)
 - Helper class to create an [L4Re](#) interface class that is derived from two base classes (see [L4::Kobject_t](#)).*
- struct [L4::Kobject_3t< Derived, Base1, Base2, Base3, PROTO, S_DEMAND >](#)
 - Helper class to create an [L4Re](#) interface class that is derived from three base classes (see [L4::Kobject_t](#)).*
- struct [L4::Proto_t< P >](#)
 - Data type for defining protocol numbers.*

Namespaces

- namespace [L4](#)
 - [L4](#) low-level kernel interface.*
- namespace [L4::Typeid](#)
 - Definition of interface data-type helpers.*

Typedefs

- typedef int [L4::Opcode](#)
 - Data type for RPC opcodes.*

Enumerations

- enum { [L4::PROTO_ANY](#) = 0 , [L4::PROTO_EMPTY](#) = -19 }

Functions

- `template<typename T>`
`Type_info` const * `L4::kobject_typeid` () noexcept
Get the `L4::Type_info` for the `L4Re` interface given in `T`.

17.411.1 Detailed Description

Type information handling.

Definition in file `__typeinfo.h`.

17.412 __typeinfo.h

17.420.2 Function Documentation

17.420.2.1 l4_arm_smccc_call()

```
l4_msgtag_t l4_arm_smccc_call (
    l4_cap_idx_t pfc,
    l4_umword_t func,
    l4_umword_t in0,
    l4_umword_t in1,
    l4_umword_t in2,
    l4_umword_t in3,
    l4_umword_t in4,
    l4_umword_t in5,
    l4_umword_t * out0,
    l4_umword_t * out1,
    l4_umword_t * out2,
    l4_umword_t * out3,
    l4_umword_t client_id ) [inline]
```

C interface for calling the ARM secure monitor, see [L4::Arm_smccc::call\(\)](#) for the C++ interface.

Parameters

| | |
|------------|--------------------------------------|
| <i>pfc</i> | Capability of the SMC kernel object. |
|------------|--------------------------------------|

The input parameters consist of a function identifier, 6 arguments and a client id. Results are returned in 4 output parameters.

Parameters

| | | |
|-----|------------------|--|
| | <i>func</i> | Function identifier. <ul style="list-style-type: none"> • Bit 31 has to be set: This marks the call as <i>Fast Call</i>. <i>Yielding Calls</i> (bit 31 unset) are rejected by the kernel. • Bit 30 defines the calling convention: • Bit 30 == 1: 64-bit calling convention. • Bit 30 == 0: 32-bit calling convention. • Bits 24..29 determine the service call ID. The permitted IDs are set in the kernel configuration. By default only service IDs $\geq 0x30000000$ (<i>Trusted Application Calls</i> and <i>Trusted OS Calls</i>) are allowed. |
| in | <i>in0</i> | First input parameter. |
| in | <i>in1</i> | Second input parameter. |
| in | <i>in2</i> | Third input parameter. |
| in | <i>in3</i> | Fourth input parameter. |
| in | <i>in4</i> | Fifth input parameter. |
| in | <i>in5</i> | Sixth input parameter. |
| out | <i>out0</i> | First output parameter. |
| out | <i>out1</i> | Second output parameter. |
| out | <i>out2</i> | Third output parameter. |
| out | <i>out3</i> | Fourth output parameter. |
| in | <i>client_id</i> | Client ID. According to the specification, this value might be ignored by certain functions. |

Return values

| | |
|------------|---|
| -L4_ENOSYS | Either bit 31 of the function call not set or service ID outside the range permitted by kernel configuration. |
| -L4_EINVAL | Invalid number of parameters. |
| <0 | Other L4 error. |
| 0 | Success. |

17.422 amd64/l4/sys/cache.h File Reference

Cache functions.

Functions

- `int l4_cache_clean_data` (unsigned long start, unsigned long end) `L4_NOTHROW`
Cache clean a range in D-cache; writes back to PoC.
- `int l4_cache_flush_data` (unsigned long start, unsigned long end) `L4_NOTHROW`
Cache flush a range; writes back to PoC.
- `int l4_cache_inv_data` (unsigned long start, unsigned long end) `L4_NOTHROW`
Cache invalidate a range; might write back to PoC.
- `int l4_cache_coherent` (unsigned long start, unsigned long end) `L4_NOTHROW`
Make memory coherent between I-cache and D-cache; writes back to PoU.
- `int l4_cache_dma_coherent` (unsigned long start, unsigned long end) `L4_NOTHROW`
Make memory coherent for use with external memory; writes back to PoC.
- `int l4_cache_dma_coherent_full` (void) `L4_NOTHROW`
Make memory coherent for use with external memory; writes back to PoC.

Author

Alexander Warg alexander.warg@os.inf.tu-dresden.de

Definition in file [capability](#).

17.432.2 Macro Definition Documentation

17.432.2.1 L4_DISABLE_COPY

```
#define L4_DISABLE_COPY(  
    _class )
```

Value:

```
public:
    _class(_class const &) = delete; \
    _class operator = (_class const &) = delete; \
private:
```

Disable copy of a class.

Parameters

| | |
|---------------------|---|
| <code>_class</code> | Name of the class that shall not have value copy semantics. |
|---------------------|---|

The typical use of this is:

```
class Non_value
{
    L4_DISABLE_COPY(Non_value)

    ...
}
```

Constants.

```
#include <l4/sys/consts.h>
```

Include dependency graph for consts.h:

This graph shows which files directly or indirectly include this file:

Enumerations

- enum
Defaults for local thread priorities.

17.442.1 Detailed Description

Constants.

Definition in file [consts.h](#).

17.442.2 Enumeration Type Documentation

17.442.2.1 anonymous enum

anonymous enum

Defaults for local thread priorities.

Priorities are to be seen as local. These are used by the loader and libpthread. They are to be understood as 'local', which means the actual priority of the thread (as seen by the kernel) is the base priority as defined by the scheduler plus the local priority.

Definition at line 28 of file [consts.h](#).

17.444 l4/sys/consts.h File Reference

Common constants.

```
#include <l4/sys/compiler.h>
```

```
#include <l4/sys/l4int.h>
```

Include dependency graph for consts.h:

This graph shows which files directly or indirectly include this file:

Macros

- **#define L4_PAGESIZE**
Minimal page size (in bytes).
- **#define L4_PAGEMASK**
Mask for the page number.
- **#define L4_LOG2_PAGESIZE**
Number of bits used for page offset.
- **#define L4_SUPERPAGE_SIZE**
Size of a large page.
- **#define L4_SUPERPAGEMASK**
Mask for the number of a large page.
- **#define L4_LOG2_SUPERPAGE_SIZE**
Number of bits used as offset for a large page.
- **#define L4_INVALID_PTR** `((void *)L4_INVALID_ADDR)`
Invalid address as pointer type.

Enumerations

- enum [l4_syscall_flags_t](#) {
[L4_SYSF_NONE](#) , [L4_SYSF_SEND](#) , [L4_SYSF_RECV](#) , [L4_SYSF_OPEN_WAIT](#) ,
[L4_SYSF_REPLY](#) , [L4_SYSF_CALL](#) , [L4_SYSF_WAIT](#) , [L4_SYSF_SEND_AND_WAIT](#) ,
[L4_SYSF_REPLY_AND_WAIT](#) }
Capability selector flags.
- enum [l4_cap_consts_t](#) {
[L4_CAP_SHIFT](#) , [L4_CAP_SIZE](#) = 1UL << [L4_CAP_SHIFT](#) , [L4_CAP_OFFSET](#) , [L4_CAP_MASK](#) ,
[L4_INVALID_CAP](#) , [L4_INVALID_CAP_BIT](#) = 1UL << ([L4_CAP_SHIFT](#) - 1) }
Constants related to capability selectors.
- enum [l4_unmap_flags_t](#) { [L4_FP_ALL_SPACES](#) , [L4_FP_DELETE_OBJ](#) , [L4_FP_OTHER_SPACES](#) }
Flags for the unmap operation.
- enum [l4_msg_item_consts_t](#) {
[L4_ITEM_MAP](#) = 8 , [L4_ITEM_CONT](#) = 1 , [L4_MAP_ITEM_GRANT](#) = 2 , [L4_MAP_ITEM_MAP](#) = 0 ,
[L4_RCV_ITEM_FORWARD_MAPPINGS](#) = 1 , [L4_RCV_ITEM_SINGLE_CAP](#) = [L4_ITEM_MAP](#) | 2 ,
[L4_RCV_ITEM_LOCAL_ID](#) = 4 }
Constants for message items.
- enum [l4_buffer_desc_consts_t](#) { [L4_BDR_MEM_SHIFT](#) = 0 , [L4_BDR_IO_SHIFT](#) = 5 , [L4_BDR_OBJ_SHIFT](#)
= 10 , [L4_BDR_OFFSET_MASK](#) = (1UL << 20) - 1 }
Constants for buffer descriptors.
- enum [l4_default_caps_t](#) {
[L4_BASE_TASK_CAP](#) , [L4_BASE_FACTORY_CAP](#) , [L4_BASE_THREAD_CAP](#) , [L4_BASE_PAGER_CAP](#) ,
[L4_BASE_LOG_CAP](#) , [L4_BASE_ICU_CAP](#) , [L4_BASE_SCHEDULER_CAP](#) , [L4_BASE_IOMMU_CAP](#) ,
[L4_BASE_DEBUGGER_CAP](#) , [L4_BASE_ARM_SMCCC_CAP](#) , [L4_BASE_CAPS_LAST_P1](#) , [L4_BASE_CAPS_LAST](#)
= [L4_BASE_CAPS_LAST_P1](#) - 1 }
Default capabilities setup for the initial tasks.
- enum [l4_addr_consts_t](#) { [L4_INVALID_ADDR](#) = ~0UL }
Address related constants.

Functions

- [l4_addr_t l4_trunc_page](#) ([l4_addr_t](#) address) [L4_NOTHROW](#)
Round an address down to the next lower page boundary.
- [l4_addr_t l4_trunc_size](#) ([l4_addr_t](#) address, unsigned char bits) [L4_NOTHROW](#)
Round an address down to the next lower flexpage with size bits.
- [l4_addr_t l4_round_page](#) ([l4_addr_t](#) address) [L4_NOTHROW](#)
Round address up to the next page.
- [l4_addr_t l4_round_size](#) ([l4_addr_t](#) value, unsigned char bits) [L4_NOTHROW](#)
Round value up to the next alignment with bits size.
- unsigned [l4_bytes_to_mwords](#) (unsigned size) [L4_NOTHROW](#)
Determine how many machine words ([l4_umword_t](#)) are required to store a buffer of 'size' bytes.

```

Include dependency graph for ipc_client:

This graph shows which files directly or indirectly include this file:

Namespaces

- namespace [L4](#)
L4 low-level kernel interface.
- namespace [L4::lpc](#)
IPC related functionality.
- namespace [L4::lpc::Msg](#)
IPC Message related functionality.

Macros

- `#define` [L4_RPC_DEF\(name\)](#)
Generate the definition of an RPC stub.

17.454.1 Macro Definition Documentation

17.454.1.1 L4_RPC_DEF

```
#define L4_RPC_DEF(  
    name )
```

Value:

```
template struct L4::lpc::Msg::Rpc_call \  
    <name##_t, name##_t::class_type, name##_t::ipc_type, name##_t::flags_type>
```

Generate the definition of an RPC stub.

Parameters

| | |
|-------------|--|
| <i>name</i> | The fully qualified method name to be implemented, this means <code>class::method</code> . |
|-------------|--|

This macro generates the definition (implementation) for the given RPC interface method.

Definition at line 32 of file [ipc_client](#).

Include dependency graph for ipc_iface:

This graph shows which files directly or indirectly include this file:

Data Structures

- struct [L4::lpc::Call](#)
RPC attribute for a standard RPC call.
- struct [L4::lpc::Call_zero_send_timeout](#)
RPC attribute for an RPC call, with zero send timeout.
- struct [L4::lpc::Call_t< RIGHTS >](#)
RPC attribute for an RPC call with required rights.
- struct [L4::lpc::Send_only](#)
RPC attribute for a send-only RPC.

Namespaces

- namespace [L4](#)
L4 low-level kernel interface.
- namespace [L4::lpc](#)
IPC related functionality.
- namespace [L4::lpc::Msg](#)
IPC Message related functionality.

Macros

- `#define L4_INLINE_RPC_NF(res, name, args...)`
Define an inline RPC call type (the type only, no callable).
- `#define L4_INLINE_RPC_NF_OP(op, res, name, args...)`
Define an inline RPC call type with specific opcode (the type only, no callable).
- `#define L4_INLINE_RPC(res, name, args, attr...) res name args`
Define an inline RPC call (type and callable).
- `#define L4_INLINE_RPC_OP(op, res, name, args, attr...) res name args`
Define an inline RPC call with specific opcode (type and callable).
- `#define L4_RPC_NF(res, name, args...)`
Define an RPC call type (the type only, no callable).
- `#define L4_RPC_NF_OP(op, res, name, args...)`
Define an RPC call type with specific opcode (the type only, no callable).
- `#define L4_RPC(res, name, args, attr...) res name args`
Define an RPC call (type and callable).
- `#define L4_RPC_OP(op, res, name, args, attr...) res name args`
Define an RPC call with specific opcode (type and callable).

17.457.2 Macro Definition Documentation

17.457.2.1 L4_INLINE_RPC

```
#define L4_INLINE_RPC(  
    res,  
    name,  
    args,  
    attr... ) res name args
```

Define an inline RPC call (type and callable).

Parameters

| | |
|-------------|--|
| <i>res</i> | The result type of the RPC call |
| <i>name</i> | The name of the function (<code>name_t</code> is used for the type.) |
| <i>args</i> | The argument list of the RPC function. |
| <i>attr</i> | Optional RPC attributes (L4::ipc::Call , L4::ipc::Call_t etc.). |

Examples

[examples/clntsrv/src/shared.h](#).

Definition at line [476](#) of file [ipc_iface](#).

17.457.2.2 L4_INLINE_RPC_NF

```
#define L4_INLINE_RPC_NF(  
    res,  
    name,  
    args... )
```

Value:

```
struct name##_t : L4::IpC::Msg::Rpc_inline_call<name##_t, Class, res args> \  
{  
    typedef L4::IpC::Msg::Rpc_inline_call<name##_t, Class, res args> type; \  
    L4_INLINE_RPC_SRV_FORWARD(name); \  
}
```

Define an inline RPC call type (the type only, no callable).

Parameters

| | |
|-------------|--|
| <i>res</i> | The result type of the RPC call |
| <i>name</i> | The name of the function (<i>name_t</i> is used for the type.) |
| <i>args</i> | The argument list of the RPC function, and RPC attributes (L4::ipc::Call , L4::ipc::Call_t etc.). |

Stubs generated by this macro can be used explicitly in custom wrapper methods that need to use the underlying RPC code and provide some higher level abstraction, for example with default arguments or extra argument conversion.

Definition at line 447 of file [ipc_iface](#).

17.457.2.3 L4_INLINE_RPC_NF_OP

```
#define L4_INLINE_RPC_NF_OP (
    op,
    res,
    name,
    args... )
```

Value:

```
struct name##_t : L4::Ipcc::Msg::Rpc_inline_call<name##_t, Class, res args> {
{
    typedef L4::Ipcc::Msg::Rpc_inline_call<name##_t, Class, res args> type;
    enum { Opcode = (op) };
    L4_INLINE_RPC_SRV_FORWARD(name);
}
```

Define an inline RPC call type with specific opcode (the type only, no callable).

Parameters

| | |
|-------------|--|
| <i>op</i> | The opcode number for this function |
| <i>res</i> | The result type of the RPC call |
| <i>name</i> | The name of the function (<i>name_t</i> is used for the type.) |
| <i>args</i> | The argument list of the RPC function, and RPC attributes (L4::ipc::Call , L4::ipc::Call_t etc.). |

Stubs generated by this macro can be used explicitly in custom wrapper methods that need to use the underlying RPC code and provide some higher level abstraction, for example with default arguments or extra argument conversion.

Definition at line 460 of file [ipc_iface](#).

17.457.2.4 L4_INLINE_RPC_OP

```
#define L4_INLINE_RPC_OP (
    op,
    res,
    name,
    args,
    attr... ) res name args
```

Define an inline RPC call with specific opcode (type and callable).

Parameters

| | |
|-------------|--|
| <i>op</i> | The opcode number for this function |
| <i>res</i> | The result type of the RPC call |
| <i>name</i> | The name of the function (<i>name_t</i> is used for the type.) |
| <i>args</i> | The argument list of the RPC function. |
| <i>attr</i> | Optional RPC attributes (L4::ipc::Call , L4::ipc::Call_t etc.). |

Definition at line 491 of file [ipc_iface](#).

17.457.2.5 L4_RPC

```
#define L4_RPC(
    res,
    name,
    args,
    attr... ) res name args
```

Define an RPC call (type and callable).

Parameters

| | |
|-------------|--|
| <i>res</i> | The result type of the RPC call |
| <i>name</i> | The name of the function (<i>name_t</i> is used for the type.) |
| <i>args</i> | The argument list of the RPC function. |
| <i>attr</i> | Optional RPC attributes (L4::ipc::Call , L4::ipc::Call_t etc.). |

Definition at line 535 of file [ipc_iface](#).

17.457.2.6 L4_RPC_NF

```
#define L4_RPC_NF(
    res,
    name,
    args... )
```

Value:

```
struct name##_t : L4::Ip::Msg::Rpc_call<name##_t, Class, res args>
{
    typedef L4::Ip::Msg::Rpc_call<name##_t, Class, res args> type;
    L4_INLINE_RPC_SRV_FORWARD(name);
}
```

Define an RPC call type (the type only, no callable).

Parameters

| | |
|-------------|--|
| <i>res</i> | The result type of the RPC call |
| <i>name</i> | The name of the function (<i>name_t</i> is used for the type.) |
| <i>args</i> | The argument list of the RPC function, and RPC attributes (L4::ipc::Call , L4::ipc::Call_t etc.). |

Definition at line 504 of file [ipc_iface](#).

17.457.2.7 L4_RPC_NF_OP

```
#define L4_RPC_NF_OP (
    op,
    res,
    name,
    args... )
```

Value:

```
struct name##_t : L4::Ipc::Msg::Rpc_call<name##_t, Class, res args>
{
    typedef L4::Ipc::Msg::Rpc_call<name##_t, Class, res args> type;
    enum { Opcode = (op) };
    L4_INLINE_RPC_SRV_FORWARD(name);
}
```

Define an RPC call type with specific opcode (the type only, no callable).

Parameters

| | |
|-------------|--|
| <i>op</i> | The opcode number for this function |
| <i>res</i> | The result type of the RPC call |
| <i>name</i> | The name of the function (<i>name_t</i> is used for the type.) |
| <i>args</i> | The argument list of the RPC function, and RPC attributes (L4::Ipc::Call , L4::Ipc::Call_t etc.). |

Definition at line 519 of file [ipc_iface](#).

17.457.2.8 L4_RPC_OP

```
#define L4_RPC_OP (
    op,
    res,
    name,
    args,
    attr... ) res name args
```

Define an RPC call with specific opcode (type and callable).

Parameters

| | |
|-------------|--|
| <i>op</i> | The opcode number for this function |
| <i>res</i> | The result type of the RPC call |
| <i>name</i> | The name of the function (<i>name_t</i> is used for the type.) |
| <i>args</i> | The argument list of the RPC function. |
| <i>attr</i> | Optional RPC attributes (L4::Ipc::Call , L4::Ipc::Call_t etc.). |

#include <l4/cxx/type_traits>
#include <l4/cxx/exceptions>
Include dependency graph for ipc_server:
```

Data Structures

- class `L4::Server_object`
Abstract server object to be used with `L4::Server` and `L4::Basic_registry`.
- struct `L4::Server_object_t < IFACE, BASE >`
Base class (template) for server implementing server objects.
- struct `L4::Server_object_x < Derived, IFACE, BASE >`
Helper class to implement p_dispatch based server objects.
- struct `L4::Irq_handler_object`
Server object base class for handling IRQ messages.

Namespaces

- namespace **L4**
L4 low-level kernel interface.

17.461.1 Detailed Description

IPC server loop.

17.466 I4/sys/cxx/ipc_types File Reference

```
#include "capability.h"
#include "types"
#include "ipc_basics"
Include dependency graph for ipc_types:
```

This graph shows which files directly or indirectly include this file:

Data Structures

- struct [L4::lpc::In_out< T >](#)
Mark an argument as in-out argument.
- struct [L4::lpc::As_value< T >](#)
Pass the argument as plain data value.
- struct [L4::lpc::Opt< T >](#)
Attribute for defining an optional RPC argument.

- class [L4::lpc::Small_buf](#)
A receive item for receiving a single object capability.
- class [L4::lpc::Gen_fpage](#)
Generic RPC base for typed message items.
- class [L4::lpc::Snd_fpage](#)
Send item or return item.
- class [L4::lpc::Rcv_fpage](#)
Non-small receive item.
- class [L4::lpc::Cap< T >](#)
Capability type for RPC interfaces (see [L4 : :Cap< T>](#)).

Namespaces

- namespace [L4](#)
[L4](#) low-level kernel interface.
- namespace [L4::lpc](#)
IPC related functionality.
- namespace [L4::lpc::Msg](#)
IPC Message related functionality.

Functions

- template<typename T >
[Cap< T > L4::lpc::make_cap](#) ([L4::Cap< T >](#) cap, unsigned rights) noexcept
Make an [L4::lpc::Cap< T>](#) for the given capability and rights.
- template<typename T >
[Cap< T > L4::lpc::make_cap_rw](#) ([L4::Cap< T >](#) cap) noexcept
Make an [L4::lpc::Cap< T>](#) for the given capability with [L4_CAP_FPAGE_RW](#) rights.
- template<typename T >
[Cap< T > L4::lpc::make_cap_rws](#) ([L4::Cap< T >](#) cap) noexcept
Make an [L4::lpc::Cap< T>](#) for the given capability with [L4_CAP_FPAGE_RWS](#) rights.
- template<typename T >
[Cap< T > L4::lpc::make_cap_full](#) ([L4::Cap< T >](#) cap) noexcept
Make an [L4::lpc::Cap< T>](#) for the given capability with full fpage and object-specific rights.

17.471 I4/sys/cxx/types File Reference

This graph shows which files directly or indirectly include this file:

Data Structures

- class [L4::Types::Flags< BITS_ENUM, UNDERLYING >](#)
Template for defining typical *Flags* bitmaps.
- struct [L4::Types::Int_for_type< T >](#)
Metafunction to get an integral type of the same size as *T*.
- struct [L4::Types::Flags_ops_t< DT >](#)
Mixin class to define a set of friend bitwise operators on *DT*.
- struct [L4::Types::Flags_t< DT, T >](#)
Template type to define a flags type with bitwise operations.
- struct [L4::Types::Bool< V >](#)
Boolean meta type.
- struct [L4::Types::False](#)
False meta value.
- struct [L4::Types::True](#)
True meta value.
- struct [L4::Types::Same< A, B >](#)
Compare two data types for equality.

Namespaces

- namespace [L4](#)
[L4](#) low-level kernel interface.
- namespace [L4::Types](#)
[L4](#) basic type helpers for C++.

Macros

- `#define L4_TYPES_FLAGS_OPS_DEF(T)`
Helper macro to define a set of bitwise operators on an enum type.

17.471.1 Macro Definition Documentation

17.471.1.1 L4_TYPES_FLAGS_OPS_DEF

```
#define L4_TYPES_FLAGS_OPS_DEF (
    T )
```

Value:

```
friend constexpr T operator ~ (T f)
{
    return T(~static_cast<typename L4::Types::Int_for_type<T>::type>(f));
}

friend constexpr T operator | (T l, T r)
{
    return T(static_cast<typename L4::Types::Int_for_type<T>::type>(l)
        | static_cast<typename L4::Types::Int_for_type<T>::type>(r));
}

friend constexpr T operator & (T l, T r)
{
    return T(static_cast<typename L4::Types::Int_for_type<T>::type>(l)
        & static_cast<typename L4::Types::Int_for_type<T>::type>(r));
}
```

Helper macro to define a set of bitwise operators on an enum type.

This allows to use the enum type as bitmask type with '&', '|', and '~' operators that keep the enum type as result.

17.479 l4/sys/exception File Reference

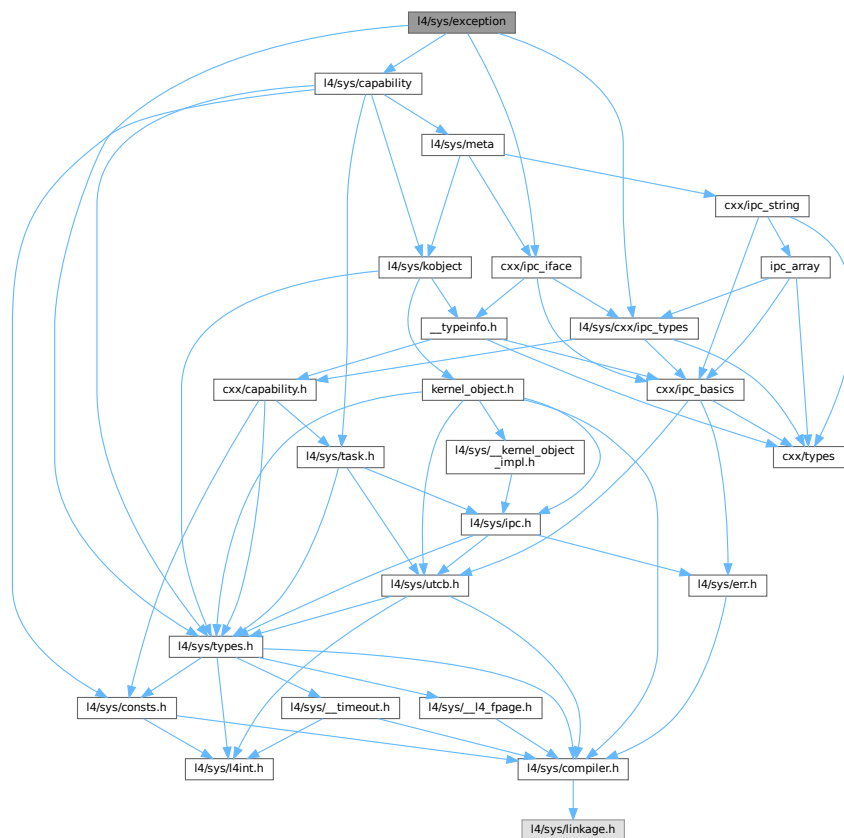

Exception C++ interface.

```

#include <l4/sys/capability>
#include <l4/sys/types.h>
#include <l4/sys/cxx/ipc_types>
#include <l4/sys/cxx/ipc_iface>

```

Include dependency graph for exception:

Data Structures

- class [L4::Exception](#)
Exception interface.

Namespaces

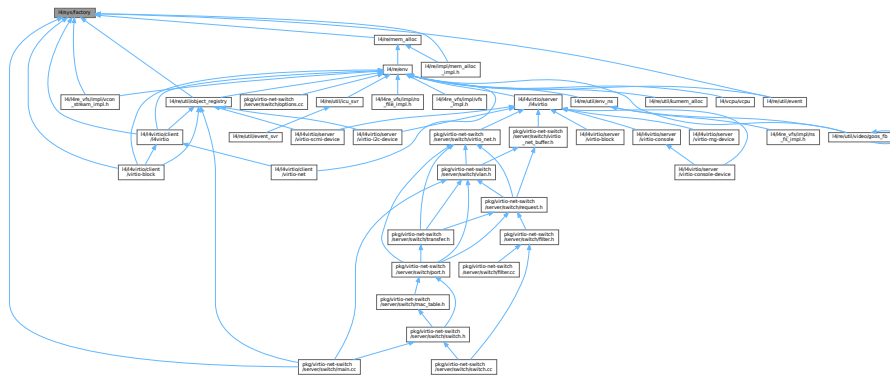

- namespace [L4](#)
L4 low-level kernel interface.

17.479.1 Detailed Description

Exception C++ interface.

Definition in file [exception](#).

This graph shows which files directly or indirectly include this file:

Data Structures

- class [L4::Factory](#)
C++ Factory interface, see [Factory](#) for the C interface.
- struct [L4::Factory::Nil](#)
Special type to add a void argument into the factory create stream.
- struct [L4::Factory::Lstr](#)
Special type to add a pascal string into the factory create stream.
- class [L4::Factory::S](#)
Stream class for the [create\(\)](#) argument stream.

Namespaces

- namespace [L4](#)
[L4](#) low-level kernel interface.

17.481.1 Detailed Description

Common factory related definitions.

Definition in file [factory](#).

17.483 l4/sys/factory.h File Reference

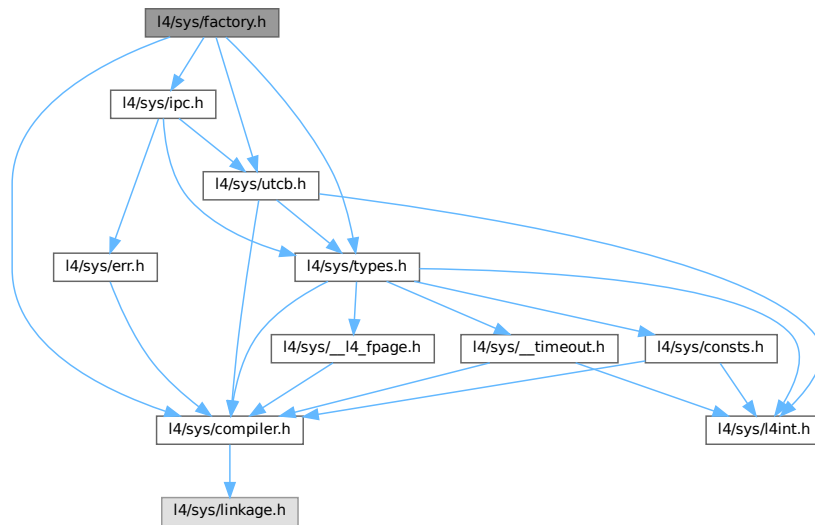

Common factory related definitions.

```

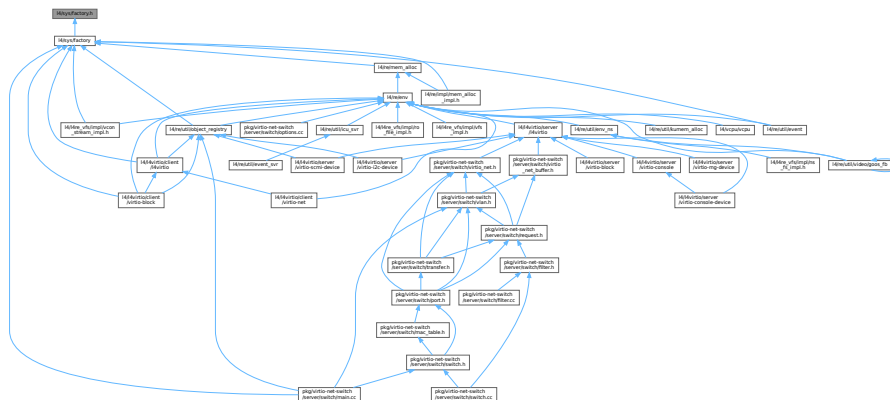

#include <l4/sys/compiler.h>
#include <l4/sys/types.h>
#include <l4/sys/utcb.h>
#include <l4/sys/ipc.h>

```

Include dependency graph for `factory.h`:

This graph shows which files directly or indirectly include this file:

Functions

- `I4_msgtag_t I4_factory_create_task (I4_cap_idx_t factory, I4_cap_idx_t target_cap, I4_fpage_t *utcb_area)`
`L4_NOTHROW`
Create a new task.
- `I4_msgtag_t I4_factory_create_thread (I4_cap_idx_t factory, I4_cap_idx_t target_cap)` `L4_NOTHROW`
Create a new thread.
- `I4_msgtag_t I4_factory_create_factory (I4_cap_idx_t factory, I4_cap_idx_t target_cap, unsigned long limit)`
`L4_NOTHROW`
Create a new factory.
- `I4_msgtag_t I4_factory_create_gate (I4_cap_idx_t factory, I4_cap_idx_t target_cap, I4_cap_idx_t thread_cap, I4_umword_t label)` `L4_NOTHROW`
Create a new IPC gate.

- [l4_msgtag_t l4_factory_create_irq](#) ([l4_cap_idx_t](#) factory, [l4_cap_idx_t](#) target_cap) [L4_NOTHROW](#)
Create a new IRQ sender.
- [l4_msgtag_t l4_factory_create_vm](#) ([l4_cap_idx_t](#) factory, [l4_cap_idx_t](#) target_cap) [L4_NOTHROW](#)
Create a new virtual machine.
- [l4_msgtag_t l4_factory_create_vcpu_context](#) ([l4_cap_idx_t](#) factory, [l4_cap_idx_t](#) target_cap) [L4_NOTHROW](#)
Create a new vCPU context.
- [l4_msgtag_t l4_factory_create](#) ([l4_cap_idx_t](#) factory, long obj, [l4_cap_idx_t](#) target) [L4_NOTHROW](#)
Create a new object.

Data Structures

- struct [l4_icu_info_t](#)
Info structure for an ICU.
- struct [l4_icu_msi_info_t](#)
Info to use for a specific MSI.

Typedefs

- typedef struct [l4_icu_info_t](#) [l4_icu_info_t](#)
Info structure for an ICU.
- typedef struct [l4_icu_msi_info_t](#) [l4_icu_msi_info_t](#)
Info to use for a specific MSI.

Enumerations

- enum [L4_icu_flags](#) { [L4_ICU_FLAG_MSI](#) }
Flags for IRQ numbers used for the ICU.
- enum [L4_irq_mode](#) {
[L4_IRQ_F_NONE](#) = 0 , [L4_IRQ_F_SET_MODE](#) = 0x1 , [L4_IRQ_F_LEVEL](#) = 0x2 , [L4_IRQ_F_EDGE](#) = 0x0 ,

Opcodes to the ICU interface.

Functions

- [l4_msgtag_t l4_icu_bind](#) ([l4_cap_idx_t](#) icu, unsigned irqnum, [l4_cap_idx_t](#) irq) [L4_NOTHROW](#)
Bind an interrupt line of an interrupt controller to an interrupt object.
- [l4_msgtag_t l4_icu_bind_u](#) ([l4_cap_idx_t](#) icu, unsigned irqnum, [l4_cap_idx_t](#) irq, [l4_utcb_t](#) *utcb) [L4_NOTHROW](#)
Bind an interrupt line of an interrupt controller to an interrupt object.
- [l4_msgtag_t l4_icu_unbind](#) ([l4_cap_idx_t](#) icu, unsigned irqnum, [l4_cap_idx_t](#) irq) [L4_NOTHROW](#)
Remove binding of an interrupt line from the interrupt controller object.
- [l4_msgtag_t l4_icu_unbind_u](#) ([l4_cap_idx_t](#) icu, unsigned irqnum, [l4_cap_idx_t](#) irq, [l4_utcb_t](#) *utcb) [L4_NOTHROW](#)
Remove binding of an interrupt line from the interrupt controller object.
- [l4_msgtag_t l4_icu_set_mode](#) ([l4_cap_idx_t](#) icu, unsigned irqnum, [l4_umword_t](#) mode) [L4_NOTHROW](#)
Set interrupt mode.
- [l4_msgtag_t l4_icu_set_mode_u](#) ([l4_cap_idx_t](#) icu, unsigned irqnum, [l4_umword_t](#) mode, [l4_utcb_t](#) *utcb) [L4_NOTHROW](#)
Set interrupt mode.
- [l4_msgtag_t l4_icu_info](#) ([l4_cap_idx_t](#) icu, [l4_icu_info_t](#) *info) [L4_NOTHROW](#)
Get information about the ICU features.
- [l4_msgtag_t l4_icu_info_u](#) ([l4_cap_idx_t](#) icu, [l4_icu_info_t](#) *info, [l4_utcb_t](#) *utcb) [L4_NOTHROW](#)
Get information about the ICU features.
- [l4_msgtag_t l4_icu_msi_info](#) ([l4_cap_idx_t](#) icu, unsigned irqnum, [l4_uint64_t](#) source, [l4_icu_msi_info_t](#) *msi_info) [L4_NOTHROW](#)
Get MSI info about IRQ.
- [l4_msgtag_t l4_icu_msi_info_u](#) ([l4_cap_idx_t](#) icu, unsigned irqnum, [l4_uint64_t](#) source, [l4_icu_msi_info_t](#) *msi_info, [l4_utcb_t](#) *utcb) [L4_NOTHROW](#)
Get MSI info about IRQ.
- [l4_msgtag_t l4_icu_unmask](#) ([l4_cap_idx_t](#) icu, unsigned irqnum, [l4_umword_t](#) *label, [l4_timeout_t](#) to) [L4_NOTHROW](#)
Unmask an IRQ line.
- [l4_msgtag_t l4_icu_unmask_u](#) ([l4_cap_idx_t](#) icu, unsigned irqnum, [l4_umword_t](#) *label, [l4_timeout_t](#) to, [l4_utcb_t](#) *utcb) [L4_NOTHROW](#)
Unmask the given interrupt line.
- [l4_msgtag_t l4_icu_mask](#) ([l4_cap_idx_t](#) icu, unsigned irqnum, [l4_umword_t](#) *label, [l4_timeout_t](#) to) [L4_NOTHROW](#)
Mask an IRQ line.
- [l4_msgtag_t l4_icu_mask_u](#) ([l4_cap_idx_t](#) icu, unsigned irqnum, [l4_umword_t](#) *label, [l4_timeout_t](#) to, [l4_utcb_t](#) *utcb) [L4_NOTHROW](#)
Mask an IRQ line.

17.487.1 Detailed Description

Interrupt controller.

Definition in file [icu.h](#).

17.488 icu.h

Error codes in the error TCR.

Functions

- `l4_umword_t l4_ipc_error (l4_msgtag_t tag, l4_utcb_t *utcb) L4_NOTHROW`
Get the IPC error code for an IPC operation.
- `long l4_error (l4_msgtag_t tag) L4_NOTHROW`
Get IPC error code if any or message tag label otherwise for an IPC call.
- `int l4_ipc_is_snd_error (l4_utcb_t *utcb) L4_NOTHROW`
Returns whether an error occurred in send phase of an invocation.
- `int l4_ipc_is_rcv_error (l4_utcb_t *utcb) L4_NOTHROW`

- Returns whether an error occurred in receive phase of an invocation.*
- `int l4_ipc_error_code (l4_utcb_t *utcb) L4_NOTHROW`
Get the error condition of the last invocation from the TCR.
- `long l4_ipc_to_errno (unsigned long ipc_error_code) L4_NOTHROW`
Get a negative error code for the given IPC error code.
- `l4_msgtag_t l4_ipc_send (l4_cap_idx_t dest, l4_utcb_t *utcb, l4_msgtag_t tag, l4_timeout_t timeout) L4_NOTHROW`
*Send a message to an object (do **not** wait for a reply).*
- `l4_msgtag_t l4_ipc_wait (l4_utcb_t *utcb, l4_umword_t *label, l4_timeout_t timeout) L4_NOTHROW`
Wait for an incoming message from any possible sender.
- `l4_msgtag_t l4_ipc_receive (l4_cap_idx_t object, l4_utcb_t *utcb, l4_timeout_t timeout) L4_NOTHROW`
Wait for a message from a specific source.
- `l4_msgtag_t l4_ipc_call (l4_cap_idx_t object, l4_utcb_t *utcb, l4_msgtag_t tag, l4_timeout_t timeout) L4_NOTHROW`
Object call (usual invocation).
- `l4_msgtag_t l4_ipc_reply_and_wait (l4_utcb_t *utcb, l4_msgtag_t tag, l4_umword_t *label, l4_timeout_t timeout) L4_NOTHROW`
Reply and wait operation (uses the reply capability).
- `l4_msgtag_t l4_ipc_send_and_wait (l4_cap_idx_t dest, l4_utcb_t *utcb, l4_msgtag_t tag, l4_umword_t *label, l4_timeout_t timeout) L4_NOTHROW`
Send a message and do an open wait.
- `l4_msgtag_t l4_ipc (l4_cap_idx_t dest, l4_utcb_t *utcb, l4_umword_t flags, l4_umword_t slabel, l4_msgtag_t tag, l4_umword_t *rlabel, l4_timeout_t timeout) L4_NOTHROW`
Generic L4 object invocation.
- `l4_msgtag_t l4_ipc_sleep (l4_timeout_t timeout) L4_NOTHROW`
Sleep for an amount of time.
- `l4_msgtag_t l4_ipc_sleep_ms (l4_uint32_t ms) L4_NOTHROW`
Sleep for a certain amount of milliseconds.
- `l4_msgtag_t l4_ipc_sleep_us (l4_uint64_t us) L4_NOTHROW`
Sleep for a certain amount of microseconds.
- `int l4_sndfpage_add (l4_fpage_t const snd_fpage, unsigned long snd_base, l4_msgtag_t *tag) L4_NOTHROW`
Add a flexpage to be sent to the UTCB.

17.493.1 Detailed Description

Common IPC interface.

Definition in file [ipc.h](#).

17.493.2 Function Documentation

17.493.2.1 l4_ipc_to_errno()

```
long l4_ipc_to_errno (
    unsigned long ipc_error_code ) [inline]
```

Get a negative error code for the given IPC error code.

Parameters

| | |
|-----------------------------|---|
| <code>ipc_error_code</code> | IPC error code as delivered by the kernel. (or returned by the l4_ipc_error_code() function). |
|-----------------------------|---|

Returns

negative error code in the range of [L4_EIPC_LO](#) to [L4_EIPC_HI](#).

Definition at line 561 of file [ipc.h](#).

References [L4_EIPC_LO](#).

17.499.1 Detailed Description

The C IPC gate interface, see [L4::ipc_gate](#) for the C++ interface.

IPC gates are used to create secure communication channels between protection domains. An IPC gate can be created using the [Factory](#) interface.

Depending on the permissions of the capability used, an IPC gate forwards IPC to the [Thread](#) that is *bound* to the IPC gate (cf. [l4_rcv_ep_bind_thread\(\)](#)). If the capability has the [L4_FPAGE_C_IPCGATE_SVR](#) permission, only IPC using a protocol different from the [L4_PROTO_KOBJECT](#) protocol is forwarded. Without the [L4_FPAGE_C_IPCGATE_SVR](#) permission, all IPC is forwarded. The latter is the usual case for a client in a client/server scenario. When no thread is bound yet, the forwarded IPC blocks until a thread is bound or the IPC times out.

Forwarded IPC is always forwarded to the userland of the bound thread. That means, the [Thread](#) interface of the bound thread is not accessible via an IPC gate. The [IPC-Gate API](#) of an IPC gate is only accessible if the capability used has the [L4_FPAGE_C_IPCGATE_SVR](#) permission (cf. previous paragraph). Conversely that means, if the capability used lacks the [L4_FPAGE_C_IPCGATE_SVR](#) permission, [IPC-Gate API](#) calls are forwarded to the bound thread instead of being processed by the IPC gate itself. In a client/server scenario, a client should only get IPC gate capabilities without [L4_FPAGE_C_IPCGATE_SVR](#) permission so the client cannot tamper with the IPC gate.

When binding a thread to an IPC gate, a user-defined, kernel protected, machine-word sized payload called the IPC gate's *label* is assigned to the IPC gate (note that the two least significant bits of the label must be zero; cf. [l4_rcv_ep_bind_thread\(\)](#)). When a send-only IPC or call IPC is forwarded via an IPC gate, the label provided by the sender is ignored and replaced by the IPC gate's label where the two least significant bits are set to the [L4_CAP_FPAGE_S](#) and [L4_CAP_FPAGE_W](#) permissions of the capability used. The replaced label is only visible to the bound thread upon receive. However, the configured label of an IPC gate can also be queried via [l4_ipc_gate_get_infos\(\)](#) if the capability used has the [L4_FPAGE_C_IPCGATE_SVR](#) permission.

When deleting an IPC gate or when unbinding it from a thread, the label of IPC already in flight won't be changed. To ensure that no IPC from this IPC gate is received by a thread with an unexpected label, [l4_thread_modify_sender_start\(\)](#) shall be used to change the labels of every pending IPC to that gate. This is also required if the label of an already bound IPC gate is changed. It is not necessary after binding the IPC gate to a thread for the first time.

When binding a new thread to an IPC gate that is currently bound, the same label should be used that was used with the old thread. Otherwise the old and the new thread need to synchronize to avoid IPC messages with unexpected labels.

Include File

```
#include <l4/sys/ipc_gate.h>
```

For the C++ interface refer to the [L4::ipc_gate](#) documentation.

17.503 l4/sys/kdebug.h File Reference

Functionality for invoking the kernel debugger.

```

#include <l4/sys/compiler.h>
#include <l4/sys/consts.h>
#include <l4/sys/ipc.h>
Include dependency graph for kdebug.h:
```

This graph shows which files directly or indirectly include this file:

Enumerations

- enum [l4_kdebug_group_t](#)
Opcode groups for operations that can be invoked on the base debugger capability.
- enum [l4_kdebug_ops_t](#)
Op-codes for operations that can be invoked on the base debugger capability.

Functions

- void [enter_kdebug](#) (char const *text) [L4_NOTHROW](#)
Enter the kernel debugger.
- [l4_msgtag_t __kdebug_op](#) (unsigned op) [L4_NOTHROW](#)
Invoke a nullary operation on the base debugger capability.
- [l4_msgtag_t __kdebug_text](#) (unsigned op, char const *text, unsigned len) [L4_NOTHROW](#)
Invoke a text output operation on the base debugger capability.
- [l4_msgtag_t __kdebug_3_text](#) (unsigned op, char const *text, unsigned len, [l4_umword_t](#) v1, [l4_umword_t](#) v2, [l4_umword_t](#) v3) [L4_NOTHROW](#)
Invoke a text output operation with 3 additional machine word arguments on the base debugger capability.
- [l4_msgtag_t __kdebug_op_1](#) (unsigned op, [l4_mword_t](#) val) [L4_NOTHROW](#)
Invoke an unary operation on the base debugger capability.
- void [outnstring](#) (char const *text, unsigned len)
Output a fixed-length string via the kernel debugger.
- void [outstring](#) (char const *text)
Output a string via the kernel debugger.
- void [outchar](#) (char c)
Output a single character via the kernel debugger.
- void [outumword](#) ([l4_umword_t](#) number)
Output a hexadecimal unsigned machine word via the kernel debugger.
- void [outhex64](#) ([l4_uint64_t](#) number)
Output a 64-bit unsigned hexadecimal number via the kernel debugger.
- void [outhex32](#) ([l4_uint32_t](#) number)

- Output a 32-bit unsigned hexadecimal number via the kernel debugger.*
- void [outhex20](#) ([l4_uint32_t](#) number)
- Output a 20-bit unsigned hexadecimal number via the kernel debugger.*
- void [outhex16](#) ([l4_uint16_t](#) number)
- Output a 16-bit unsigned hexadecimal number via the kernel debugger.*
- void [outhex12](#) ([l4_uint16_t](#) number)
- Output a 12-bit unsigned hexadecimal number via the kernel debugger.*
- void [outhex8](#) ([l4_uint8_t](#) number)
- Output an 8-bit unsigned hexadecimal number via the kernel debugger.*
- void [outdec](#) ([l4_mword_t](#) number)
- Output a decimal unsigned machine word via the kernel debugger.*

17.503.1 Detailed Description

Functionality for invoking the kernel debugger.

Definition in file [kdebug.h](#).

17.503.2 Enumeration Type Documentation

17.503.2.1 l4_kdebug_ops_t

enum [l4_kdebug_ops_t](#)

Op-codes for operations that can be invoked on the base debugger capability.

See also [__ktrace-impl.h](#) for additional op-codes.

Definition at line 44 of file [kdebug.h](#).

17.503.3 Function Documentation

17.503.3.1 __kdebug_3_text()

```
l4_msgtag_t __kdebug_3_text (
    unsigned op,
    char const * text,
    unsigned len,
    l4_umword_t v1,
    l4_umword_t v2,
    l4_umword_t v3 ) [inline]
```

Invoke a text output operation with 3 additional machine word arguments on the base debugger capability.

Parameters

| | |
|-------------|--|
| <i>op</i> | Text output operation code from l4_kdebug_ops_t or a value above 0x200 used by the kernel trace buffer implementation (__ktrace-impl.h). |
| <i>text</i> | Output string. |
| <i>len</i> | Length of the output string. The maximum length is limited to <code>L4_UTCB_GENERIC_DATA_SIZE - 5</code> machine words. Output strings longer than this limit will be cropped. |
| <i>v1</i> | First machine word argument. |
| <i>v2</i> | Second machine word argument. |
| <i>v3</i> | Third machine word argument. |

Return values

| | |
|----------------|--|
| <i>Message</i> | tag returned from the IPC on the base debugger capability. |
|----------------|--|

Definition at line 139 of file [kdebug.h](#).

Here is the caller graph for this function:

17.503.3.2 __kdebug_op()

```
l4_msgtag_t __kdebug_op (
    unsigned op ) [inline]
```

Invoke a nullary operation on the base debugger capability.

Parameters

| | |
|-----------|--|
| <i>op</i> | Nullary operation code from l4_kdebug_ops_t or a value above 0x200 used by the kernel trace buffer implementation (__ktrace-impl.h). |
|-----------|--|

Return values

| | |
|----------------|--|
| <i>Message</i> | tag returned from the IPC on the base debugger capability. |
|----------------|--|

17.503.3.3 __kdebug_op_1()

```

l4_msgtag_t __kdebug_op_1 (
    unsigned op,
    l4_mword_t val ) [inline]
  
```

Invoke an unary operation on the base debugger capability.

Parameters

| | |
|------------|--|
| <i>op</i> | Unary operation code from l4_kdebug_ops_t or a value above 0x200 used by the kernel trace buffer implementation (__ktrace-impl.h). |
| <i>val</i> | Machine word argument to the unary operation. |

Return values

| | |
|----------------|--|
| <i>Message</i> | tag returned from the IPC on the base debugger capability. |
|----------------|--|

Definition at line 176 of file [kdebug.h](#).

```

l4_msgtag_t __kdebug_text (
    unsigned op,
    char const * text,
    unsigned len ) [inline]

```

Invoke a text output operation on the base debugger capability.

Parameters

| | |
|-------------|--|
| <i>op</i> | Text output operation code from l4_kdebug_ops_t or a value above 0x200 used by the kernel trace buffer implementation (__ktrace-impl.h). |
| <i>text</i> | Output string. |

Here is the caller graph for this function:

17.503.3.5 enter_kdebug()

```
void enter_kdebug (
    char const * text ) [inline]
```

Enter the kernel debugger.

Parameters

| | |
|-------------|---|
| <i>text</i> | Optional message displayed by the kernel debugger when entered. |
|-------------|---|

Enter the kernel debugger, if configured. An optional message can be passed to the kernel debugger which is printed upon the entering of the debugger.

Examples

Here is the call graph for this function:

17.503.3.6 outchar()

```
void outchar (  
    char c ) [inline]
```

Output a single character via the kernel debugger.

Parameters

| | |
|----------|-------------------|
| <i>c</i> | Output character. |
|----------|-------------------|

Definition at line 245 of file [kdebug.h](#).

References [__kdebug_op_1\(\)](#).

Here is the call graph for this function:

17.503.3.7 outdec()

```
void outdec (
    l4_mword_t number ) [inline]
```

Output a decimal unsigned machine word via the kernel debugger.

Parameters

| | |
|---------------|----------------------|
| <i>number</i> | Output machine word. |
|---------------|----------------------|

Definition at line 334 of file `kdebug.h`.

References `__kdebug_op_1()`.

Here is the call graph for this function:

17.503.3.8 outhex12()

```
void outhex12 (
    l4_uint16_t number ) [inline]
```

Output a 12-bit unsigned hexadecimal number via the kernel debugger.

Parameters

| | |
|---------------|--|
| <i>number</i> | Output 12-bit number. Only the 12 LSB bits are used. |
|---------------|--|

Definition at line 314 of file [kdebug.h](#).

References [__kdebug_op_1\(\)](#).

Here is the call graph for this function:

17.503.3.9 outhex16()

```
void outhex16 (  
    l4_uint16_t number ) [inline]
```

Output a 16-bit unsigned hexadecimal number via the kernel debugger.

Parameters

| | |
|---------------|-----------------------|
| <i>number</i> | Output 16-bit number. |
|---------------|-----------------------|

Definition at line 304 of file [kdebug.h](#).

References [__kdebug_op_1\(\)](#).

Here is the call graph for this function:

17.503.3.10 outhex20()

```
void outhex20 (
    14_uint32_t number ) [inline]
```

Output a 20-bit unsigned hexadecimal number via the kernel debugger.

Parameters

| | |
|---------------|--|
| <i>number</i> | Output 20-bit number. Only the 20 LSB bits are used. |
|---------------|--|

Definition at line 294 of file [kdebug.h](#).

References [__kdebug_op_1\(\)](#).

Here is the call graph for this function:

17.503.3.11 outhex32()

```
void outhex32 (
    14_uint32_t number ) [inline]
```

Output a 32-bit unsigned hexadecimal number via the kernel debugger.

Parameters

| | |
|---------------|-----------------------|
| <i>number</i> | Output 32-bit number. |
|---------------|-----------------------|

Definition at line 284 of file [kdebug.h](#).

References [__kdebug_op_1\(\)](#).

Here is the call graph for this function:

17.503.3.12 outhex64()

```
void outhex64 (
    l4_uint64_t number ) [inline]
```

Output a 64-bit unsigned hexadecimal number via the kernel debugger.

Parameters

| | |
|---------------|-----------------------|
| <i>number</i> | Output 64-bit number. |
|---------------|-----------------------|

The two 32-bit halves are printed non-atomically.

Definition at line 273 of file [kdebug.h](#).

References [__kdebug_op_1\(\)](#).

Here is the call graph for this function:

17.503.3.13 outhex8()

```
void outhex8 (
    l4_uint8_t number ) [inline]
```

Output an 8-bit unsigned hexadecimal number via the kernel debugger.

Parameters

| | |
|---------------|----------------------|
| <i>number</i> | Output 8-bit number. |
|---------------|----------------------|

Definition at line 324 of file [kdebug.h](#).

References [__kdebug_op_1\(\)](#).

Here is the call graph for this function:

17.503.3.14 outnstring()

```
void outnstring (
    char const * text,
    unsigned len ) [inline]
```

Output a fixed-length string via the kernel debugger.

Parameters

| | |
|-------------|--|
| <i>text</i> | Beginning of the output string. |
| <i>len</i> | Length of the output string. The maximum length is limited to <code>L4_UTCB_GENERIC_DATA_SIZE - 2</code> machine words. Output strings longer than this limit will be cropped. |

Definition at line 226 of file [kdebug.h](#).

References [__kdebug_text\(\)](#).

Referenced by [outstring\(\)](#).

Here is the call graph for this function:

Here is the caller graph for this function:

17.503.3.15 outstring()

```
void outstring (
    char const * text ) [inline]
```

Output a string via the kernel debugger.

Parameters

| | |
|-------------|--|
| <i>text</i> | Beginning of the output string. The maximum length of the output string is limited to <code>L4_UTCB_GENERIC_DATA_SIZE - 2</code> machine words. Output strings longer than this limit will be cropped. |
|-------------|--|

Definition at line 237 of file [kdebug.h](#).

References [outnstring\(\)](#).

Here is the call graph for this function:

17.503.3.16 outumword()

```
void outumword (
    l4_umword_t number ) [inline]
```

Output a hexadecimal unsigned machine word via the kernel debugger.

Parameters

| | |
|---------------|----------------------|
| <i>number</i> | Output machine word. |
|---------------|----------------------|

If the machine word is 64 bits long, it is printed non-atomically as two 32-bit numbers.

Definition at line 258 of file [kdebug.h](#).

References [__kdebug_op_1\(\)](#).

17.512 l4/sys/ktrace.h File Reference

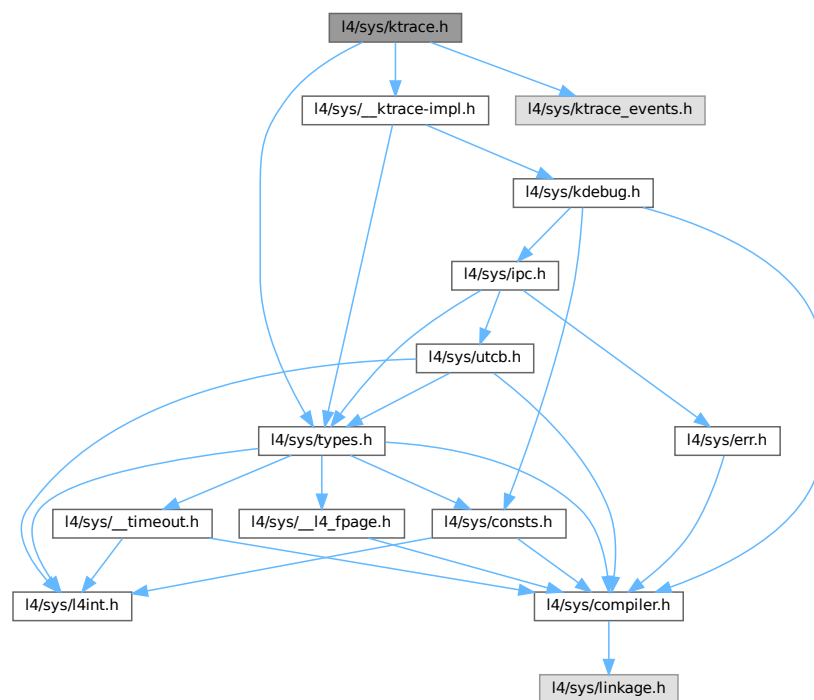

L4 kernel event tracing.

```

#include <l4/sys/types.h>
#include <l4/sys/ktrace_events.h>
#include <l4/sys/__ktrace-impl.h>

```

Include dependency graph for ktrace.h:

Functions

- [l4_umword_t fiasco_tbuf_log](#) (const char *text)
Create new trace-buffer entry with describing <text>.
- [l4_umword_t fiasco_tbuf_log_3val](#) (const char *text, [l4_umword_t](#) v1, [l4_umword_t](#) v2, [l4_umword_t](#) v3)
Create new trace-buffer entry with describing <text> and three additional values.
- [l4_umword_t fiasco_tbuf_log_binary](#) (const unsigned char *data)
Create new trace-buffer entry with binary data.
- void **fiasco_tbuf_clear** (void)
Clear trace-buffer.
- void **fiasco_tbuf_dump** (void)
Dump trace-buffer to kernel console.

```

17.524 l4/sys/memdesc.h File Reference

Memory description functions.

```
#include <l4/sys/kip.h>
```

Include dependency graph for memdesc.h:

Data Structures

- struct [l4_kernel_info_mem_desc_t](#)
Memory descriptor data structure.

Typedefs

- typedef struct [l4_kernel_info_mem_desc_t](#) [l4_kernel_info_mem_desc_t](#)
Memory descriptor data structure.

Enumerations

- enum `l4_mem_type_t` {
`l4_mem_type_undefined` = 0x0 , `l4_mem_type_conventional` = 0x1 , `l4_mem_type_reserved` = 0x2 ,
`l4_mem_type_dedicated` = 0x3 ,
`l4_mem_type_shared` = 0x4 , `l4_mem_type_info` = 0xd , `l4_mem_type_bootloader` = 0xe , `l4_mem_type_archspecific`
= 0xf }
Type of a memory descriptor.
- enum `l4_mem_info_sub_type_t` { `l4_mem_info_acpi_rsdp` = 0 }
Memory sub types for l4_mem_type_info descriptors.
- enum `l4_mem_archspecific_sub_type_common_t` { `l4_mem_archspecific_acpi_tables` = 3 , `l4_mem_archspecific_acpi_nvs`
= 4 }
Memory sub types for l4_mem_type_archspecific descriptors.

Functions

- `l4_kernel_info_mem_desc_t * l4_kernel_info_get_mem_descs (l4_kernel_info_t *kip) L4_NOTHROW`
Get pointer to memory descriptors from KIP.
- unsigned `l4_kernel_info_get_num_mem_descs (l4_kernel_info_t *kip) L4_NOTHROW`
Get number of memory descriptors in KIP.
- void `l4_kernel_info_set_mem_desc (l4_kernel_info_mem_desc_t *md, l4_addr_t start, l4_addr_t end, unsigned type, unsigned virt, unsigned sub_type) L4_NOTHROW`
Populate a memory descriptor.
- `l4_umword_t l4_kernel_info_get_mem_desc_start (l4_kernel_info_mem_desc_t *md) L4_NOTHROW`
Get start address of the region described by the memory descriptor.
- `l4_umword_t l4_kernel_info_get_mem_desc_end (l4_kernel_info_mem_desc_t *md) L4_NOTHROW`
Get end address of the region described by the memory descriptor.
- `l4_umword_t l4_kernel_info_get_mem_desc_type (l4_kernel_info_mem_desc_t *md) L4_NOTHROW`
Get type of the memory region.
- `l4_umword_t l4_kernel_info_get_mem_desc_subtype (l4_kernel_info_mem_desc_t *md) L4_NOTHROW`
Get sub-type of memory region.
- `l4_umword_t l4_kernel_info_get_mem_desc_is_virtual (l4_kernel_info_mem_desc_t *md) L4_NOTHROW`
Get virtual flag of the memory descriptor.

Retrieve information from the kernel about all objects in the mapping database and write data to the passed KU memory.

17.529.1 Detailed Description

Debugger related functions.

Attention

This API is subject to change!

Definition in file [obj_info.h](#).

17.529.2 Function Documentation

17.529.2.1 l4_debugger_query_obj_infos()

```
l4_msgtag_t l4_debugger_query_obj_infos (
    l4_cap_idx_t cap,
    l4_addr_t ku_mem_addr,
    l4_size_t ku_mem_size,
    l4_umword_t skip,
    l4_umword_t * result_cnt,
    l4_umword_t * result_all ) [inline]
```

Retrieve information from the kernel about all objects in the mapping database and write data to the passed KU memory.

Parameters

| | | |
|-----|--------------------|---|
| | <i>cap</i> | Capability of the debugger object. |
| | <i>ku_mem_addr</i> | Address of the KU memory for writing the information. |
| | <i>ku_mem_size</i> | Size of the KU memory to writing the information. |
| | <i>skip</i> | Number of objects to skip. |
| out | <i>result_cnt</i> | Number of objects in the mapping database. |
| out | <i>result_all</i> | Number of objects written to the KU memory. |

Note

The kernel will only write a number of object information which fits to the passed KU memory. To retrieve missing object information, repeat the call and adapt the *skip* parameter accordingly.

If this system call is performed several times, the number of kernel objects might have changed in the meantime.

```

Include dependency graph for platform_control.h:

This graph shows which files directly or indirectly include this file:

Enumerations

- enum `L4_platform_ctl_ops` {
`L4_PLATFORM_CTL_SYS_SUSPEND_OP = 0UL` , `L4_PLATFORM_CTL_SYS_SHUTDOWN_OP = 1UL` ,
`L4_PLATFORM_CTL_CPU_ALLOW_SHUTDOWN_OP = 2UL` , `L4_PLATFORM_CTL_CPU_ENABLE_OP = 3UL` ,
`L4_PLATFORM_CTL_CPU_DISABLE_OP = 4UL` , `L4_PLATFORM_CTL_SET_TASK_ASID_OP = 0x10UL` }
Operations on platform-control objects.
- enum `L4_platform_ctl_proto` { `L4_PROTO_PLATFORM_CTL = 0` }
Predefined protocol type for messages to platform-control objects.

Functions

- `l4_msgtag_t l4_platform_ctl_system_suspend (l4_cap_idx_t pfc, l4_umword_t extras) L4_NOTHROW`
Enter suspend to RAM.
- `l4_msgtag_t l4_platform_ctl_system_shutdown (l4_cap_idx_t pfc, l4_umword_t reboot) L4_NOTHROW`
Shutdown or reboot the system.
- `l4_msgtag_t l4_platform_ctl_cpu_allow_shutdown (l4_cap_idx_t pfc, l4_umword_t phys_id, l4_umword_t enable) L4_NOTHROW`
Allow a CPU to be shut down.
- `l4_msgtag_t l4_platform_ctl_cpu_enable (l4_cap_idx_t pfc, l4_umword_t phys_id) L4_NOTHROW`
Enable an offline CPU.
- `l4_msgtag_t l4_platform_ctl_cpu_disable (l4_cap_idx_t pfc, l4_umword_t phys_id) L4_NOTHROW`
Disable an online CPU.

Functions

- `l4_msgtag_t l4_task_map (l4_cap_idx_t dst_task, l4_cap_idx_t src_task, l4_fpage_t snd_fpage, l4_umword_t snd_base) L4_NOTHROW`
Map resources available in the source task to a destination task.
- `l4_msgtag_t l4_task_unmap (l4_cap_idx_t task, l4_fpage_t fpage, l4_umword_t map_mask) L4_NOTHROW`
Revoke rights from the task.
- `l4_msgtag_t l4_task_unmap_batch (l4_cap_idx_t task, l4_fpage_t const *fpages, unsigned num_fpages, l4_umword_t map_mask) L4_NOTHROW`
Revoke rights from a task.
- `l4_msgtag_t l4_task_delete_obj (l4_cap_idx_t task, l4_cap_idx_t obj) L4_NOTHROW`
Release capability and delete object.
- `l4_msgtag_t l4_task_release_cap (l4_cap_idx_t task, l4_cap_idx_t cap) L4_NOTHROW`
Release object capability.
- `l4_msgtag_t l4_task_cap_valid (l4_cap_idx_t task, l4_cap_idx_t cap) L4_NOTHROW`
Check whether a capability is present (refers to an object).
- `l4_msgtag_t l4_task_cap_equal (l4_cap_idx_t task, l4_cap_idx_t cap_a, l4_cap_idx_t cap_b) L4_NOTHROW`
Test whether two capabilities point to the same object with the same rights.
- `l4_msgtag_t l4_task_add_ku_mem (l4_cap_idx_t task, l4_fpage_t *ku_mem) L4_NOTHROW`
Add kernel-user memory.

```

Include dependency graph for types.h:

This graph shows which files directly or indirectly include this file:

Data Structures

- struct [l4_msgtag_t](#)
Message tag data structure.

Typedefs

- typedef struct [l4_msgtag_t](#) [l4_msgtag_t](#)
Message tag data structure.
- typedef unsigned long [l4_cap_idx_t](#)
Capability selector type.

Enumerations

- enum [l4_msgtag_protocol](#) {
[L4_PROTO_NONE](#) = 0 , [L4_PROTO_ALLOW_SYSCALL](#) = 1 , [L4_PROTO_PF_EXCEPTION](#) = 1 ,
[L4_PROTO_IRQ](#) = -1L ,
[L4_PROTO_PAGE_FAULT](#) = -2L , [L4_PROTO_EXCEPTION](#) = -5L , [L4_PROTO_SIGMA0](#) = -6L ,

[L4_PROTO_DEBUGGER](#) = -23L , [L4_PROTO_SMCCC](#) = -24L , [L4_PROTO_VCPU_CONTEXT](#) = -25L }
Message tag for IPC operations.
- enum [l4_msgtag_flags](#) { [L4_MSGTAG_ERROR](#) , [L4_MSGTAG_TRANSFER_FPU](#) , [L4_MSGTAG_SCHEDULE](#)
, [L4_MSGTAG_PROPAGATE](#) = 0x4000 , [L4_MSGTAG_FLAGS](#) }
Flags for message tags.

Functions

- [l4_msgtag_t](#) [l4_msgtag](#) (long label, unsigned words, unsigned items, unsigned flags) [L4_NOTHROW](#)
Create a message tag from the specified values.
- long [l4_msgtag_label](#) ([l4_msgtag_t](#)) [L4_NOTHROW](#)
Get the protocol of tag.
- unsigned [l4_msgtag_words](#) ([l4_msgtag_t](#)) [L4_NOTHROW](#)
Get the number of untyped words.
- unsigned [l4_msgtag_items](#) ([l4_msgtag_t](#)) [L4_NOTHROW](#)
Get the number of typed items.
- unsigned [l4_msgtag_flags](#) ([l4_msgtag_t](#)) [L4_NOTHROW](#)
Get the flags.
- unsigned [l4_msgtag_has_error](#) ([l4_msgtag_t](#)) [L4_NOTHROW](#)
Test for error indicator flag.
- unsigned [l4_msgtag_is_page_fault](#) ([l4_msgtag_t](#)) [L4_NOTHROW](#)
Test for page-fault protocol.
- unsigned [l4_msgtag_is_exception](#) ([l4_msgtag_t](#)) [L4_NOTHROW](#)
Test for exception protocol.
- unsigned [l4_msgtag_is_sigma0](#) ([l4_msgtag_t](#)) [L4_NOTHROW](#)
Test for sigma0 protocol.

- unsigned [l4_msgtag_is_io_page_fault](#) ([l4_msgtag_t](#) t) [L4_NOTHROW](#)
Test for IO-page-fault protocol.
- unsigned [l4_is_invalid_cap](#) ([l4_cap_idx_t](#) c) [L4_NOTHROW](#)
Test if a capability selector is the invalid capability.
- unsigned [l4_is_valid_cap](#) ([l4_cap_idx_t](#) c) [L4_NOTHROW](#)
Test if a capability selector is a valid selector.
- unsigned [l4_capability_equal](#) ([l4_cap_idx_t](#) c1, [l4_cap_idx_t](#) c2) [L4_NOTHROW](#)
Test if the capability indices of two capability selectors are equal.
- [l4_cap_idx_t](#) [l4_capability_next](#) ([l4_cap_idx_t](#) c) [L4_NOTHROW](#)
Get the next capability selector after c.

17.566.1 Detailed Description

Common [L4](#) ABI Data Types.

Definition in file [types.h](#).

17.566.2 Function Documentation

17.566.2.1 [l4_capability_next\(\)](#)

```
l4\_cap\_idx\_t l4_capability_next (
    l4\_cap\_idx\_t c ) [inline]
```

Get the next capability selector after c.

Parameters

| | |
|-------------------|--|
| c | The capability selector for which the next selector shall be computed. |
|-------------------|--|

Returns

The next capability selector after c.

Definition at line [456](#) of file [types.h](#).

17.574 l4/sys/utcb.h File Reference

UTCB definitions.

```

#include <l4/sys/types.h>
#include <l4/sys/compiler.h>
#include <l4/sys/l4int.h>

```

Include dependency graph for utcb.h:

This graph shows which files directly or indirectly include this file:

Data Structures

- union [l4_msg_regs_t](#)
Encapsulation of the message-register block in the UTCB.
- struct [l4_buf_regs_t](#)
Encapsulation of the buffer-registers block in the UTCB.
- struct [l4_thread_regs_t](#)
Encapsulation of the thread-control-register block of the UTCB.

Typedefs

- typedef struct [l4_utcb_t](#) [l4_utcb_t](#)
Opaque type for the UTCB.
- typedef union [l4_msg_regs_t](#) [l4_msg_regs_t](#)
Encapsulation of the message-register block in the UTCB.
- typedef struct [l4_buf_regs_t](#) [l4_buf_regs_t](#)
Encapsulation of the buffer-registers block in the UTCB.
- typedef struct [l4_thread_regs_t](#) [l4_thread_regs_t](#)
Encapsulation of the thread-control-register block of the UTCB.

Functions

- [l4_utcb_t](#) * [l4_utcb](#) (void) [L4_NOTHROW](#) [L4_PURE](#)
Get the UTCB address.
- [l4_msg_regs_t](#) * [l4_utcb_mr](#) (void) [L4_NOTHROW](#) [L4_PURE](#)
Get the message-register block of a UTCB.
- [l4_buf_regs_t](#) * [l4_utcb_br](#) (void) [L4_NOTHROW](#) [L4_PURE](#)
Get the buffer-register block of a UTCB.
- [l4_thread_regs_t](#) * [l4_utcb_tcr](#) (void) [L4_NOTHROW](#) [L4_PURE](#)
Get the thread-control-register block of a UTCB.
- [l4_exc_regs_t](#) * [l4_utcb_exc](#) (void) [L4_NOTHROW](#) [L4_PURE](#)
Get the message-register block of a UTCB (for an exception IPC).
- [l4_umword_t](#) [l4_utcb_exc_pc](#) ([l4_exc_regs_t](#) const *u) [L4_NOTHROW](#) [L4_PURE](#)
Access function to get the program counter of the exception state.
- void [l4_utcb_exc_pc_set](#) ([l4_exc_regs_t](#) *u, [l4_addr_t](#) pc) [L4_NOTHROW](#)
Set the program counter register in the exception state.
- unsigned long [l4_utcb_exc_typeval](#) ([l4_exc_regs_t](#) const *u) [L4_NOTHROW](#) [L4_PURE](#)
Get the value out of an exception UTCB that describes the type of exception.
- int [l4_utcb_exc_is_pf](#) ([l4_exc_regs_t](#) const *u) [L4_NOTHROW](#) [L4_PURE](#)
Check whether an exception IPC is a page fault.
- [l4_addr_t](#) [l4_utcb_exc_pfa](#) ([l4_exc_regs_t](#) const *u) [L4_NOTHROW](#) [L4_PURE](#)
Function to get the L4 style page fault address out of an exception.
- int [l4_utcb_exc_is_ex_regs_exception](#) ([l4_exc_regs_t](#) const *u) [L4_NOTHROW](#) [L4_PURE](#)
Check whether an exception IPC was triggered via [l4_thread_ex_regs\(\)](#).
- void [l4_utcb_inherit_fpu](#) (int switch_on) [L4_NOTHROW](#)
Enable or disable inheritance of FPU state to receiver.
- [l4_timeout_s](#) [l4_timeout_abs](#) ([l4_kernel_clock_t](#) pint, int br) [L4_NOTHROW](#)
Set an absolute timeout.
- unsigned [l4_utcb_mr64_idx](#) (unsigned idx) [L4_NOTHROW](#)
Get index into 64bit message registers alias from native-sized index.

17.576 x86/I4/sys/utcb.h File Reference

UTCB definitions for x86.

```
#include <l4/sys/types.h>
```

Include dependency graph for utcb.h:

Data Structures

- struct [l4_exc_regs_t](#)
UTCB structure for exceptions.

Typedefs

- typedef struct [l4_exc_regs_t](#) [l4_exc_regs_t](#)
UTCB structure for exceptions.

Enumerations

- enum [L4_utcb_consts_x86](#) {
[L4_UTCB_EXCEPTION_REGS_SIZE](#) = 19 , [L4_UTCB_GENERIC_DATA_SIZE](#) = 63 , [L4_UTCB_GENERIC_BUFFERS_SIZE](#) = 58 , [L4_UTCB_MSG_REGS_OFFSET](#) = 0 ,
[L4_UTCB_BUF_REGS_OFFSET](#) = 64 * sizeof([l4_umword_t](#)) , [L4_UTCB_THREAD_REGS_OFFSET](#) = 123 * sizeof([l4_umword_t](#)) , [L4_UTCB_INHERIT_FPU](#) = 1UL << 24 , [L4_UTCB_OFFSET](#) = 512 }
UTCB constants for x86.

Functions

- [l4_umword_t](#) [l4_utcb_exc_pc](#) ([l4_exc_regs_t](#) const *u) [L4_NOTHROW](#)
Access function to get the program counter of the exception state.
- void [l4_utcb_exc_pc_set](#) ([l4_exc_regs_t](#) *u, [l4_addr_t](#) pc) [L4_NOTHROW](#)
Set the program counter register in the exception state.
- [l4_umword_t](#) [l4_utcb_exc_typeval](#) ([l4_exc_regs_t](#) const *u) [L4_NOTHROW](#)

Get the value out of an exception UTCB that describes the type of exception.

- `int l4_utcb_exc_is_pf (l4_exc_regs_t const *u) L4_NOTHROW`

Check whether an exception IPC is a page fault.

- `l4_addr_t l4_utcb_exc_pfa (l4_exc_regs_t const *u) L4_NOTHROW`

Function to get the L4 style page fault address out of an exception.

- `int l4_utcb_exc_is_ex_regs_exception (l4_exc_regs_t const *u) L4_NOTHROW`

Check whether an exception IPC was triggered via `l4_thread_ex_regs()`.

```

Include dependency graph for vcon.h:

This graph shows which files directly or indirectly include this file:

Data Structures

- struct `l4_vcon_attr_t`
Vcon attribute structure.

Typedefs

- typedef struct `l4_vcon_attr_t` `l4_vcon_attr_t`
Vcon attribute structure.

Enumerations

- enum `L4_vcon_size_consts` { `L4_VCON_WRITE_SIZE` = (L4_UTCB_GENERIC_DATA_SIZE - 2) * sizeof(l4_umword_t) , `L4_VCON_READ_SIZE` = (L4_UTCB_GENERIC_DATA_SIZE - 1) * sizeof(l4_umword_t) }
Size constants.
- enum `L4_vcon_read_flags` { `L4_VCON_READ_SIZE_MASK` = 0x3ffffff , `L4_VCON_READ_STAT_BREAK` = 1 << 30 , `L4_VCON_READ_STAT_DONE` = 1 << 31 }
Vcon read flags.
- enum `L4_vcon_i_flags` { `L4_VCON_INLCR` = 000100 , `L4_VCON_IGNCR` = 000200 , `L4_VCON_ICRNL` = 000400 }
Input flags.
- enum `L4_vcon_o_flags` { `L4_VCON_ONLCR` = 000004 , `L4_VCON_OCRNL` = 000010 , `L4_VCON_ONLRET` = 000040 }
Output flags.
- enum `L4_vcon_l_flags` { `L4_VCON_ICANON` = 000002 , `L4_VCON_ECHO` = 000010 }
Local flags.
- enum `L4_vcon_ops` { `L4_VCON_WRITE_OP` = 0UL , `L4_VCON_READ_OP` = 1UL , `L4_VCON_SET_ATTR_OP` = 2UL , `L4_VCON_GET_ATTR_OP` = 3UL }
Operations on vcon objects.

Functions

- `l4_msgtag_t l4_vcon_send` (l4_cap_idx_t vcon, char const *buf, unsigned size) `L4_NOTHROW`
Send data to virtual console.
- `l4_msgtag_t l4_vcon_send_u` (l4_cap_idx_t vcon, char const *buf, unsigned size, l4_utcb_t *utcb) `L4_NOTHROW`
*Send data to *this* virtual console.*
- `long l4_vcon_write` (l4_cap_idx_t vcon, char const *buf, unsigned size) `L4_NOTHROW`
Write data to virtual console.
- `long l4_vcon_write_u` (l4_cap_idx_t vcon, char const *buf, unsigned size, l4_utcb_t *utcb) `L4_NOTHROW`
*Write data to *this* virtual console.*
- `int l4_vcon_read` (l4_cap_idx_t vcon, char *buf, unsigned size) `L4_NOTHROW`
Read data from virtual console.
- `int l4_vcon_read_u` (l4_cap_idx_t vcon, char *buf, unsigned size, l4_utcb_t *utcb) `L4_NOTHROW`
*Read data from *this* virtual console.*
- `int l4_vcon_read_with_flags` (l4_cap_idx_t vcon, char *buf, unsigned size) `L4_NOTHROW`
Read data from virtual console, extended version including flags.
- `l4_msgtag_t l4_vcon_set_attr` (l4_cap_idx_t vcon, l4_vcon_attr_t const *attr) `L4_NOTHROW`
Set attributes of a Vcon.
- `l4_msgtag_t l4_vcon_set_attr_u` (l4_cap_idx_t vcon, l4_vcon_attr_t const *attr, l4_utcb_t *utcb) `L4_NOTHROW`
*Set the attributes of *this* virtual console.*
- `l4_msgtag_t l4_vcon_get_attr` (l4_cap_idx_t vcon, l4_vcon_attr_t *attr) `L4_NOTHROW`
Get attributes of a Vcon.
- `l4_msgtag_t l4_vcon_get_attr_u` (l4_cap_idx_t vcon, l4_vcon_attr_t *attr, l4_utcb_t *utcb) `L4_NOTHROW`
*Get attributes of *this* virtual console.*
- `void l4_vcon_set_attr_raw` (l4_vcon_attr_t *attr) `L4_NOTHROW`
Set terminal attributes to disable all special processing.

17.580.1 Detailed Description

Virtual console interface.

Definition in file [vcon.h](#).

17.580.2 Enumeration Type Documentation

17.580.2.1 L4_vcon_read_flags

```
enum L4_vcon_read_flags
```

Vcon read flags.

Enumerator

| | |
|-------------------------|-----------------------|
| L4_VCON_READ_SIZE_MASK | Size mask. |
| L4_VCON_READ_STAT_BREAK | Break condition flag. |
| L4_VCON_READ_STAT_DONE | Done condition flag. |

Macros

- `#define l4_assert(expr)`
Low-level assert.

17.589.1 Detailed Description

Low-level assert implementation.

Definition in file [assert.h](#).

17.589.2 Macro Definition Documentation

17.589.2.1 l4_assert

```
#define l4_assert(  
    expr )
```

Value:

```
l4_assert_fn(!(expr), __FILE__ ":" L4_stringify(__LINE__) ": Assertion \"" \
    L4_stringify(expr) "\" failed.\n")
```

Low-level assert.

Parameters

| | |
|-------------|--|
| <i>expr</i> | Expression to be evaluate for the assertion. |
|-------------|--|

This assertion is a low-level implementation that directly uses kernel primitives. Only use [l4_assert\(\)](#) when the standard `assert()` functionality is not available.

Definition at line 32 of file [assert.h](#).

Include dependency graph for bitops.h:

This graph shows which files directly or indirectly include this file:

Macros

- `#define l4util_test_and_clear_bit(b, dest) l4util_btr(b, dest)`
define some more usual names

Functions

- void [l4util_set_bit](#) (int b, volatile [l4_umword_t](#) *dest)
Set bit in memory.
- void [l4util_clear_bit](#) (int b, volatile [l4_umword_t](#) *dest)
Clear bit in memory.
- void [l4util_complement_bit](#) (int b, volatile [l4_umword_t](#) *dest)
Complement bit in memory.
- int [l4util_test_bit](#) (int b, const volatile [l4_umword_t](#) *dest)
Test bit (return value of bit)
- int [l4util_bts](#) (int b, volatile [l4_umword_t](#) *dest)
Bit test and set.
- int [l4util_btr](#) (int b, volatile [l4_umword_t](#) *dest)
Bit test and reset.
- int [l4util_btc](#) (int b, volatile [l4_umword_t](#) *dest)
Bit test and complement.
- int [l4util_bsr](#) ([l4_umword_t](#) word)
Bit scan reverse.
- int [l4util_bsf](#) ([l4_umword_t](#) word)
Bit scan forward.
- int [l4util_find_first_set_bit](#) (const void *dest, [l4_size_t](#) size)
Find the first set bit in a memory region.
- int [l4util_find_first_zero_bit](#) (const void *dest, [l4_size_t](#) size)
Find the first zero bit in a memory region.
- int [l4util_next_power2](#) (unsigned long val)
Find the next power of 2 for a given number.

17.604.1 Detailed Description

ELF definition.

Date

08/18/2000

Author

Frank Mehnert fm3@os.inf.tu-dresden.de Alexander Warg awl1@os.inf.tu-dresden.de

Many structs from "Executable and Linkable Format (ELF)", Portable Formats Specification, Version 1.1 and "System V Application Binary Interface - DRAFT - April 29, 1998" The Santa Cruz Operation, Inc. (see <http://www.sco.com/developer/gabi/contents.html>)

Definition in file [elf.h](#).

17.605 elf.h

17.610 l4/sys/kip.h File Reference

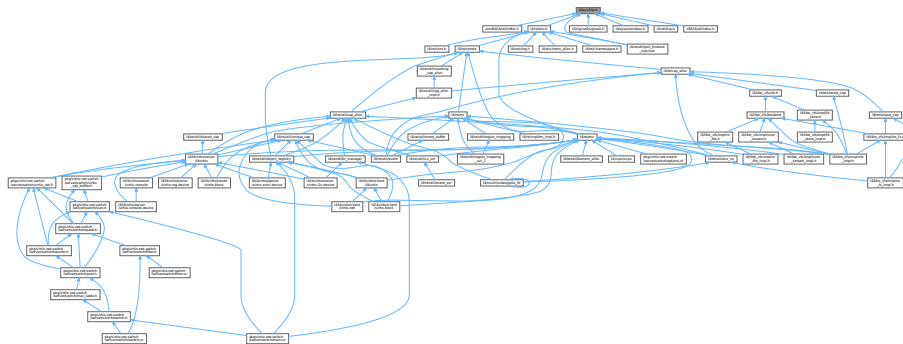

Kernel Info Page access functions.

```
#include <l4/sys/compiler.h>
#include <l4/sys/l4int.h>
```

```
#include <l4/sys/__kip-arch.h>
#include <l4/sys/__kip-64bit.h>
Include dependency graph for kip.h:
```

This graph shows which files directly or indirectly include this file:

Macros

- `#define L4_KERNEL_INFO_MAGIC (0x4BE6344CL) /* "L4μK" */`
Kernel Info Page identifier ("L4μK").
- `#define l4_kip_for_each_feature(s) for (s += __builtin_strlen(s) + 1; *s; s += __builtin_strlen(s) + 1)`
Cycle through kernel features given in the KIP.

Enumerations

- `enum { L4_KIP_OFFS_READ_US = 0x900, L4_KIP_OFFS_READ_NS = 0x980 }`

Functions

- [l4_kernel_info_t](#) const * [l4_kip](#) (void) [L4_NOTHROW](#)
Get Kernel Info Page.
- [l4_umword_t](#) [l4_kip_version](#) ([l4_kernel_info_t](#) const *kip) [L4_NOTHROW](#)
Get the kernel version.
- const char * [l4_kip_version_string](#) ([l4_kernel_info_t](#) const *kip) [L4_NOTHROW](#)
Get the kernel version string.
- int [l4_kernel_info_version_offset](#) ([l4_kernel_info_t](#) const *kip) [L4_NOTHROW](#)
Return offset in bytes of version_strings relative to the KIP base.
- [l4_cpu_time_t](#) [l4_kip_clock](#) ([l4_kernel_info_t](#) const *kip) [L4_NOTHROW](#)
Return clock value from the KIP.
- [l4_umword_t](#) [l4_kip_clock_lw](#) ([l4_kernel_info_t](#) const *kip) [L4_NOTHROW](#)
Return least significant machine word of clock value from the KIP.
- [l4_uint64_t](#) [l4_kip_clock_ns](#) ([l4_kernel_info_t](#) const *kip) [L4_NOTHROW](#)
Return current clock using the KIP in nanoseconds.
- int [l4_kip_kernel_has_feature](#) ([l4_kernel_info_t](#) const *kip, char const *str)
Check if kernel supports a feature.

17.610.1 Detailed Description

Kernel Info Page access functions.

Definition in file [kip.h](#).

17.610.2 Macro Definition Documentation

17.610.2.1 l4_kip_for_each_feature

```
#define l4_kip_for_each_feature(  
    s )    for (s += __builtin_strlen(s) + 1; *s; s += __builtin_strlen(s) + 1)
```

Cycle through kernel features given in the KIP.

Cycles through all KIP kernel feature strings. *s* must be a character pointer (`char const *`) initialized with [l4_kip_version_string\(\)](#).

Definition at line 230 of file [kip.h](#).

17.610.3 Function Documentation

17.610.3.1 l4_kip_kernel_has_feature()

```
int l4_kip_kernel_has_feature (  
    l4\_kernel\_info\_t const * kip,  
    char const * str ) [inline]
```

Check if kernel supports a feature.

Parameters

| | |
|------------|--|
| <i>kip</i> | Pointer to the kernel info page (KIP). |
| <i>str</i> | Feature name to check. |

Returns

1 if the kernel supports the feature, 0 if not.

Checks the feature field in the KIP for the given string.

Definition at line 244 of file [kip.h](#).

References [l4_kip_for_each_feature](#), and [l4_kip_version_string\(\)](#).

Here is the call graph for this function:

```

Include dependency graph for list_alloc.h:

Functions

- void `l4la_free` (`l4la_free_t **first`, void `*block`, `l4_size_t` `size`)
Add free memol. to memory pool.
- void * `l4la_alloc` (`l4la_free_t **first`, `l4_size_t` `size`, unsigned `align`)
Allocate memory from pool.
- void `l4la_dump` (`l4la_free_t **first`)
Show all list members.
- void `l4la_init` (`l4la_free_t **first`)
Init memory pool.
- `l4_size_t` `l4la_avail` (`l4la_free_t **first`)
Show available memory in pool.

17.618.1 Detailed Description

Simple list-based allocator.

Taken from the Fiasco kernel.

Date

Alexander Warg <aw11os.inf.tu-dresden.de> Frank Mehnert fm3@os.inf.tu-dresden.de

Definition in file [list_alloc.h](#).

17.618.2 Function Documentation

17.618.2.1 l4la_alloc()

```
void * l4la_alloc (
    l4la_free_t ** first,
    l4_size_t size,
    unsigned align )
```

Allocate memory from pool.

Parameters

| | |
|--------------|------------------------------------|
| <i>first</i> | list identifier |
| <i>size</i> | length of memory block to allocate |
| <i>align</i> | alignment |

17.618.2.2 l4la_avail()

```
l4_size_t l4la_avail (
    l4la_free_t ** first )
```

Show available memory in pool.

Parameters

| | |
|--------------|-----------------|
| <i>first</i> | list identifier |
|--------------|-----------------|

17.618.2.3 l4la_dump()

```
void l4la_dump (
    l4la_free_t ** first )
```

Show all list members.

Parameters

| | |
|--------------|-----------------|
| <i>first</i> | list identifier |
|--------------|-----------------|

17.618.2.4 l4la_free()

```
void l4la_free (
    l4la_free_t ** first,
    void * block,
    l4_size_t size )
```

Add free memory to memory pool.

Parameters

| | |
|--------------|--------------------------------|
| <i>first</i> | list identifier |
| <i>block</i> | address of unused memory block |
| <i>size</i> | size of memory block |

17.618.2.5 l4la_init()

```
void l4la_init (
    l4la_free_t ** first )
```

Init memory pool.

Parameters

| | |
|--------------|-----------------|
| <i>first</i> | list identifier |
|--------------|-----------------|

- #define [L4UTIL_MB_APM_TABLE](#) 0x00000400
Is there a APM table?
- #define [L4UTIL_MB_VIDEO_INFO](#) 0x00000800
Is there video information?
- #define [L4UTIL_MB_VALID](#) 0x2BADB002UL
If we are multiboot-compliant, this value is present in the eax register.

17.622.1 Detailed Description

Multiboot info structure as defined by GRUB.

Definition in file [mb_info.h](#).

17.622.2 Macro Definition Documentation

17.622.2.1 l4util_mb_for_each_mmap_entry

```
#define l4util_mb_for_each_mmap_entry(  
    i,  
    mbi )
```

Value:

```
for (i = l4util_mb_first_mmap_entry(mbi);  
      (unsigned long)i < (unsigned long)mbi->mmap_addr + mbi->mmap_length;  
      i = l4util_mb_next_mmap_entry(i)) \
```

Iterate over a memory map provided in a Multiboot info.

Parameters

| | |
|------------|---|
| <i>i</i> | Name of a variable of type l4util_mb_addr_range_t * that is consecutively assigned pointers to the entries of the memory map. |
| <i>mbi</i> | Pointer to the l4util_mb_info_t where the memory map can be found. |

Definition at line 332 of file [mb_info.h](#).

17.622.2.2 L4UTIL_MB_MEMORY

```
#define L4UTIL_MB_MEMORY 0x00000001
```

Flags to be set in the 'flags' parameter above.

is there basic lower/upper memory information?

Definition at line 344 of file [mb_info.h](#).

comfortable command-line parsing

```

#include <stdarg.h>
#include <l4/sys/compiler.h>

```

Include dependency graph for parse_cmd.h:

Typedefs

- typedef void(* **parse_cmd_fn_t**) (int)
Function type for PARSE_CMD_FN.
- typedef void(* **parse_cmd_fn_arg_t**) (int, const char *, int)
Function type for PARSE_CMD_FN_ARG.

Enumerations

- enum **parse_cmd_type**
Types for parsing.

Functions

- int **parse_cmdline** (int *argc, const char ***argv, int arg0,...)
Parse the command-line for specified arguments and store the values into variables.

17.624.1 Detailed Description

comfortable command-line parsing

Flags for the thread ex-regs operation.

Functions

- `l4_msgtag_t l4_thread_ex_regs` (`l4_cap_idx_t` thread, `l4_addr_t` ip, `l4_addr_t` sp, `l4_umword_t` flags)
`L4_NOTHROW`
Exchange basic thread registers.
- `l4_msgtag_t l4_thread_ex_regs_u` (`l4_cap_idx_t` thread, `l4_addr_t` ip, `l4_addr_t` sp, `l4_umword_t` flags,
`l4_utcb_t` *utcb) `L4_NOTHROW`
Exchange basic thread registers.
- `l4_msgtag_t l4_thread_ex_regs_ret` (`l4_cap_idx_t` thread, `l4_addr_t` *ip, `l4_addr_t` *sp, `l4_umword_t` *flags)
`L4_NOTHROW`
Exchange basic thread registers and return previous values.
- `l4_msgtag_t l4_thread_ex_regs_ret_u` (`l4_cap_idx_t` thread, `l4_addr_t` *ip, `l4_addr_t` *sp, `l4_umword_t`
*flags, `l4_utcb_t` *utcb) `L4_NOTHROW`
Exchange basic thread registers and return previous values.
- void `l4_thread_control_start` (void) `L4_NOTHROW`
Start a thread control API sequence.
- void `l4_thread_control_pager` (`l4_cap_idx_t` pager) `L4_NOTHROW`
Set the pager.
- void `l4_thread_control_exc_handler` (`l4_cap_idx_t` exc_handler) `L4_NOTHROW`
Set the exception handler.
- void `l4_thread_control_bind` (`l4_utcb_t` *thread_utcb, `l4_cap_idx_t` task) `L4_NOTHROW`
Bind the thread to a task.
- void `l4_thread_control_alien` (int on) `L4_NOTHROW`
Enable alien mode.
- `l4_msgtag_t l4_thread_control_commit` (`l4_cap_idx_t` thread) `L4_NOTHROW`
Commit the thread control parameters.

- [l4_msgtag_t l4_thread_yield](#) (void) L4_NOTHROW
Yield current time slice.
- [l4_msgtag_t l4_thread_switch](#) (l4_cap_idx_t to_thread) L4_NOTHROW
Switch to another thread (and donate the remaining time slice).
- [l4_msgtag_t l4_thread_stats_time](#) (l4_cap_idx_t thread, l4_kernel_clock_t *us) L4_NOTHROW
Get consumed time of thread in μ s.
- [l4_msgtag_t l4_thread_vcpu_resume_start](#) (void) L4_NOTHROW
vCPU return from event handler.
- [l4_msgtag_t l4_thread_vcpu_resume_commit](#) (l4_cap_idx_t thread, l4_msgtag_t tag) L4_NOTHROW
Commit vCPU resume.
- [l4_msgtag_t l4_thread_vcpu_control](#) (l4_cap_idx_t thread, l4_addr_t vcpu_state) L4_NOTHROW
Enable the vCPU feature for the thread.
- [l4_msgtag_t l4_thread_vcpu_control_u](#) (l4_cap_idx_t thread, l4_addr_t vcpu_state, l4_utcb_t *utcb) L4_NOTHROW
Enable the vCPU feature for the thread.
- [l4_msgtag_t l4_thread_vcpu_control_ext](#) (l4_cap_idx_t thread, l4_addr_t ext_vcpu_state) L4_NOTHROW
Enable the extended vCPU feature for the thread.
- [l4_msgtag_t l4_thread_vcpu_control_ext_u](#) (l4_cap_idx_t thread, l4_addr_t ext_vcpu_state, l4_utcb_t *utcb) L4_NOTHROW
Enable the extended vCPU feature for the thread.
- [l4_msgtag_t l4_thread_register_del_irq](#) (l4_cap_idx_t thread, l4_cap_idx_t irq) L4_NOTHROW
Register an IRQ that will trigger upon deletion events.
- [l4_msgtag_t l4_thread_modify_sender_start](#) (void) L4_NOTHROW
Start a thread sender modification sequence.
- [int l4_thread_modify_sender_add](#) (l4_umword_t match_mask, l4_umword_t match, l4_umword_t del_bits, l4_umword_t add_bits, l4_msgtag_t *tag) L4_NOTHROW
Add a modification pattern to a sender modification sequence.
- [l4_msgtag_t l4_thread_modify_sender_commit](#) (l4_cap_idx_t thread, l4_msgtag_t tag) L4_NOTHROW
Apply (commit) a sender modification sequence.
- [l4_msgtag_t l4_thread_register_doorbell_irq](#) (l4_cap_idx_t thread, l4_cap_idx_t irq) L4_NOTHROW
Register an IRQ that will trigger when a forwarded virtual interrupt is pending.

17.636 l4/util/thread.h File Reference

Low-level Thread Functions.

```

#include <l4/sys/types.h>
#include <l4/sys/scheduler.h>

```

Include dependency graph for thread.h:

Macros

- `#define __L4UTIL_THREAD_FUNC(name) void L4_NORETURN name(void)`
Defines a wrapper function that sets up the registers according to the calling conventions for the architecture.

17.636.1 Detailed Description

Low-level Thread Functions.

Date

1997

Author

Sebastian Schönberg

Definition in file [thread.h](#).

17.636.2 Macro Definition Documentation

17.636.2.1 __L4UTIL_THREAD_FUNC

```
#define __L4UTIL_THREAD_FUNC(  
    name ) void L4_NORETURN name(void)
```

Defines a wrapper function that sets up the registers according to the calling conventions for the architecture.

Use this as a function header when starting a low-level thread where only stack and instruction pointer are in a well-defined state.

Example:

```
L4UTIL_THREAD_FUNC(helper_thread) { l4_infinite_loop(); }
```

```
thread_cap->ex_regs((l4_umword_t)helper_thread, stack_addr);
```

- enum { `L4VBUS_NULL` = -1L , `L4VBUS_ROOT_BUS` = 0 }
Constants for device nodes.
- enum `l4vbus_icu_src_types` { `L4VBUS_ICU_SRC_DEV_HANDLE` = 1ULL << 63 }
Flags that can be used with the ICU on a vbus device.
- enum `L4vbus_dma_domain_assign_flags` { `L4VBUS_DMAD_UNBIND` = 0 , `L4VBUS_DMAD_BIND` = 1 , `L4VBUS_DMAD_L4RE_DMA_SPACE` = 0 , `L4VBUS_DMAD_KERNEL_DMA_SPACE` = 2 }
Flags for `l4vbus_assign_dma_domain()`.

Functions

- int `l4vbus_get_device_by_hid` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` parent, `l4vbus_device_handle_t` *child, char const *hid, int depth, `l4vbus_device_t` *devinfo)
Find a device by the hardware interface identifier (HID).
- int `l4vbus_get_next_device` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` parent, `l4vbus_device_handle_t` *child, int depth, `l4vbus_device_t` *devinfo)
Find next child following `child`.
- int `l4vbus_get_device` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` dev, `l4vbus_device_t` *devinfo)
Obtain detailed information about a Vbus device.
- int `l4vbus_get_resource` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` dev, unsigned res_idx, `l4vbus_resource_t` *res)
Obtain the resource description of an individual device resource.
- int `l4vbus_is_compatible` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` dev, char const *cid)
Check if the given device has a compatibility ID (CID) or HID that matches `cid`.
- int `l4vbus_get_hid` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` dev, char *hid, unsigned long max_len)
Get the HID (hardware identifier) of a device.
- int `l4vbus_get_adr` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` dev, `l4_uint32_t` *adr)
Get the bus-specific address of a device.
- int `l4vbus_request_ioport` (`l4_cap_idx_t` vbus, `l4vbus_resource_t` const *res)
Request an IO port resource.
- int `l4vbus_assign_dma_domain` (`l4_cap_idx_t` vbus, unsigned domain_id, unsigned flags, `l4_cap_idx_t` dma_space)
Bind or unbind a kernel DMA space or a L4Re::Dma_space to a DMA domain.
- int `l4vbus_release_ioport` (`l4_cap_idx_t` vbus, `l4vbus_resource_t` const *res)
Release a previously requested IO port resource.
- int `l4vbus_vicu_get_cap` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` icu, `l4_cap_idx_t` cap)
Get capability of ICU.

17.640.1 Detailed Description

Description of the vbus C API.

Definition in file [vbus.h](#).

17.640.2 Enumeration Type Documentation

17.640.2.1 anonymous enum

anonymous enum

Constants for device nodes.

Enumerator

| | |
|-----------------|--------------------------|
| L4VBUS_NULL | NULL device. |
| L4VBUS_ROOT_BUS | Root device on the vbus. |

Definition at line 20 of file [vbus.h](#).

17.640.2.2 l4vbus_icu_src_types

```
enum l4vbus_icu_src_types
```

Flags that can be used with the ICU on a vbus device.

Enumerator

| | |
|---------------------------|--|
| L4VBUS_ICU_SRC_DEV_HANDLE | Flag to denote that the value should be interpreted as a device handle. This flag may be used in the <code>source</code> parameter in <code>l4_icu_msi_info()</code> to denote that the ICU should interpret the source ID as a device handle. |
|---------------------------|--|

Definition at line 26 of file [vbus.h](#).

17.641 vbus.h

17.648 I4/vbus/vbus_interfaces.h File Reference

This header contains the definition of VBUS sub-interfaces and convenience functions to work with the interface IDs.

```
#include <l4/sys/types.h>
```

Include dependency graph for vbus_interfaces.h:

This graph shows which files directly or indirectly include this file:

Typedefs

- typedef enum `I4vbus_iface_type_t` `I4vbus_iface_type_t`
Different sub-interfaces a vbus device may support.

Enumerations

- enum `I4vbus_iface_type_t` {
`L4VBUS_INTERFACE_ICU` = 0, `L4VBUS_INTERFACE_GPIO`, `L4VBUS_INTERFACE_PCI`, `L4VBUS_INTERFACE_PCIDEV`,
`L4VBUS_INTERFACE_PM`, `L4VBUS_INTERFACE_BUS`, `L4VBUS_INTERFACE_GENERIC` = 0x20 }
Different sub-interfaces a vbus device may support.
- enum { `L4VBUS_IFACE_SHIFT` = 26 }

Functions

- unsigned **l4vbus_subinterface** (unsigned opcode)
Return the ID of the vbus sub-interface.
- unsigned **l4vbus_interface_opcode** (unsigned opcode)
Return the function opcode within the sub-interface of the vbus command.
- int **l4vbus_subinterface_supported** (l4_uint32_t dev_type, l4vbus_iface_type_t iface_type)
Check if a vbus device supports a given sub-interface.

17.648.1 Detailed Description

This header contains the definition of VBUS sub-interfaces and convenience functions to work with the interface IDs.

Definition in file [vbus_interfaces.h](#).

17.648.2 Typedef Documentation

17.648.2.1 l4vbus_iface_type_t

```
typedef enum l4vbus_iface_type_t l4vbus_iface_type_t
```

Different sub-interfaces a vbus device may support.

The IPC interface of vbus devices is divided into functional groups of sub-interfaces. Every device must implement the generic interface which provides general device information. According to the type of device, additional functionality may be supported.

The sub-interface constants are first of all used to divide the function opcode space of the interface into these functional groups (see L4VBUS_IFACE_SHIFT). They also make up a bitmask that specify the type of the device, i.e. from the point of view of the client a device is defined by the kinds of sub-interfaces it supports.

17.648.3 Enumeration Type Documentation

17.648.3.1 anonymous enum

```
anonymous enum
```

Enumerator

| | |
|--------------------|---|
| L4VBUS_IFACE_SHIFT | Sub-interface ID shift. Divides the function opcode sent via IPC into a sub-interface ID and the actual function opcode within the sub-interface. |
|--------------------|---|

Definition at line 48 of file [vbus_interfaces.h](#).

17.648.3.2 l4vbus_iface_type_t

```
enum l4vbus_iface_type_t
```

Different sub-interfaces a vbus device may support.

The IPC interface of vbus devices is divided into functional groups of sub-interfaces. Every device must implement the generic interface which provides general device information. According to the type of device, additional functionality may be supported.

The sub-interface constants are first of all used to divide the function opcode space of the interface into these functional groups (see L4VBUS_IFACE_SHIFT). They also make up a bitmask that specify the type of the device, i.e. from the point of view of the client a device is defined by the kinds of sub-interfaces it supports.

Enumerator

| L4VBUS_INTERFACE_GPIO | GPIO. |
| L4VBUS_INTERFACE_PCI | PCI. |
| L4VBUS_INTERFACE_PCIDEV | PCI Device. |
| L4VBUS_INTERFACE_PM | Power Management. |
| L4VBUS_INTERFACE_BUS | VBus. |
| L4VBUS_INTERFACE_GENERIC | No specific sub interface. |

Definition at line 29 of file [vbus_interfaces.h](#).

17.648.4 Function Documentation

17.648.4.1 l4vbus_subinterface_supported()

```
int l4vbus_subinterface_supported (
    l4_uint32_t dev_type,
    l4vbus_iface_type_t iface_type ) [inline]
```

Check if a vbus device supports a given sub-interface.

Parameters

| | |
|-------------------|--|
| <i>dev_type</i> | Device type as reported in l4vbus_device_t . |
| <i>iface_type</i> | Sub-interface type to check for. |

Returns

True if the device supports the sub-interface.

Definition at line 99 of file [vbus_interfaces.h](#).

vCPU API

```

#include <l4/sys/types.h>
#include <l4/sys/__vcpu-arch.h>

```

Include dependency graph for vcpu.h:

This graph shows which files directly or indirectly include this file:

Data Structures

- struct `l4_vcpu_state_t`
State of a vCPU.

Typedefs

- typedef struct `l4_vcpu_state_t` `l4_vcpu_state_t`
State of a vCPU.

Enumerations

- enum [L4_vcpu_state_flags](#) {
[L4_VCPU_F_IRQ](#) = 0x01 , [L4_VCPU_F_PAGE_FAULTS](#) = 0x02 , [L4_VCPU_F_EXCEPTIONS](#) = 0x04 ,
[L4_VCPU_F_USER_MODE](#) = 0x20 ,
[L4_VCPU_F_FPU_ENABLED](#) = 0x80 }
State flags of a vCPU.
- enum [L4_vcpu_sticky_flags](#) { [L4_VCPU_SF_IRQ_PENDING](#) = 0x01 }
Sticky flags of a vCPU.

Functions

- int [l4_vcpu_check_version](#) ([l4_vcpu_state_t](#) const *vcpu) [L4_NOTHROW](#)
Check if a vCPU state has the right version.

17.661.1 Detailed Description

vCPU API

Definition in file [vcpu.h](#).

17.661.2 Function Documentation

17.661.2.1 l4_vcpu_check_version()

```
int l4_vcpu_check_version (
    l4\_vcpu\_state\_t const * vcpu )    [inline]
```

Check if a vCPU state has the right version.

Parameters

| | |
|----------------------|---|
| vcpu | A pointer to an initialized vCPU state. |
|----------------------|---|

Return values

| | |
|---|--|
| 1 | If the vCPU state has a matching version ID for the current vCPU user-level structures. |
| 0 | If the vCPU state has a different (incompatible) version ID than the current vCPU user-level structures. |

Definition at line 191 of file [vcpu.h](#).

17.663 l4/vcpu/vcpu.h File Reference

vCPU support library (C interface).

```

#include <l4/sys/vcpu.h>
#include <l4/sys/utcb.h>
#include <l4/sys/ipc.h>
#include <l4/vcpu/vcpu_arch.h>

```

Include dependency graph for `vcpu.h`:

This graph shows which files directly or indirectly include this file:

Functions

- void `I4vcpu_irq_disable` (`I4_vcpu_state_t` *vcpu) `L4_NOTHROW`
Disable a vCPU for event delivery.
- unsigned `I4vcpu_irq_disable_save` (`I4_vcpu_state_t` *vcpu) `L4_NOTHROW`
Disable a vCPU for event delivery and return previous state.
- void `I4vcpu_irq_enable` (`I4_vcpu_state_t` *vcpu, `I4_utcb_t` *utcb, `I4vcpu_event_hndl_t` do_event_work_cb, `I4vcpu_setup_ipc_t` setup_ipc) `L4_NOTHROW`
Enable a vCPU for event delivery.
- void `I4vcpu_irq_restore` (`I4_vcpu_state_t` *vcpu, unsigned s, `I4_utcb_t` *utcb, `I4vcpu_event_hndl_t` do_event_work_cb, `I4vcpu_setup_ipc_t` setup_ipc) `L4_NOTHROW`
Restore a previously saved IRQ/event state.
- void `I4vcpu_wait_for_event` (`I4_vcpu_state_t` *vcpu, `I4_utcb_t` *utcb, `I4vcpu_event_hndl_t` do_event_work_cb, `I4vcpu_setup_ipc_t` setup_ipc) `L4_NOTHROW`

Wait for event.

- void `l4vcpu_print_state` (const `l4_vcpu_state_t` *vcpu, const char *prefix) `L4_NOTHROW`

Print the state of a vCPU.

- int `l4vcpu_is_irq_entry` (`l4_vcpu_state_t` const *vcpu) `L4_NOTHROW`

Return whether the entry reason was an IRQ/IPC message.

- int `l4vcpu_is_page_fault_entry` (`l4_vcpu_state_t` const *vcpu) `L4_NOTHROW`

Return whether the entry reason was a page fault.

- int `l4vcpu_ext_alloc` (`l4_vcpu_state_t` **vcpu, `l4_addr_t` *ext_state, `l4_cap_idx_t` task, `l4_cap_idx_t` regmgr) `L4_NOTHROW`

Allocate state area for an extended vCPU.

17.663.1 Detailed Description
